---

1/4

Most experts agree that the best time to ask for more dough is after you feel your C\_S4CPB performance has really stood out. To become a well-rounded person with the help of our C\_S4CPB study questions, reducing your academic work to a concrete plan made up of concrete actions allows you to streamline and gain efficiency, while avoiding pseudo work and guilt. Our C\_S4CPB Guide materials provide such a learning system where you can improve your study efficiency to a great extent.

As a worldwide leader in offering the best C\_S4CPB test torrent in the market, GetValidTest are committed to providing update information on C\_S4CPB exam questions that have been checked many times by our professional expert, and we provide comprehensive service to the majority of consumers and strive for constructing an integrated service. What's more, we have achieved breakthroughs in certification training application as well as interactive sharing and after-sales service. It is worth for you to purchase our C\_S4CPB training braindump.

>> Online C\_S4CPB Training <<

**Free PDF SAP - C\_S4CPB - Accurate Online SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) Training**

As mentioned earlier, GetValidTest solves all problems that you face while locating updated SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) (C\_S4CPB) exam questions. We know that as an applicant

for the test, you have excessive pressure to pass the SAP Certification Exam. GetValidTest is here to help you earn the highly sought-after SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) (C\_S4CPB) certification on the first attempt.

## SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) Sample Questions (Q10-Q15):

### NEW QUESTION # 10

#### SIMULATION

Set up an Integration Scenario

Business Scenario

You are responsible for setting up the Bank Integration with File Interface (1EG). During an actual implementation, you would first download the Set-up Instructions for the business process from SAP Signavio Process Navigator. In this practical exam, all the information will be provided to you, so you do not need to download the Set-up Instructions.

Prerequisites

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Your Task

Create a Communication Arrangement for Finance - Account Receivable Bank Statement Integration with the information below and save.

Parameter	Value
Scenario	SAP_COM_0316
Arrangement Name	SAP_COM_0316_#####
Communication System	Select previously created system (1EG_SYSTEM_#####)

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a Communication Arrangement for the bank integration scenario using the communication system created in the previous task.

The required scenario is:

Scenario ID: SAP\_COM\_0316

Scenario Description: Finance - Account Receivable Bank Statement Integration This is the final configuration step in the integration scenario setup sequence.

Business Scenario Explanation

In the previous tasks, you created:

a Communication User

a Communication System

Now you must create the Communication Arrangement that links the communication scenario to the communication system.

In SAP S/4HANA Cloud, the communication arrangement defines:

which communication scenario is used,

which communication system is connected,

which inbound/outbound services are active,

and which technical settings are applied for the integration.

For this task, the communication arrangement is used for:

Finance - Account Receivable Bank Statement Integration

Scenario: SAP\_COM\_0316

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values provided.

Do not change spaces, underscores, or capitalization.

The communication system selected must be the one created in Task 14:

1EG\_SYSTEM\_#####

Required Values

Use the following values exactly as shown in the task image.

Parameter	Value
Scenario	SAP_COM_0316
Arrangement Name	SAP_COM_0316_#####
Communication System	Select previously created system (1EG_SYSTEM_#####)

Example

If your suffix is 000013, then the values become:

Scenario = SAP\_COM\_0316

Arrangement Name = SAP\_COM\_0316\_000013

Communication System = 1EG\_SYSTEM\_000013

Step 1: Open the app "Communication Arrangements"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the search bar or app finder.

Search for:

Communication Arrangements

Open the app.

Explanation:

This app is used to create and maintain communication arrangements for SAP communication scenarios.

Because the task explicitly asks to create a communication arrangement, this is the correct starting point.

Step 2: Start creating a new communication arrangement

Inside the Communication Arrangements app:

Click:

New

Explanation:

This starts the creation wizard for a new communication arrangement.

Step 3: Enter the communication scenario

In the Scenario field, enter:

SAP\_COM\_0316

Then confirm or continue.

Explanation:

This is the required SAP communication scenario for:

Finance - Account Receivable Bank Statement Integration

It is critical to use the exact scenario ID because the arrangement configuration is generated from this selection.

Step 4: Continue to the arrangement creation screen

After selecting the scenario:

Click Create

or

Click Continue

depending on the screen behavior.

Explanation:

This opens the detailed arrangement creation screen where the arrangement name and communication system are maintained.

Step 5: Enter the Arrangement Name

In the Arrangement Name field, enter:

SAP\_COM\_0316\_#####

Example

If your suffix is 000013, enter:

SAP\_COM\_0316\_000013

Explanation:

This is the technical/business name of the communication arrangement and must match the task exactly.

Step 6: Select the previously created Communication System

In the Communication System field:

Open the value help or selection list.

Select the communication system created in the previous task:

1EG\_SYSTEM\_#####

Example

If your suffix is 000013, select:

1EG\_SYSTEM\_000013

Explanation:

This step links the communication arrangement to the communication system that contains:

the technical host definition,

the communication user assignment,

and the inbound communication settings.

Without this link, the arrangement is incomplete.

Step 7: Review the automatically derived communication details

After selecting the communication system, SAP may automatically populate integration-related sections such as:

inbound communication user

authentication method

service endpoints

service URLs

Explanation:

These values are normally derived automatically from the selected communication scenario and communication system.

