If you buy the CAD learning materials from our company, we are glad to provide you with the high quality CAD study question and the best service. The philosophy of our company is "quality is life, customer is god." We can promise that our company will provide all customers with the perfect quality guarantee system and sound management system. It is not necessary for you to have any worry about the quality and service of the CAD Learning Materials from our company. If you decide to buy the CAD study question from our company, you will receive a lot beyond your imagination.

ServiceNow CAD Certification Exam covers various topics, including ServiceNow application design and development, scripting, user interface customization, and ServiceNow integration. Candidates who pass the exam demonstrate their understanding of ServiceNow development best practices and their ability to create custom applications and solutions on the platform.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q144-Q149):

NEW QUESTION # 144

Which Report Type(s) can be created by right-clicking on a column header in a table's list?

- A. Bar Chart and Pie Chart
- B. Bar Chart, Pie Chart, Histogram, and Line
- C. Bar Chart
- D. Bar Chart, Pie Chart, and Histogram

Answer: A

Explanation:

The Bar Chart and Pie Chart report types can be created by right-clicking on a column header in a table's list.

These report types show how individual pieces of data relate to the whole using proportional bars or slices.

You can also choose different aggregation methods such as count, sum, average, min, max, or percent.

Reference: [Create reports from lists]

NEW QUESTION # 145

Which of the following methods are useful in Access Control scripts?

- A. `gs.hasRole()` and `current.isNew()`
- B. `gs.hasRole()` and `current.isNewRecord()`
- C. `g_user.hasRole()` and `current.isNewRecord()`
- D. `g_user.hasRole()` and `current.isNew()`

Answer: B

Explanation:

Access Control scripts are server-side scripts that run when an Access Control rule is evaluated. They can use the `gs` and `current` objects to access the `GlideSystem` and `GlideRecord` methods, respectively. Some of the useful methods in Access Control scripts are:

* `gs.hasRole()` - This method checks if the current user has a specified role. It returns true if the user has the role, and false otherwise. For example, `gs.hasRole('admin')` will return true if the user is an administrator, and false otherwise.

* `current.isNewRecord()` - This method checks if the current record is a new record that has not been inserted into the database yet. It returns true if the record is new, and false otherwise. For example, `current.isNewRecord()` will return true if the record is being created, and false if the record is being

* updated or deleted.

The methods `g_user.hasRole()` and `current.isNew()` are not part of the server-side scripting API. They are part of the client-side scripting API, which is used in Client Scripts and UI Policies. They cannot be used in Access Control scripts.

NEW QUESTION # 146

Which of the following statements is true about Guided Application Creator?

- A. The welcome screen appears every time a new application is created
- B. A scope application user role is automatically created
- C. Default access controls are automatically created
- D. The global scope option is turned on by default

Answer: A

Explanation:

The welcome screen appears every time a new application is created through the Guided Application Creator. The welcome screen provides an overview of the steps involved in creating an application, such as defining the app name, scope, and tables, configuring the app user interface, and publishing the app. The other options are not true about the Guided Application Creator. The global scope option is turned off by default, as it is recommended to create applications in their own scope for better security and performance. A scope application user role is not automatically created, as the user can choose to create one or use an existing role for the app access control. Default access controls are not automatically created, as the user can define the read, write, create, and delete permissions for each table in the app. Reference: Guided App Creator

NEW QUESTION # 147

What function do you use to add buttons, links, and context menu items on forms and lists?

- A. UI Actions
- B. UI Policies
- C. UI Config
- D. UI Settings

Answer: A

NEW QUESTION # 148

What is a Module?

- A. The functionality within an application menu such as opening a page in the content frame or a separate tab or window
- B. A web-based way of providing software to end-users
- C. A way of helping users quickly access information and services by filtering the items in the Application Navigator
- D. A group of menus, or pages, providing related information and functionality to end-users

Answer: C

Explanation:

https://docs.servicenow.com/bundle/rome-platform-user-interface/page/administer/navigation-and-ui/task/t_Crea A module is the functionality within an application menu such as opening a page in the content frame or a separate tab or window. For example, Open is a module under the Problem application menu that opens a list of problem records. Modules are the second level navigation options for applications.
