

Practice CMMC-CCA Test Online - New CMMC-CCA Test Fee

P.S. Free 2026 Cyber AB CMMC-CCA dumps are available on Google Drive shared by DumpsTests:
https://drive.google.com/open?id=1XXzKusBmKUg0YmZhmZKSWo8prZu_kCwp

We have experienced education technicians and stable first-hand information to provide you with high quality & efficient CMMC-CCA training dumps. If you are still worried about your exam, our exam dumps may be your good choice. Our CMMC-CCA training dumps cover nearly 85% real test materials so that if you master our dumps questions and answers you can clear exams successfully. Don't worry over trifles. If you purchase our CMMC-CCA training dumps you can spend your time on more significant work.

Cyber AB CMMC-CCA Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • CMMC Level 2 Assessment Scoping: This section of the exam measures skills of cybersecurity assessors and revolves around determining the proper scope of a CMMC assessment. It involves analyzing and categorizing Controlled Unclassified Information (CUI) assets, interpreting the Level 2 scoping guidelines, and making accurate judgments in scenario-based exercises to define what assets and systems fall within assessment boundaries.
Topic 2	<ul style="list-style-type: none"> • Assessing CMMC Level 2 Practices: This section of the exam measures skills of cybersecurity assessors in evaluating whether organizations meet the required practices of CMMC Level 2. It emphasizes applying CMMC model constructs, understanding model levels, domains, and implementation, and using evidence to determine compliance with established cybersecurity practices.
Topic 3	<ul style="list-style-type: none"> • CMMC Assessment Process (CAP): This section of the exam measures skills of compliance professionals and tests knowledge of the full assessment lifecycle. It covers the steps needed to plan, prepare, conduct, and report on a CMMC Level 2 assessment, including the phases of execution and how to document and follow up on findings in alignment with DoD and CMMC-AB expectations.
Topic 4	<ul style="list-style-type: none"> • Evaluating Organizations Seeking Certification (OSC) against CMMC Level 2 Requirements: This section of the exam measures skills of cybersecurity assessors and focuses on evaluating the environments of organizations seeking certification at CMMC Level 2. It covers understanding differences between logical and physical settings, recognizing constraints in cloud, hybrid, on-premises, single, and multi-site environments, and knowing what environmental exclusions apply for Level 2 assessments.

Cyber AB CMMC-CCA Desktop Practice Exam Software of DumpsTests

The software of CMMC-CCA guide torrent boosts varied self-learning and self-assessment functions to check the results of the learning. The software can help the learners find the weak links and deal with them. Our CMMC-CCA exam questions boost timing function and the function to stimulate the exam. Our product sets the timer to stimulate the exam to adjust the speed and keep alert. Our CMMC-CCA test torrents have simplified the complicated notions and add the instances, the stimulation and the diagrams to explain any hard-to-explain contents. So it is worthy for you to buy our CMMC-CCA exam questions.

Cyber AB Certified CMMC Assessor (CCA) Exam Sample Questions (Q34-Q39):

NEW QUESTION # 34

An OSC submits to the C3PAO Assessment Team for validation a CMMC assessment scope that includes an enclave. During validation, you learn that while CUI is stored on a single physical server, authorized employees can access it through virtual instances, thanks to VMware. You also determine that the OSC has deployed a DFARS-compliant firewall to protect network connections to the enclave and a VLAN to restrict communication between different portions of the network. Which method can the OSC be said to have used to secure its enclave?

- A. Virtualization
- B. Decentralization
- C. Physical separation
- **D. Segmentation**

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

The OSC uses VLANs and a firewall to restrict communication, which constitutes segmentation—a method to create logical barriers within a network to isolate the enclave. Physical separation (Option A) requires distinct hardware, not applicable here with a single server. Decentralization (Option C) involves distributed systems, not relevant. Virtualization (Option D) enables access via VMware but is not the security method.

Segmentation aligns with the CMMC and NIST SP 800-171 guidance for enclave protection.

Reference:

CMMC Assessment Scope - Level 2, Section 2.2 (Enclave Scoping), p. 4: "Segmentation uses VLANs and firewalls to isolate enclaves."

NEW QUESTION # 35

When discussing the OSC's proposed assessment scope, the Lead Assessor learned that some laptops and workstations share a network with CUI assets, but their users do not work with CUI. These assets do not store CUI or run applications that process CUI. Reviewing the OSC's SSP, the implemented risk-based security policies, procedures, and practices raised questions and were found to be deficient. What can the Lead Assessor do in this scenario?