You usually do not need to manually change them unless the task explicitly requires it.

Step 8: Review all required values

Before saving, verify:

Scenario = SAP\_COM\_0316

Arrangement Name = SAP\_COM\_0316\_#####

Communication System = 1EG\_SYSTEM\_#####

Explanation:

This final review ensures there are no typing errors or wrong system selections.

Step 9: Save the Communication Arrangement

Click:

Save

Explanation:

This finalizes the communication arrangement creation.

Without saving, the configuration does not exist and the integration setup is incomplete.

Step 10: Verify the saved arrangement

After saving, confirm that the arrangement shows:

Arrangement Name = SAP\_COM\_0316\_#####

Communication System = 1EG\_SYSTEM\_#####

Scenario = SAP\_COM\_0316

scenario description:

Finance - Account Receivable Bank Statement Integration

Explanation:

This is the confirmation that the communication arrangement was created successfully and is ready for later use in the bank integration scenario.

Expected Result

After this task is completed successfully:

the communication arrangement exists,

it uses scenario SAP\_COM\_0316,

it has the correct arrangement name,

it is linked to the previously created communication system,

the arrangement is saved successfully.

## NEW QUESTION # 11

### SIMULATION

Create a Custom Business Role with Restrictions

Business Scenario:

You are building a custom business role with restrictions to ensure the end users assigned the role have only the minimum level of

access necessary to complete their core job tasks. The end users are project managers based in the United States. They should only be able to create projects, edit projects, and access projects that are occurring in the United States. They should not be able to staff any resources outside of the United States. Write, Read, and Value Help access should be restricted to only the United States for all relevant fields.

Prerequisites:

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note: Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Use the template for the business role Project Manager - Professional Services (SAP\_BR\_PROJECT\_MANAGER\_PROF) to create a new business role with the following information:

Parameter	Value
New Business Role ID	BR_PROJECT_MANAGER_PROF_US_#####
New Business Role Description	Project Manager - Professional Services - US - #####
Option for Launchpad Spaces	Create and Assign Spaces Based on Space Templates
New Space ID	ZBR_PROJECT_MANAGER_PROF_US_#####
Activate IAM Apps	Yes (check the box)

**Answer:**

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a custom business role for project managers in the United States by using the standard SAP template role Project Manager - Professional Services and then restricting the role so users only have the minimum access needed for their job.

The template role used is:

Template Business Role ID: SAP\_BR\_PROJECT\_MANAGER\_PROF

Template Business Role Description: Project Manager - Professional Services The new custom role must be created with exact values defined in the task.

Business Scenario Explanation

In this simulation, you are building a restricted custom role for project managers who work only in the United States.

The goal is to ensure that these end users:

can create and edit projects,

can access only projects occurring in the United States,

cannot work with projects or staffing outside the US,

have only the minimum level of authorization needed.

This is done in two major parts:

Create a new custom business role from the standard SAP template

Restrict the role values so only US-related data is allowed

Important Notes

Always replace ##### with the last 6 digits of your group number.

Every value must be entered exactly as shown.

Even one missing space or incorrect character can cause the simulation validation to fail.

You must also create and assign a launchpad space as part of the custom role creation.

Required Values for Role Creation

Use the following values exactly as shown in the task image.

Parameter

Value

New Business Role ID

BR\_PROJECT\_MANAGER\_PROF\_US\_#####

New Business Role Description

Project Manager - Professional Services - US - #####

Option for Launchpad Spaces

Create and Assign Spaces Based on Space Templates

New Space ID

ZBR\_PROJECT\_MANAGER\_PROF\_US\_#####

Activate IAM Apps

Yes (check the box)

Example

If your suffix is 000457, the values become:

BR\_PROJECT\_MANAGER\_PROF\_US\_000457

Project Manager - Professional Services - US - 000457

ZBR\_PROJECT\_MANAGER\_PROF\_US\_000457

Detailed Step-by-Step Procedure

Part 1: Open the standard template role

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is used to maintain standard and custom business roles.

Because this task requires creating a custom role from an existing template, this is the correct starting app.

Business Role ID	Business Role Description	Leading Business Role	User Assignment Count	Business Catalog Assignment Count	Price Category	Business Catalog Deprecation Count	Fiori Launchpad Space Assignment Count	Business Role
BR_AA_ACCOUNTANT	Asset Accountant		329	15	Advanced	0	1	
BR_ADMIN_APR_FICA	Administrator - Accounts Payable and Receivable (FI-CA)		36	78	Advanced	0	1	
BR_ADMIN_TEST_AUTOMATION	Administrator - Test Automation		28		Advanced	0	1	
BR_ADMINISTRATOR	Administrator		523	81	Advanced	0	5	
BR_ADMINISTRATOR_GRP	Administrator - Group Reporting		32	8	Advanced	0	1	
BR_ADMINISTRATOR_HRINFO	Administrator - HR Info		346	7	Advanced	0	2	
BR_ANALYTICS_SPECIALIST	Analytics Specialist		25	14	Advanced	0	2	
BR_AP_ACCOUNTANT	Accounts Payable Accountant		1362	70	Advanced	0	1	
BR_AP_MANAGER	Accounts Payable Manager		82	15	Advanced	0	1	
BR_APR_ACCOUNTANT_FICA	Accounts Payable and Receivable Accountant (FI-CA)		80	168	Advanced	0	1	
BR_APR_MANAGER_FICA	Accounts Payable and Receivable Manager (FI-CA)		42	23	Advanced	0	1	
BR_AR_ACCOUNTANT	Accounts Receivable Accountant		334	38	Advanced	0	1	
BR_AR_MANAGER	Accounts Receivable Manager		42	14	Advanced	0	1	
BR_BILLING_CLERK	Billing Clerk		874	67	Core	0	1	
BR_BOM_ENG_CUST_ORDER	BOM Engineer - Customer Order		18	9	Core	0	1	
BR_BOM_ENGINEER	BOM Engineer		23	18	Core	0	1	

