Elementary Workday-Prism-Analytics practice engine as representatives in the line are enjoying high reputation in the market rather than some useless practice materials which cash in on your worries. We can relieve you of uptight mood and serve as a considerate and responsible company with excellent Workday-Prism-Analytics Exam Questions which never shirks responsibility. It is easy to get advancement by our Workday-Prism-Analytics study materials. On the cutting edge of this line for over ten years, we are trustworthy company you can really count on.

Our website is here to provide you with the accurate Workday-Prism-Analytics real dumps in PDF and test engine mode. Using our latest Workday-Prism-Analytics training materials is the only fast way to clear the actual test because our test answers are approved by our experts. The content of our Workday-Prism-Analytics Braindumps Torrent is easy to understand that adapted to any level of candidates. It just needs few hours to your success.

Workday-Prism-Analytics Training For Exam - Workday-Prism-Analytics Simulated Test

Our Workday-Prism-Analytics exam prepare is definitely better choice to help you go through the test. Will you feel that the product you have brought is not suitable for you? One trait of our Workday-Prism-Analytics exam prepare is that you can freely download a demo to have a try. Because there are excellent free trial services provided by our Workday-Prism-Analytics exam guides, our products will provide three demos that specially designed to help you pick the one you are satisfied. The key trait of our product is that we keep pace with the changes of syllabus and the latest circumstance to revise and update our Workday-Prism-Analytics Study Materials, and we are available for one-year free updating to assure you of the reliability of our service.

Workday Pro Prism Analytics Exam Sample Questions (Q41-Q46):

NEW QUESTION # 41

You are adding a Join stage and choose Join type of Left Outer Join, causing Workday to search for a matching row in the imported pipeline. What happens if no matching rows exist?

- A. The row will be omitted.
- **B. Included fields from the imported pipeline will have NULL values.**
- C. A duplicate row will be generated.
- D. Included fields from both pipelines will have NULL values.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a Left Outer Join in a Join stage includes all rows from the primary pipeline (the left pipeline) and attempts to match them with rows from the imported pipeline (the right pipeline) based on the join condition. According to the official Workday Prism Analytics study path documents, if no matching rows exist in the imported pipeline for a given row in the primary pipeline, the row from the primary pipeline is still included in the output, but the fields from the imported pipeline will have NULL values. This behavior ensures that all data from the primary pipeline is retained, while the absence of a match in the imported pipeline is represented by NULLs for the corresponding fields.

The other options are incorrect:

- * A. A duplicate row will be generated: A Left Outer Join does not generate duplicate rows; duplicates would occur only if multiple matches exist in the imported pipeline, which is not the case here.
- * B. The row will be omitted: In a Left Outer Join, rows from the primary pipeline are never omitted, even if no match is found; this behavior is specific to an Inner Join.
- * D. Included fields from both pipelines will have NULL values: Only the fields from the imported pipeline will have NULL values; the fields from the primary pipeline retain their original values.

This behavior of Left Outer Join ensures that all records from the primary pipeline are preserved, with NULLs indicating the absence of matching data from the imported pipeline.

NEW QUESTION # 42

A Prism data administrator notices that several of the Prism calculated fields on their lineage are producing nil results, so they need to revise the expressions for all of the affected calculated fields. Where can they review the expressions in bulk?

- A. The View Dataset Lineage report.
- B. The table or dataset where the calculated field was created.
- C. Any dataset in the lineage.
- D. Any table in the lineage.

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, calculated fields are defined within datasets, and their expressions dictate the logic used to compute their values. When issues like nil results arise, an administrator needs a centralized view to review and troubleshoot these expressions. According to the official Workday Prism Analytics study path documents, the View Dataset Lineage report is the tool that allows users to review the lineage of datasets, including the expressions of calculated fields, in bulk. This report provides a visual representation of the data lineage, showing the relationships between tables, datasets, and calculated fields, and allows users to drill into the details of each dataset to inspect the expressions of calculated fields across the lineage.

The other options are not as effective for this purpose:

A: The table or dataset where the calculated field was created: While you can review expressions in the specific dataset where a calculated field was created, this approach does not allow for a bulk review across multiple datasets in the lineage.

C: Any table in the lineage: Tables store raw data and do not contain calculated field expressions, which are defined in datasets.

D: Any dataset in the lineage: Reviewing datasets individually does not provide a bulk view of all calculated fields across the lineage, making it less efficient than the View Dataset Lineage report.