- A. Advise the OSC PoC or Assessment Official to address the identified deficiencies.
- B. Validate the scope because the assets do not interact with CUI.
- C. Inform the C3PAO so as to obtain advice on the way forward.
- **D. Conduct a limited spot check to identify risks.**

Answer: D

Explanation:

Comprehensive and Detailed Explanation:

These laptops and workstations are Contractor Risk Managed Assets (CRMAs), as they can but are not intended to handle CUI due to policies. The CMMC Assessment Scope - Level 2 allows limited spot checks for CRMAs if SSP deficiencies raise concerns, ensuring risks are identified without expanding the assessment's scope significantly. Option A delays action, Option B shifts responsibility prematurely, and Option D ignores the deficiencies. C is correct.

Reference:

CMMC Assessment Scope - Level 2, Section 2.3.2 (CRMAs), p. 5: "Limited spot checks may be conducted for CRMAs if deficiencies are noted."

NEW QUESTION # 36

After a security audit, a contractor documents specific vulnerabilities and deficiencies in an audit report. After examining its POA&M, you realize it has a clearly defined policy on addressing these deficiencies and by when. However, after interviewing the contractor's security and compliance team, you learn that while an audit is regularly conducted, the remediating measures are not always taken, and when taken, they are not always practical. The security and compliance team informs you they have tried reaching the system administrator to explain the repercussions of this without success. What assessment objective has the contractor failed to implement from CMMC practice CA.L2-3.12.2 - Plan of Action?

- A. Implement a plan of action to correct the identified deficiencies and reduce or eliminate identified vulnerabilities that are ineffective
- B. The contractor has implemented all the assessment objectives in CA.L2-3.12.2 - Plan of Action
- C. Develop a change management plan that describes how to implement the remediation actions
- D. Identify the vulnerabilities and deficiencies that the plan of action will address

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:

CA.L2-3.12.2 requires "developing and implementing plans of action to correct deficiencies." Objectives include: [a] identifying deficiencies, and [c] implementing the POA&M to correct them. The contractor identifies issues (objective [a]), but fails to consistently implement remediation (C), per interview evidence, violating the practice's intent. A (all met) is false, B isn't an objective, and D is met.

Extract from Official CMMC Documentation:

* CMMC Assessment Guide Level 2 (v2.0), CA.L2-3.12.2: "[c] Implement POA&M to correct deficiencies; failure to act is non-compliant."

* NIST SP 800-171A, 3.12.2: "Verify implementation of remediation actions." Resources:

* https://dodcio.defense.gov/Portals/0/Documents/CMMC/AG_Level2_MasterV2.0_FINAL_202112016_508.pdf

NEW QUESTION # 37

You are the Lead Assessor of the Assessment Team conducting a CMMC Level 2 assessment for an OSC.

You have completed the first phase of the assessment process, which included the assessment kickoff meeting. Now, you are moving into the second phase, which involves collecting and examining evidence to determine the OSC's compliance with the CMMC practices. During the assessment, you find that the OSC has failed to meet the requirements for CMMC practice AU.L2-3.3.4 - Audit Failure Alerting. According to the CMMC Assessment Process (CAP), which of the following should be your next step?

- A. Immediately stop the assessment and report the failure to the C3PAO.
- B. Provide the OSC with a specific timeframe to remediate the failed practice.
- C. Evaluate the failed practice against the DoD Assessment Methodology and CMMC 2.0 POA&M scoring criteria.
- D. Mark the practice as "NOT MET" in the final assessment report without further action.

Answer: C

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The CAP requires evaluating a 'NOT MET' practice against DoD scoring and POA&M criteria to determine next steps, not stopping (Option A), marking without evaluation (Option B), or remediating during assessment (Option C). Option D is correct.

Extract from Official Document (CAP v1.0):

* Section 2.5 - Scoring (pg. 30): "Any practice scored as 'NOT MET' must be evaluated using the DoD Assessment Methodology against CMMC 2.0 POA&M scoring criteria." References:

CMMC Assessment Process (CAP) v1.0, Section 2.5.

NEW QUESTION # 38

The use of removable storage media remains a source of data breaches. The CMMC requires control of the use of removable media on system components. As a CCA, you can use different assessment methods to determine whether an OSC has met this requirement. What is the best assessment method to ascertain that MP.

L2-3.8.7[a] has been met?