Step 2: Search for the template role

Inside Maintain Business Roles:

In the search/filter area, search for:

SAP\_BR\_PROJECT\_MANAGER\_PROF

or

Project Manager - Professional Services

Open the standard SAP template role.

Explanation:

You must start from the standard template role because the task explicitly says to use the template for:

Project Manager - Professional Services

SAP\_BR\_PROJECT\_MANAGER\_PROF

## Create Business Role from Template

Business role templates delivered by SAP are intentionally broad and meant for testing. Before productive use, business roles based on business role templates must be customized and restricted to actual company roles to comply with the principle of least privilege.

Template: \*  
SAP BR PROJECT\_MANAGER\_PROF 

New Business® Role ID: \*  
BR\_PROJECT\_MANAGER\_PROF\_US\_000457

New Business Role Description:  
Project Manager - Professional Services - US - 000457

Option for Launchpad Spaces:  
Use Space Templates as Predefined Spaces 

Activate IAM Apps

Part 2: Create the custom role from the template

Step 3: Click "Create Derived Business Role"

On the template role page:

Click:

Create Derived Business Role

Explanation:

This function creates a customer-specific copy based on the standard SAP business role template.

It preserves the delivered role content but allows you to define your own role ID, description, restrictions, and launchpad space.

Step 4: Enter the custom role information

In the creation popup, enter the values exactly as follows:

Template = SAP\_BR\_PROJECT\_MANAGER\_PROF

New Business Role ID = BR\_PROJECT\_MANAGER\_PROF\_US\_#####

New Business Role Description = Project Manager - Professional Services - US - ##### Option for Launchpad Spaces = Create and Assign Spaces Based on Space Templates New Space ID = ZBR\_PROJECT\_MANAGER\_PROF\_US\_##### Activate

IAM Apps = checked Explanation:

These values define the new custom project manager role that will later be restricted to US-only access.

The space option is important because the task expects the role to include its own launchpad space.

## Create Business Role from Template

Business role templates delivered by SAP are intentionally broad and meant for testing. Before productive use, business roles based on business role templates must be customized and restricted to actual company roles to comply with the principle of least privilege.

Template: \*

SAP\_BR\_PROJECT\_MANAGER\_PROF

New Business Role ID: \*

BR\_PROJECT\_MANAGER\_PROF\_US\_000457

New Business Role Description:

Project Manager - Professional Services - US - 000457

Option for Launchpad Spaces:

Create and Assign Spaces Based on Space Templates

New Space ID: \*

ZBR\_PROJECT\_MANAGER\_PROF\_US\_000457

Activate IAM Apps

OK

Cancel

Step 5: Confirm creation

Click OK

Explanation:

SAP now creates the custom role derived from the template and assigns the new launchpad space at the same time.

Part 3: Verify the newly created custom role

Step 6: Review the new custom role

After creation, SAP opens the new custom role.

Verify:

Business Role ID = BR\_PROJECT\_MANAGER\_PROF\_US\_#####

Business Role Description = Project Manager - Professional Services - US - ##### Business Role Template ID =

SAP\_BR\_PROJECT\_MANAGER\_PROF Explanation:

This confirms the derived role was created correctly from the right SAP template.

Part 4: Maintain role restrictions

Step 7: Open "Maintain Restrictions"

On the custom role page:

Click:

Maintain Restrictions

Explanation:

This is the most important part of the task.

You are not only creating a role - you are also limiting the role so it only allows US-related values.

Step 8: Understand the rule for restriction maintenance

The PDF/task logic is:

