Port:	
Value:	value
Password Regex:	(.*)
Backup Password File:	[Select] ▼
Usage Display Name:	

☐ Disable automatic management for this account

Reason: No Reason

What is the least intrusive way to accomplish this?

- A. Use the "change" button on the usage's details page.
- B. Use the "sync" button on the usage's details page.
- C. Use the "reconcile" button on the parent account's details page.
- **D. Use the "change" button on the parent account's details page.**

Answer: D

NEW QUESTION # 23

What is the purpose of the password change process?

- A. To allow CyberArk to manage unknown or lost credentials
- B. To generate a new complex password
- **C. To change the password of an account according to organizationally defined password rules**
- D. To test that CyberArk is storing accurate credentials for accounts

Answer: C

Explanation:

Explanation

The purpose of the password change process is to change the password of an account according to organizationally defined password rules. The password change process is a feature of CyberArk that enables the Central Policy Manager (CPM) to manage the passwords of privileged accounts that are stored in the Vault. The CPM can change the passwords automatically or manually, based on predefined policies, schedules, or user requests. The password change process ensures that the passwords are secure, compliant, and synchronized with the target systems and the Vault. The password change process also supports different types of accounts, such as one-time passwords, exclusive accounts, and dual accounts¹.

The other options are not the main purpose of the password change process, although they may be related to some aspects of it. The password change process does not test that CyberArk is storing accurate credentials for accounts, although it may verify the password validity before changing it. The password change process does not allow CyberArk to manage unknown or lost credentials, although it may reconcile the passwords if they are out of sync with the target systems. The password change process does not generate a new complex password, although it may use a random password generation mechanism to create a new password that meets the password policy requirements.
