## In-depth of Questions Microsoft 100% AZ-120 Accuracy

Once you purchase our windows software of the AZ-120 training engine, you can enjoy unrestricted downloading and installation of our AZ-120 study guide. You need to reserve our installation packages of our AZ-120 learning guide in your flash disks. Then you can go to everywhere without carrying your computers. For it also supports the offline practice. And the best advantage of the software version is that it can simulate the real exam.

## Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q14-Q19):

### NEW QUESTION # 14

You have an on-premises SAP environment that uses AIX servers and IBM DB2 as the database platform. You plan to migrate SAP to Azure. In Azure, the SAP workloads will use Windows Server and Microsoft SQL Server as the database platform.

What should you use to export from DB2 and import the data to SQL Server?

- A. R3load
- B. R3trans
- C. SQL Server Management Studio (SSMS)
- D. Azure SQL Data Warehouse

**Answer: A**

Explanation:

Both R3load and SSMA can be used to migrate from DB2 to SQL Server. In the options there is not SSMA, but SSMS, the SSMS cannot be use to migrate DB2 to SQL Server. please refer to:

<https://techcommunity.microsoft.com/t5/running-sap-applications-on-the/sap-os-db-migration-to-sql-server-faq/b>

### NEW QUESTION # 15

You plan to migrate an SAP environment to Azure.

You need to design an Azure network infrastructure to meet the following requirements:

- \* Prevent end users from accessing the database servers.
- \* Isolate the application servers from the database servers.
- \* Ensure that end users can access the SAP systems over the Internet.
- \* Minimize the costs associated to the communications between the application servers and database servers.

Which two actions should you include in the solution? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Configure an internal Azure Standard Load Balancer for incoming connections.
- B. Configure Azure Traffic Manager to route incoming connections.
- C. Segregate the SAP application servers and database servers by using Azure virtual networks.
- **D. Create a site-to-site VPN between the on-premises network and Azure.**
- **E. In the same Azure virtual network, segregate the SAP application servers and database servers by using different subnets and network security groups.**

**Answer: D,E**

### NEW QUESTION # 16

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation

Box 1: Yes

The SAP Azure Enhanced Monitoring Extension builds on top of the Azure Diagnostic extension, which stores its data in an Azure Storage account that you specify.

Box 2: Yes

The Set-AzVMAEMExtension cmdlet updates the configuration of a virtual machine to enable or update the support for monitoring for SAP systems that are installed on the virtual machine. The cmdlet installs the Azure Enhanced Monitoring (AEM) extension that collects the performance data and makes it discoverable for the SAP system.

The -OSType specifies the OS. Either Windows or Linux.

Box 3: Yes

### NEW QUESTION # 17

You have an SAP environment on Azure.

You use Azure Site Recovery to protect an SAP production landscape.

You need to validate whether you can recover the landscape in the event of a failure. The solution must minimize the impact on the landscape.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer

area and arrange them in the correct order.

**Answer:**

Explanation:

Explanation

Step 1: Create a virtual network...

We recommend that for test failover, you choose a network that's isolated from the production recovery site network specific in the Compute and Network settings for each VM. By default, when you create an Azure virtual network, it is isolated from other networks. The test network should mimic your production network:

The test network should have same number of subnets as your production network. Subnets should have the same names.

The test network should use the same IP address range.

Step 2: Add a public IP address...

Because Site Recovery does not replicate the cloud witness, we recommend that you deploy the cloud witness in the disaster recovery region.

Step 3: Shut down production virtual machines

Make sure that the primary VM is shut down when you run the test failover. Otherwise there will be two VMs with the same identity, running in the same network at the same time. This can lead to unexpected consequences.

Step 4: Select Test failover from the Recovery Plans blade

**NEW QUESTION # 18**

You deploy an SAP environment on Azure.

You need to configure SAP NetWeaver to authenticate by using Azure Active Directory (Azure AD).

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Answer:**

Explanation:

**NEW QUESTION # 19**

.....

For customers who are bearing pressure of work or suffering from career crisis, Planning and Administering Microsoft Azure for SAP Workloads learn tool of inferior quality will be detrimental to their life, render stagnancy or even cause loss of salary. So choosing appropriate AZ-120 test guide is important for you to pass the exam. One thing we are sure, that is our AZ-120 Certification material is reliable. With our high-accuracy AZ-120 test guide, our candidates can grasp the key points, and become sophisticated with the exam content. You only need to spend 20-30 hours practicing with our Planning and Administering Microsoft Azure for SAP Workloads learn tool, passing the exam would be a piece of cake.