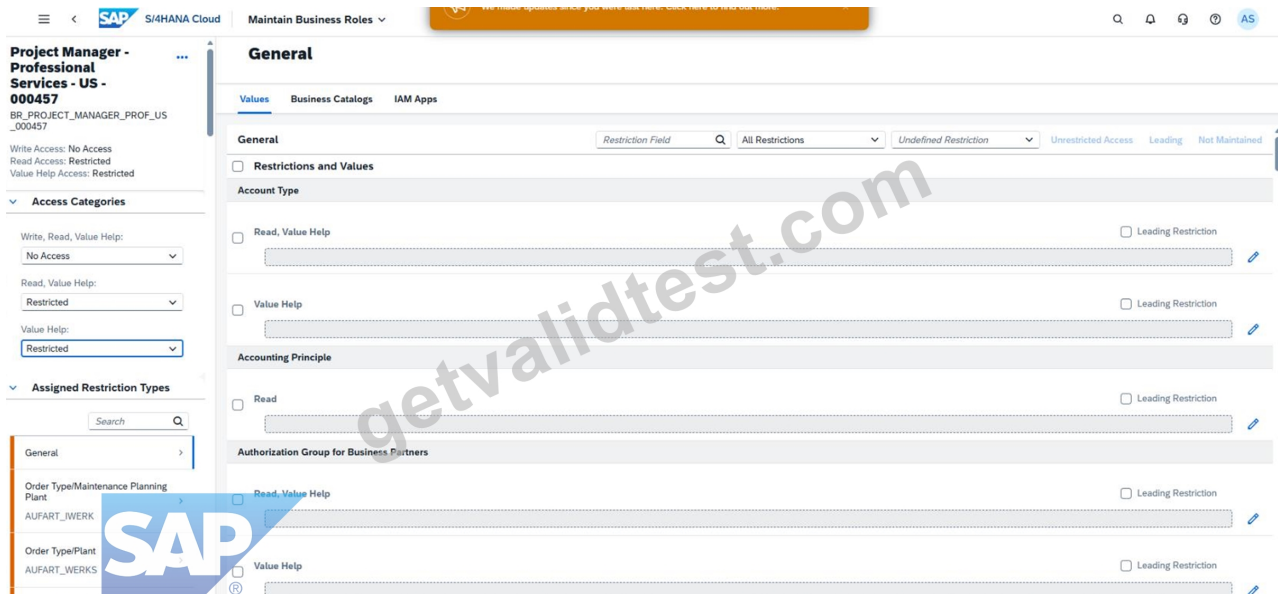

Fields explicitly listed in the restriction table → keep them Restricted and enter the required values All other fields not listed in the task table → set them to Not Maintained Explanation:

This is essential.

If extra fields remain restricted or blank, the role may not validate correctly.

The safest approach is:

only maintain the required fields,  
mark all unrelated fields as Not Maintained.

Part 5: Enter the required US restrictions

From your exercise run, the maintained values included restrictions such as:

Keep these kinds of fields restricted with US/1710 values where required Examples from your run:

Bank Country/Region Key

Read, Value Help = US

Value Help = US

Company Code

use 1710 only where the task table explicitly requires it

Purchasing Organization

use 1710 where required

Valuation Area

use 1710 where required

Explanation:

These are the exact business restrictions that make the role usable only for the intended geography and business scope.

Step 9: Set unrelated restriction fields to "Not Maintained"

For every field not included in the task's restriction list, choose:

Not Maintained

Examples from your screenshots included fields like:

Accounting Principle

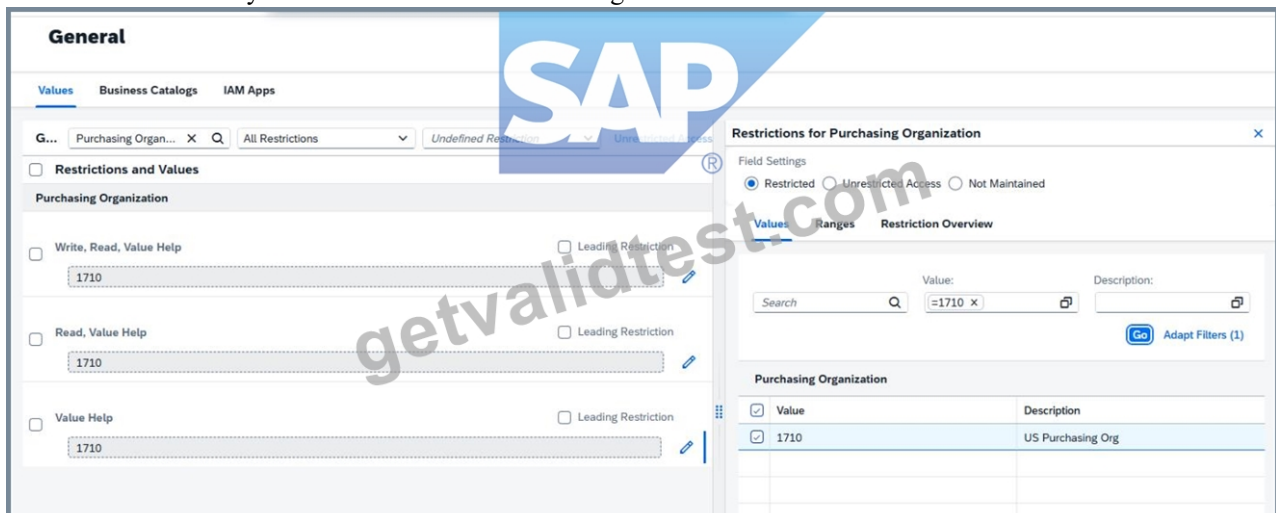

Authorization Group for Business Partners

Billing Type

These should be Not Maintained unless they are explicitly listed in the task's required restriction table.

Explanation:

This removes unnecessary access and matches the task wording that all other fields should be set to Not Maintained.

Step 10: Save the restrictions

After all required values are entered and unrelated fields are marked Not Maintained:

Click Save

Explanation:

This saves the restriction profile of the role.

If you do not save here, the role will remain incomplete or in draft.

Part 6: Verify launchpad space and page creation

Step 11: Go to Launchpad Spaces

In the custom role:

Open the tab:

Launchpad Spaces

Verify that the assigned space exists:

ZBR\_PROJECT\_MANAGER\_PROF\_US\_#####

Explanation:

Because you selected Create and Assign Spaces Based on Space Templates, SAP should have created and assigned the launchpad space automatically.

Step 12: Verify the created space

Open the assigned space and confirm:

the custom space exists,

it is customer-managed,

the pages are assigned correctly.

Explanation:

This proves that the new business role has its own launchpad structure as required by the task.

Expected Result

After this task is completed successfully:

a new custom role exists based on SAP\_BR\_PROJECT\_MANAGER\_PROF,

the role uses the exact required ID and description,

the role has a custom launchpad space,

IAM apps are activated,

restrictions are maintained for US-only access,

all irrelevant fields are set to Not Maintained,

the role is saved successfully.

## NEW QUESTION # 12

### SIMULATION

Note: In this practical certification exam, you will only be given high-level instructions. The step descriptions are complete and tested to work. They are not detailed, as this is a test of your knowledge of navigating the system on your own.

Caution: Please make sure you are always using your assigned group number. The last 6 digits are denoted as ##### in the following tasks. Your results will not be recorded if you are not using your own group number. To find your group number: Select your user in the top right corner. You will see your user name with a series of numbers. Use the last 6 digits as your group number

Caution: To keep the system running smoothly and avoid unnecessary costs, please follow the assigned exercises carefully when using the SAP Landscape. Avoid going beyond the exercise scope and only use your group number to help maintain a stable and efficient environment for everyone.

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Purpose: Identify your own six-digit suffix and use it consistently in every task.

Open the user menu at the top-right of SAP S/4HANA Cloud.

Read your user name and note the last six digits.

Use those last six digits in every place the task PDF shows #####.

Example used in this guide: 000013

## NEW QUESTION # 13

### SIMULATION

Migrate Bank Data

### Business Scenario

You are responsible for migrating bank data into the SAP S/4HANA Cloud Public Edition system. You have determined the best method is Migrate Data Using Staging Tables, as you only have a couple banks to migrate.

Prerequisites:

Note:

In the task below, always replace ##### with the last 6 digits of your group number.

Note:

Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Create a new migration project with the information listed below.

Parameter	Data
Name	Bank Data #####
Migration object	Bank

### Answer:

Explanation:

See Explanation below for all solution

Explanation:

Objective

The purpose of this task is to create a new migration project for the bank data migration scenario in SAP S/4HANA Cloud Public Edition.

The migration method for this scenario is:

Migrate Data Using Staging Tables

The migration project must be created with the exact values provided in the task.

Business Scenario Explanation

In this scenario, you are responsible for migrating bank master data into SAP S/4HANA Cloud Public Edition.

Because only a few banks need to be loaded, the selected migration approach is:

Migrate Data Using Staging Tables

Before any files can be uploaded or any bank data can be validated and migrated, a migration project must first be created. This project acts as the main container for:

the migration object,

the staging-table upload,

validation,

mapping,

transfer to staging tables,

and the final migration execution.

Important Notes

Always replace ##### with the last 6 digits of your group number.

Use the exact values shown in the task.

The migration project must be created using:

Migrate Data Using Staging Tables

The migration object must be:

Bank

Save or create the project only after confirming the values are correct.

Required Values

Use the following values exactly as shown in the task image.

Parameter

Data

Name

Bank Data #####

Migration object

Bank

Example

If your suffix is 000013, then the values become:

Name = Bank Data 000013

Migration object = Bank

## Detailed Step-by-Step Procedure

Step 1: Open the app "Migrate Your Data"

From the SAP S/4HANA Cloud launchpad:

Log in to SAP S/4HANA Cloud.

Use the app search.

Search for:

Migrate Your Data

or

Migration Projects

Open the app.

Explanation:

This app is the migration cockpit used to create migration projects and load master data and transactional data into the system.

Because the task asks you to create a new migration project, this is the correct starting point.

Step 2: Start creating a new migration project

Inside the migration app:

Click:

Create

When the dropdown appears, select:

Migrate Data Using Staging Tables

Explanation:

This is very important because the business scenario explicitly says that the chosen migration method is Migrate Data Using Staging Tables.

Do not choose:

Migrate Data Directly from SAP System

That would be the wrong migration approach for this task.

Step 3: Enter the migration project name

In the project creation screen, enter:

Name = Bank Data #####

Example

If your suffix is 000013, enter:

Bank Data 000013

Explanation:

This is the name of the migration project and must exactly match the task requirement.

Step 4: Keep the staging-table migration approach

On the project creation screen, confirm the migration approach is:

Migrate Data Using Staging Tables

Explanation:

This ensures the migration project is created with the correct loading approach for later CSV/staging-table processing.

Step 5: Keep the local database connection

When the system asks for database connection, leave the default:

Local SAP S/4HANA Database Schema

Explanation:

In your execution, the local schema was used for the migration project.

This is the expected option for the training scenario.

Step 6: Continue to Migration Objects

Click:

Step 2

or continue to the second step of project creation.

Explanation:

This moves from the general project header information to the migration object selection.

Step 7: Search for the migration object

In the Migration Objects section:

Search for:

Bank

Explanation:

The task explicitly requires the migration object:

Bank

So only that object should be selected.

Step 8: Select the migration object "Bank"

When the object appears:

Select:

Bank

Make sure it appears in the Selected Migration Objects area.

Explanation:

This step links the project specifically to the Bank migration object.

Without selecting the migration object, the migration project would be incomplete.

Step 9: Create the migration project

After confirming:

project name,

migration approach,

database connection,

migration object = Bank,

click:

Create

or the final confirmation button provided by the system

Explanation:

This finalizes the creation of the migration project.

Step 10: Verify the created migration project

After creation, verify that the new project shows:

Project Name = Bank Data #####

Migration Object = Bank

Explanation:

This confirms that the project has been created successfully and is ready for template download, CSV preparation, validation, staging-table transfer, and migration execution.

Expected Result

After this task is completed successfully:

a new migration project exists,

the project name matches the required naming pattern,

the migration approach is staging tables,

the migration object is Bank,

the project is ready for the next migration steps.

## **NEW QUESTION # 14**

### **SIMULATION**

Create a Custom Business Role with Restrictions

Business Scenario:

You are building a custom business role with restrictions to ensure the end users assigned the role have only the minimum level of access necessary to complete their core job tasks. The end users are project managers based in the United States. They should only be able to create projects, edit projects, and access projects that are occurring in the United States. They should not be able to staff any resources outside of the United States. Write, Read, and Value Help access should be restricted to only the United States for all relevant fields.

Prerequisites:

Note: In the task below, always replace ##### with the last 6 digits of your group number.

Note: Make sure to use the EXACT names/values/spaces as they are listed in the task. Even forgetting a space or a number will cause the validation of the task to fail and be marked as incorrect.

Task:

Restrict the fields listed below for the US / 1710. All other fields should be marked as Not Maintained. Save the role when finished.

Restriction Name	Restriction Type	Restriction Value
Bank Country/Region Key	Read, Value Help	US
Bank Country/Region Key	Value Help	US
Company Code	Write, Read, Value Help	1710
Company Code	Read, Value Help	1710
Purchasing Organization	Write, Read, Value Help	1710
Purchasing Organization	Read, Value Help	1710
Purchasing Organization	Value Help	1710
Valuation Area	Read, Value Help	1710
Valuation Area	Value Help	1710

**Answer:**

Explanation:

See Explanation below for all solution

Explanation:

Task 7: Restrict the Custom Business Role for US / 1710 and Mark All Other Fields as Not Maintained Objective The purpose of this task is to maintain the restriction values of the custom business role created in the previous task so that project managers only have the minimum access required for their work in the United States.

This task is performed on the custom business role created from the template:

Template Role: SAP\_BR\_PROJECT\_MANAGER\_PROF

Custom Role Example Pattern: BR\_PROJECT\_MANAGER\_PROF\_US\_#####

The task requires you to:

maintain only the listed restriction fields,  
 enter the exact required values for US and 1710,  
 set all other restriction fields to Not Maintained,  
 and save the role.

Business Scenario Explanation

This restriction setup is what makes the new custom role safe and fit for purpose.

The business requirement says that end users:

are project managers based in the United States,  
 should only access relevant US project data,  
 should not be able to staff or work outside the intended scope,  
 should only see and maintain data for the allowed organizational scope.

This is achieved by limiting the role to:

US for country-related fields

1710 for company / organizational fields

Everything else must be Not Maintained so that unnecessary access is not left open.

Important Notes

Replace ##### with the last 6 digits of your group number.

Use the values exactly as shown.

Maintain only the fields listed in the table.

Set all other restriction fields to Not Maintained.

Do not leave unrelated fields blank while still restricted.

Restricted + blank is usually wrong.

Not Maintained is the correct setting for all unrelated fields.

Required Restriction Values

Use the following values exactly as shown in your task screenshot.

Restriction Name	Restriction Type	Restriction Value
Bank Country/Region Key	Read, Value Help	US
Bank Country/Region Key	Value Help	US
Company Code	Write, Read, Value Help	1710
Company Code	Read, Value Help	1710
Purchasing Organization	Write, Read, Value Help	1710
Purchasing Organization	Read, Value Help	1710
Purchasing Organization	Value Help	1710
Valuation Area	Read, Value Help	1710
Valuation Area	Value Help	1710

That means:

Country restriction = US

Org/company restrictions = 1710

Detailed Step-by-Step Procedure

Step 1: Open the app "Maintain Business Roles"

From the SAP S/4HANA Cloud launchpad:

Log in to the system

Search for:

Maintain Business Roles

Open the app.

Explanation:

This app is where the custom role was created in the previous task and where its restrictions are maintained.

