# Huawei H35-211_V2.5 Valid Exam Preparation | H35-211_V2.5 Reliable Test Guide

Up to now our H35-211_V2.5 practice materials consist of three versions, all those three basic types are favorites for supporters according to their preference and inclinations. On your way moving towards success, our H35-211_V2.5 preparation materials will always serves great support. As long as you have any questions on our H35-211_V2.5 Exam Questions, you can just contact our services, they can give you according suggestion on the first time and ensure that you can pass the H35-211_V2.5 exam for the best way.

Huawei H35-211_V2.5: HCIP-Access V2.5 is a high-level certification exam for IT professionals who want to validate their knowledge and skills in the access network field. HCIP-Access V2.5 certification demonstrates their proficiency in various access network technologies and protocols, including PPP, DHCP, DNS, STP, VLAN, and more. The HCIP-Access V2.5 certification is a stepping stone for IT professionals seeking to advance their careers and enhance their skills in the field of access networks. It is also a prerequisite for taking the Huawei HCIE-Access certification, which is the highest level of certification in the access network field.

Pass-Sure H35-211_V2.5 Valid Exam Preparation & Leading Provider in Qualification Exams & Fantastic H35-211_V2.5 Reliable Test Guide

It is important to mention here that the HCIP-Access V2.5 practice questions played important role in their Huawei H35-211_V2.5 Exams preparation and their success. So we can say that with the Huawei H35-211_V2.5 Exam Questions you will get everything that you need to learn, prepare and pass the difficult Huawei H35-211_V2.5 exam with good scores.

Huawei is a renowned multinational technology company that specializes in providing cutting-edge solutions in the field of telecommunications, information, and communication technology. The company has established itself as a leader in the industry by consistently delivering high-quality products and services to its customers worldwide. One of the ways Huawei maintains its reputation is by offering certification programs that verify the skills and knowledge of professionals in various domains. One of the most sought-after certifications offered by Huawei is the Huawei H35-211_V2.5 (HCIP-Access V2.5) Certification Exam.

Huawei HCIP-Access V2.5 Sample Questions (Q49-Q54):

NEW QUESTION # 49
Which of the following statements about congestion avoidance is incorrect?

- A. To prevent high-priority packets from being discarded, the early drop threshold of high-priority packets is set to a smaller value.
- B. The RED technology can reduce the jitter during packet transmission.
- C. Congestion avoidance is a traffic control mechanism that monitors the usage of network resources (such as queues or memory buffers) and discards packets when the system is congested to adjust the traffic and mitigate network overload.
- D. Tail drop causes global TCP synchronization and reduces bandwidth usage.

Answer: A

Explanation:
In AQM, high-priority queues are given more tolerant (larger) thresholds so they are less likely to be dropped early. Setting a smaller early-drop threshold for high priority would increase their loss probability, which contradicts QoS objectives-thus A is incorrect. Descriptions in B, C, and D align with Huawei's treatment of congestion avoidance: RED/WRED proactively drops to stabilize queues and can reduce delay variation; tail drop at full buffer can lead to global TCP synchronization.
Reference: HCIP-Access V2.5 - Congestion Avoidance (RED/WRED behavior, thresholds, and TCP effects of tail drop).

NEW QUESTION # 50
Under IGMP snooping, there are two users on the OLT watching the same program, and the OLT sends two Join messages to the multicast router.

- A. wrong
- B. Right

Answer: A

Explanation:
With IGMP Snooping/Proxy on access devices (such as Huawei OLTs), multiple receiver joins for the same (VLAN, Group) are aggregated. The OLT maintains a per-group member table and typically forwards a single upstream IGMP Join toward the multicast router (or querier) for that group, regardless of how many downstream users in that VLAN have joined. Additional local joins add downstream interfaces to the OLT's table but do not trigger extra upstream joins per user. Hence, stating that two same-program viewers cause
"two join messages" upstream is wrong.

NEW QUESTION # 51
In the upstream direction of the OLT, link aggregation can be used to improve bandwidth and reliability. Which of the following OLT uplink aggregation modes are supported?

- A. Dynamic
- B. Automatic
- C. Static
- D. Manual

Answer: A,C

NEW QUESTION # 52
If multicast services are deployed only on private networks, which multicast address segment is preferred?

- A. 224.0.0.0/8
- B. 232.0.0.0/8
- C. 225.0.0.0/8
- D. 239.0.0.0/8

Answer: D

NEW QUESTION # 53
(Single-choice) HSI service uses VLAN tags to bind users precisely. If there are 5K FTTH users hanging under the OLT, which VLAN switching scheme is recommended?

- A. S+C # S+C
- B. User VLAN # C-VLAN # S+C-VLAN
- C. C # S+C
- D. C # S+C
- E. C # S

Answer: D

Explanation:
When the number of access users approaches or exceeds the single-layer VLAN space and services must be distinguished per user, Huawei recommends hierarchical VLAN (QinQ) on the uplink: map a customer VLAN (C-VLAN) at the access side and add a service/provider VLAN (S-VLAN) toward the aggregation
/core, i.e., C # S+C. This expands scalability beyond the ~4K single-VLAN limit while enabling precise user
/service binding for large FTTH deployments (e.g., ~5K users under one OLT).
References: HCIP-Access V2.5 Study Guide (HSI service access and VLAN planning; QinQ/hierarchical VLAN best practices).
