EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q20-Q25):

NEW QUESTION # 20

Question:

Refer to the Exhibit (Port marked "X"): What type of FC port does the "X" represent?

- A. N port
- B. E_port
- C. NL port
- D. F_port

Answer: B

Explanation:

The exhibit shows a Fibre Channel (FC) switch connected to another FC switch. The port "X" is used for inter-switch link (ISL) connectivity, which is characteristic of an E_port (Expansion Port).

- * F_port (Fabric port): Connects an N_port (host or storage device) to a switch.
- * N_port (Node port): End device port in FC networks (like HBA in hosts or storage).
- * NL_port (Node Loop port): Used for Arbitrated Loop topologies.

* E_port: Connects two FC switches together for ISL, which is exactly what's shown in the exhibit.

NEW QUESTION # 21

Question:

A company is concerned about the risk of data loss due to accidental deletion and hardware failures. What is the primary reason for implementing a data backup solution?

- A. To improve application performance
- B. To reduce the usage of archive storage
- C. To reduce storage costs
- D. To maintain business continuity

Answer: D

Explanation:

The primary purpose of a data backup solution is to maintain business continuity by ensuring data can be restored in case of accidental deletion, hardware failure, or data corruption.

- * Not to reduce storage costs: Archiving and tiering handle that.
- * Not to improve application performance: Backup processes typically don't enhance live performance.
- * Not to reduce archive usage: Backup and archive have different use cases.

NEW QUESTION # 22

Question:

An organization needs to adhere to compliance and lower the cost of the primary storage. What process should they implement?

- A. Data archiving
- B. Data compression
- C. Data encryption
- D. Data backup

Answer: A

Explanation:

Data archiving involves moving infrequently accessed data to a separate storage system, freeing up space on primary storage and reducing costs. It also aids in compliance by retaining data for specified periods, as required by various regulations.

- * Data backup: Creates copies of data for recovery purposes but doesn't necessarily reduce primary storage usage.
- * Data archiving: Moves less frequently accessed data to cost-effective storage, aiding compliance and reducing primary storage costs.

* Data encryption: Secures data but doesn't impact storage costs or compliance retention.

* Data compression: Reduces data size but may not meet compliance requirements for data retention.

NEW QUESTION # 23

Question:

Which RAID level consists of two disk drives and every write is written to both disks?

- A. RAID 6
- **B. RAID 1**
- C. RAID 1+0
- D. RAID 5

Answer: B

Explanation:

RAID 1 is disk mirroring. It writes identical copies of data to two disks simultaneously, providing redundancy.

* Minimum of 2 disks (no parity, no striping).

* Excellent read performance, write performance equivalent to a single disk.

* Provides fault tolerance because data is duplicated.

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: RAID Levels.

NEW QUESTION # 24

Question:

(Refer to exhibit diagram)

The diagram shows a SAN zoning configuration with three zones: Zone 1 (Mixed), Zone 2 (WWN), and Zone 3 (Port). Which zoning type is used in Zone 2?

- A. No zoning
- B. Port zoning
- C. Mixed zoning
- **D. WWN zoning**

Answer: D

Explanation:

WWN zoning uses the World Wide Names (unique identifiers) of devices (HBAs and targets) to define zone membership.

Offers flexibility: devices can be moved to different ports without reconfiguring zoning.

Common in modern SAN environments.

* Port zoning uses physical port numbers for zone membership.

* Mixed zoning combines port and WWN methods.

* No zoning would not segment traffic.