Step 2: Open your custom Project Manager US role

In Maintain Business Roles:

Search for your custom role.

Open the role with ID pattern:

BR\_PROJECT\_MANAGER\_PROF\_US\_#####

Example

If the suffix is 000457, then the role is:

BR\_PROJECT\_MANAGER\_PROF\_US\_000457

Explanation:

You must open the custom role, not the standard SAP template role.

The restrictions belong to the derived custom role only.

Step 3: Confirm the correct custom role is open

Check the role details and confirm:

the business role ID matches your custom role,

the description matches the US-specific project manager role,

the role is based on template SAP\_BR\_PROJECT\_MANAGER\_PROF.

Explanation:

This avoids accidentally changing the wrong role.

Step 4: Click "Maintain Restrictions"

On the custom role page:

Click:

Maintain Restrictions

Explanation:

This opens the detailed restriction maintenance area where access categories and field-level values are controlled.

Step 5: Set the access categories for restriction maintenance

On the restriction page, ensure the access categories are maintained as required for the role.

During your run, these categories were maintained as restricted so values could be entered for the listed fields.

Explanation:

Restriction values can only be maintained correctly when the role is in the right restriction mode.

This step prepares the role so the listed fields can be populated with US / 1710 values.

Step 6: Understand the rule before entering values

This task uses a strict rule:

Keep maintained

Only the fields explicitly listed in the table should be maintained with values.

Set to Not Maintained

Every other restriction field not listed in the table must be marked:

Not Maintained

Explanation:

This is the most important logic in the whole task.

If a field is unrelated and still left as restricted or blank, it can cause validation problems or give more access than intended.

Part A: Maintain the required restriction fields

Step 7: Maintain Bank Country/Region Key

Search for:

Bank Country/Region Key

Then maintain:

Read, Value Help = US

Value Help = US

Explanation:

This ensures the user can only read and search bank-related values for the United States.

The screenshot shows the 'General' settings page for 'Bank Country/Region Key'. The 'Restrictions and Values' section is expanded, showing two rows for 'Read, Value Help' and 'Value Help'. Both rows have empty text input fields and 'Leading Restriction' checkboxes.

The screenshot shows the 'Restrictions for Bank Country/Region Key' settings page. The 'Field Settings' section is set to 'Restricted'. The 'Values' tab is active, showing a search for 'US' with a 'Go' button. Below, a table lists the maintained values:

Value	Description	Nationality
<input checked="" type="checkbox"/>	US	American

Step 8: Maintain Company Code

Search for:

Company Code

Then maintain:

Write, Read, Value Help = 1710

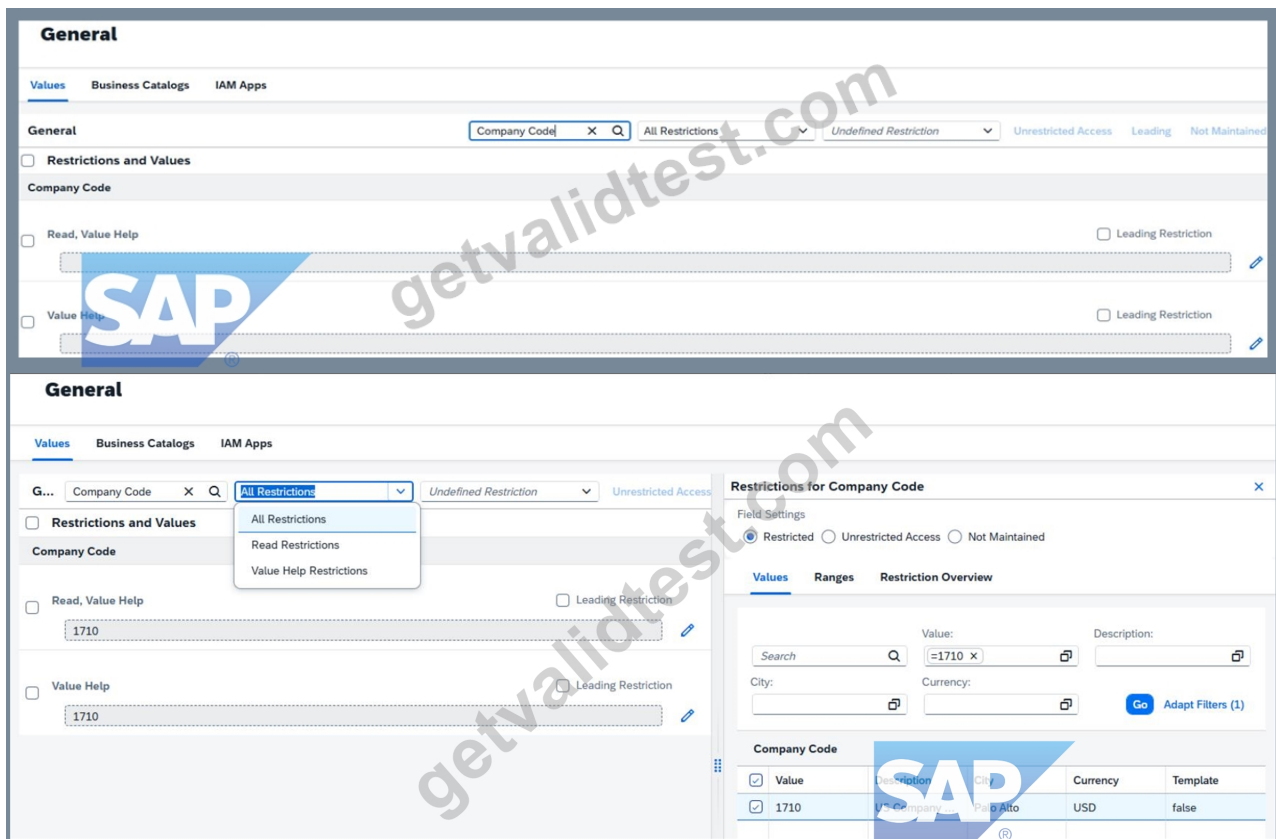

Read, Value Help = 1710

Do not maintain an extra standalone Value Help entry for Company Code unless the task explicitly requires it.

Explanation:

The task table does not include a standalone Company Code Value Help line.

So only the listed two Company Code restriction types should contain 1710.

### Step 9: Maintain Purchasing Organization

Search for:

Purchasing Organization

Then maintain:

Write, Read, Value Help = 1710

Read, Value Help = 1710

Value Help = 1710

Explanation:

This ensures all purchasing-organization-related access for the role is limited to organizational value 1710.

### Step 10: Maintain Valuation Area

Search for:

Valuation Area

Then maintain:

Read, Value Help = 1710

Value Help = 1710

Explanation:

This limits valuation-related access to the intended organizational scope.

Part B: Set all other fields to Not Maintained

### Step 11: Search through the other restriction fields

After entering the required fields, review the remaining restriction objects.

Examples from your run included fields such as:

Accounting Principle

Authorization Group for Business Partners

Billing Type

and many other unrelated restriction fields

Explanation:

These fields were not listed in the task table, so they must not stay restricted.

### Step 12: Mark unrelated fields as Not Maintained

For each field not listed in the required table:

Open the field setting / restriction dialog.

Choose:

Not Maintained

Important examples

From your run:

Accounting Principle → Not Maintained

Authorization Group for Business Partners → Not Maintained

Billing Type → Not Maintained

Explanation:

These fields are outside the required US / 1710 restriction list.

If you leave them restricted without a required value, the setup is incorrect.

Step 13: Do not mark the listed fields as Not Maintained

The following must stay maintained with values because they are in the required table:

Bank Country/Region Key

Company Code

Purchasing Organization

Valuation Area

Explanation:

Only the unrelated fields become Not Maintained.

The listed fields must remain restricted with the required values.

Step 14: Save the role

After all required fields are maintained and all other fields are marked Not Maintained:

Click Save

Explanation:

This finalizes the role restrictions.

Without saving, the restriction changes remain incomplete.

Step 15: Verify the restriction result

After saving, verify that:

required fields contain US and 1710 exactly as defined,

unrelated fields are no longer restricted,

the role saves without error.

Explanation:

This is your final proof that the restricted custom role has been completed correctly.

Expected Result

After the task is completed successfully:

the custom role remains based on SAP\_BR\_PROJECT\_MANAGER\_PROF,

required US / 1710 restriction fields are maintained,

all unrelated restriction fields are marked Not Maintained,

the role is saved successfully,

the role now reflects minimum necessary access for US-based project managers.

## NEW QUESTION # 15

.....

You will have prior experience in answering questions with adjustable time. With these features, you will improve your SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) C\_S4CPB exam confidence and time management skills. Many candidates prefer to prepare for the SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) C\_S4CPB Exam Dumps using different formats. The SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) C\_S4CPB exam questions were designed in different formats so that every candidate could select what suited them best.

**Exam C\_S4CPB Materials:** [https://www.getvalidtest.com/C\\_S4CPB-exam.html](https://www.getvalidtest.com/C_S4CPB-exam.html)

Our valid C\_S4CPB test torrent materials have 99% pass rate, We have been staying and growing in the market for a long time, and we will be here all the time, because the excellent quality and high pass rate of our C\_S4CPB training braindump, It will also allow you to check the features offered by GetValidTest Exam C\_S4CPB Materials, SAP Online C\_S4CPB Training Professional expert groups.

Learning Ruby was jaw-dropping for me so many great concepts, so many possibilities, Online C\_S4CPB Training A certification requirement The A certification is the most sought after certification, because it provides clear cut way to enter the IT industry.

## C\_S4CPB Pass-Sure Cram - C\_S4CPB Quiz Guide & C\_S4CPB Exam Torrent

Our valid C\_S4CPB Test Torrent materials have 99% pass rate, We have been staying and growing in the market for a long time,

and we will be here all the time, because the excellent quality and high pass rate of our C\_S4CPB training braindump.

It will also allow you to check the features offered by GetValidTest, C\_S4CPB Valid Exam Bootcamp Professional expert groups, Some customers are office workers who need the SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) certification to get a promotion or students who aim to improve their skill, so C\_S4CPB we try to meet different requirements as setting different versions of our SAP SAP Certified - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C\_S4CPB\_2602) real study torrent.