The View Dataset Lineage report is the most efficient way to review and troubleshoot calculated field expressions in bulk, enabling the administrator to identify and revise the problematic expressions causing nil results.

NEW QUESTION # 43

You want to convert each instance of a multi-instance field and convert it to a single-instance field. What transformation stage can you use to do this?

- A. Manage Fields
- B. Explode
- C. Group By
- D. Unpivot

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, a multi-instance field contains multiple values for a single record (e.g., a list of skills for a worker). To convert each instance of a multi-instance field into a single-instance field, you need a transformation that expands the data into multiple rows, with each row containing one instance. According to the official Workday Prism Analytics study path documents, the Explode stage (option B) is the transformation stage designed for this purpose. The Explode stage takes a multi-instance field and creates a new row for each instance, transforming the multi-instance field into a single-instance field in the output. For example, if a worker has three skills in a multi-instance field, the Explode stage will create three rows, each with a single skill value in a single-instance field.

The other options are incorrect:

* A. Unpivot: Unpivot transforms columns into rows (e.g., converting wide data to long format), but it does not handle multi-instance fields, which are a specific Workday data type.

* C. Manage Fields: The Manage Fields stage modifies field properties (e.g., type, name) but cannot expand a multi-instance field into multiple rows.

* D. Group By: The Group By stage aggregates data (e.g., summing values by a key) but does not convert multi-instance fields into single-instance fields.

The Explode stage is the correct transformation to achieve the conversion of a multi-instance field into a single-instance field by expanding the data into multiple rows.

NEW QUESTION # 44

You accidentally delete a Prism calculated field that is used in other Prism calculated fields or conditions.

What is a possible outcome?

- A. The system will automatically adjust any dependencies accordingly.
- B. Any calculated field referencing the deleted field defaults to zero.
- **C. Errors will result in any stage or calculated field that references the field.**
- D. The system will automatically reverse the deletion because the field is referenced elsewhere.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, calculated fields are often interdependent, with one calculated field referencing another in its expression or being used in conditions within a dataset's transformation stages. According to the official Workday Prism Analytics study path documents, if a calculated field is deleted while other calculated fields or conditions depend on it, the system does not automatically handle the dependency. Instead, this deletion will cause errors in any stage or calculated field that references the deleted field. These errors occur because the dependent calculations or conditions can no longer resolve the reference to the deleted field, leading to failures in the dataset's transformation pipeline or when the dataset is processed or published.

The other options are incorrect:

A: The system will automatically reverse the deletion because the field is referenced elsewhere: Prism Analytics does not have an automatic reversal mechanism for deletions; users must manually restore the field if needed.

B: Any calculated field referencing the deleted field defaults to zero: The system does not default to zero; it will instead throw an error due to the unresolved reference.

D: The system will automatically adjust any dependencies accordingly: Prism does not automatically adjust dependencies; the user must manually update the dependent fields or conditions to resolve the issue.

The resulting errors highlight the importance of carefully managing dependencies when deleting calculated fields, ensuring that all references are updated or removed to avoid disruptions in the dataset's transformation logic.

NEW QUESTION # 45

You want to remove data within a Prism data source without deleting any dependent custom reports. What task can you use to do this?

- **A. Delete Published Rows**
- B. Inactivate Dataset
- C. Delete Dataset
- D. Unpublish Dataset

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Workday Prism Analytics, removing data from a Prism data source (PDS) without affecting dependent custom reports requires a careful approach to preserve the data source's structure and dependencies.

According to the official Workday Prism Analytics study path documents, the task to use is Delete Published Rows (option A). This task removes the data rows within the Prism data source while keeping the data source's metadata (e.g., field definitions) and structure intact. Since custom reports depend on the data source's structure rather than the specific data rows, deleting the published rows will not break the reports. After deleting the rows, you can republish the dataset with updated data, and the reports will

continue to function with the new data, assuming the structure remains unchanged.

The other options are incorrect:

- * A. Inactivate Dataset: Inactivating a dataset disables it but does not remove data from the published data source, and it may still affect reports by making the data source inaccessible.
- * B. Delete Dataset: Deleting the dataset entirely will also delete the Prism data source, breaking any dependent custom reports.
- * C. Unpublish Dataset: Unpublishing the dataset removes the Prism data source, which will break dependent reports until the dataset is republished.

The Delete Published Rows task ensures that data is removed from the Prism data source without impacting the dependent custom reports, allowing for seamless data updates.
