At DumpsActual, we stand behind our Docker DCA Exam Questions and offer a money-back guarantee in the event of failure. We are confident that our Docker Certified Associate (DCA) Exam (DCA) exam questions and practice test engine will provide you with all the information and tools you need to pass the exam with flying colors. Plus, for a limited time, we are offering a 20% discount on your purchase. Don't wait – invest in your future and advance your career with DumpsActual today.

To earn the DCA certification, candidates must pass a 55-question, multiple-choice exam that covers a broad range of topics, including Docker architecture, Docker installation and configuration, Docker networking, Docker images and repositories, Docker security, and Docker orchestration. DCA Exam is designed to test the candidate's practical knowledge of Docker, rather than just their ability to memorize facts and figures.

## Top Features of Docker DCA Practice Test Material

The passing rate of our study material is very high, and it is about 99%. We provide free download and tryout of the DCA question torrent, and we will update the DCA exam torrent frequently to guarantee that you can get enough test bank and follow the trend in the theory and the practice. We provide 3 versions for you to choose thus you can choose the most convenient method to learn. Our DCA Latest Questions are compiled by the experienced professionals elaborately. So it will be very convenient for you to buy our product and it will do a lot of good to you.

Docker has become one of the most popular technologies for containerization and application development. As the popularity of Docker continues to grow, so does the need for skilled professionals who can manage and deploy Docker containers. The Docker Certified Associate (DCA) exam is designed to validate the skills and expertise of professionals who work with Docker. DCA Exam is intended to test the candidate's knowledge of Docker concepts, Docker architecture, and Docker installation and configuration.

## Docker Certified Associate (DCA) Exam Sample Questions (Q61-Q66):

### NEW QUESTION # 61

Will this command ensure that overlay traffic between service tasks is encrypted?

Solution: docker network create -d overlay --secure

- A. Yes
- B. No

**Answer: B**

Explanation:

Explanation

This command will not ensure that overlay traffic between service tasks is encrypted, because it uses an invalid option for enabling encryption. According to the official documentation, there is no such option as

--secure for the docker network create command. The correct option to use is -o encrypted=true.

References: <https://docs.docker.com/network/drivers/overlay/#encryption>

[https://docs.docker.com/engine/reference/commandline/network\\_create/](https://docs.docker.com/engine/reference/commandline/network_create/)

### NEW QUESTION # 62

Which of the following commands starts a Redis container and configures it to always restart unless it is explicitly stopped or Docker is restarted?

- A. 'docker run -d --failure omit-stopped redis'
- B. 'docker run -d --restart-policy unless-stopped redis'
- C. 'docker run -d --restart omit-stopped redis'
- D. 'docker run -d --restart unless-stopped redis'

**Answer: D**

### NEW QUESTION # 63

Will a DTR security scan detect this?

Solution: private keys copied to the image

- A. Yes
- B. No

**Answer: A**

Explanation:

= A DTR security scan will detect private keys copied to the image. DTR security scan is a feature of Docker Trusted Registry (DTR) that scans images to detect any security vulnerability<sup>1</sup>. DTR security scan uses the open source tool SecretScanner<sup>2</sup> to find unprotected secrets in container images or file systems. SecretScanner can match the contents of images against a database of approximately 140 secret types, including private keys<sup>3</sup>. Therefore, if an image contains private keys, DTR security scan will report them as potential secrets and alert the user to remove them from the image. Reference:

#### NEW QUESTION # 64

Does this command display all the pods in the cluster that are labeled as 'env: development'?

Solution: 'kubectl get pods --all-namespaces -l env=development'

- A. Yes
- B. No

**Answer: A**

#### NEW QUESTION # 65

A Kubernetes node is allocated a /26 CIDR block (64 unique IPs) for its address space.

If every pod on this node has exactly two containers in it, how many pods can this address space support on this node?

- A. 64 for every service routing to pods on this node
- B. 0
- C. 1
- D. 2
- E. 32 in every Kubernetes namespace

**Answer: D**

Explanation:

A Kubernetes node is allocated a /26 CIDR block (64 unique IPs) for its address space. This means that the node can assign up to 64 IP addresses to its resources, such as pods and containers. If every pod on this node has exactly two containers in it, then each pod will need two IP addresses, one for each container. Therefore, the node can support up to 32 pods, since  $64 / 2 = 32$ . The other options are incorrect because they either exceed the available IP addresses or do not account for the number of containers per pod. Reference:
