

2026 Well 300-710 Prep & Securing Networks with Cisco Firepower Unparalleled Exam Forum

BTW, DOWNLOAD part of Pass4sures 300-710 dumps from Cloud Storage: <https://drive.google.com/open?id=1odkzPS5XjXcduFvzbEjps21GY0kTlSS5>

As far as the 300-710 practice test are concerned, these 300-710 practice questions are designed and verified by the experience and qualified Cisco 300-710 exam trainers. They work together and strive hard to maintain the top standard of 300-710 exam practice questions all the time. So you rest assured that with the Cisco 300-710 Exam Dumps you will ace your Cisco 300-710 exam preparation and feel confident to solve all questions in the final Cisco 300-710 exam.

Cisco Firepower NGFW is one of the most widely used security solutions in the market, offering advanced threat protection and network visibility across physical, virtual, and cloud environments. As cyber threats continue to evolve and become more sophisticated, organizations need skilled professionals who can implement, manage, and optimize Firepower NGFW solutions to protect their networks and assets. The 300-710 Exam validates the knowledge and skills required for this critical role, including configuring and troubleshooting Firepower NGFW devices, implementing access control policies, and using advanced security features to detect and prevent cyber attacks.

First-grade Well 300-710 Prep – Pass 300-710 First Attempt

You will need to pass the Cisco 300-710 exam to achieve the Securing Networks with Cisco Firepower (300-710) certification. Due to extremely high competition, passing the Securing Networks with Cisco Firepower (300-710) exam is not easy; however, possible. You can use Pass4sures products to pass the Securing Networks with Cisco Firepower (300-710) exam on the first attempt. The Securing Networks with Cisco Firepower (300-710) practice exam gives you confidence and helps you understand the criteria of the testing authority and pass the Securing Networks with Cisco Firepower (300-710) exam on the first attempt.

What is the duration, language, and format of Securing Networks with Cisco Firepower (300-710 SNCF) Exam

- Format: Multiple choice
- Validity: 3 years
- Language of Exam: English, Japanese
- Duration of Exam: 90 minutes

Cisco Securing Networks with Cisco Firepower Sample Questions (Q70-Q75):

NEW QUESTION # 70

An engineer is configuring a second Cisco FMC as a standby device but is unable to register with the active unit. What is causing this issue?

- A. The licensing purchased does not include high availability
- B. There is only 10 Mbps of bandwidth between the two devices.
- **C. The code versions running on the Cisco FMC devices are different**
- D. The primary FMC currently has devices connected to it.

Answer: C

Explanation:

<https://www.cisco.com/c/en/us/td/docs/security/firepower/620/configuration/guide/fpmc-config-guide-v62/firepo>

NEW QUESTION # 71

What is the benefit of selecting the trace option for packet capture?

- **A. The option indicates whether the packet was dropped or successful.**
- B. The option indicated whether the destination host responds through a different path.
- C. The option limits the number of packets that are captured.
- D. The option captures details of each packet.

Answer: A

Explanation:

Packet capture is available with the trace option, which provides you with a verdict as to whether the packet is dropped or successful.

https://www.cisco.com/c/en/us/td/docs/security/firepower/650/configuration/guide/fpmc-config_guide-v65/troubleshooting_the_system.html#:~:text=Packet%20capture%20is%20available%20with%20the%20trace%20option%2C%20which%20provides%20you%20with%20a%20verdict%20as%20to%20whether%20the%20packet%20is%20dropped%20or%20successful

NEW QUESTION # 72

A mid-sized company is experiencing higher network bandwidth utilization due to a recent acquisition. The network operations team is asked to scale up their one Cisco FTD appliance deployment to higher capacities due to the increased network bandwidth. Which design option should be used to accomplish this goal?

- A. Deploy multiple Cisco FTD HA pairs to increase performance
- **B. Deploy multiple Cisco FTD appliances in firewall clustering mode to increase performance.**
- C. Deploy multiple Cisco FTD appliances using VPN load-balancing to scale performance.
- D. Deploy multiple Cisco FTD HA pairs in clustering mode to increase performance

Answer: B

Explanation:

https://www.cisco.com/c/en/us/td/docs/security/firepower/fxos/clustering/ftd-cluster-solution.html#concept_C8502505F840451C9E600F1EED9BC18E

NEW QUESTION # 73

A company is deploying Cisco Secure Endpoint private cloud. The Secure Endpoint private cloud instance has already been deployed by the server administrator. The server administrator provided the hostname of the private cloud instance to the network engineer via email. What additional information does the network engineer require from the server administrator to be able to make the connection to Secure Endpoint private cloud in Cisco Secure Firewall Management Centre?

- A. Internet access for the Secure End point private cloud to reach the Secure Endpoint public cloud
- B. IP address and port number for the connection proxy
- C. Username and password to the Secure Endpoint private cloud instance
- **D. SSL certificate for the Secure Endpoint ormate cloud instance**

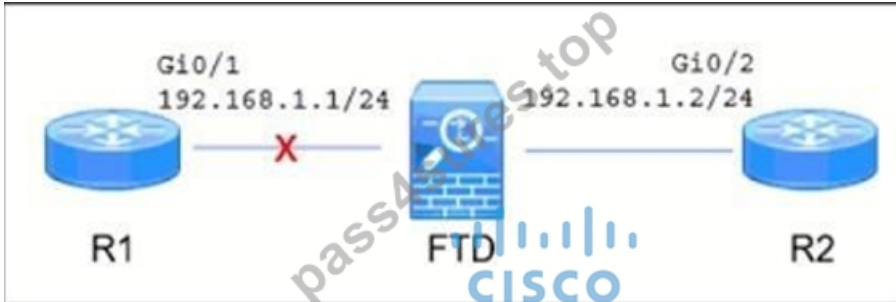

Answer: D

Explanation:

When integrating Cisco Secure Endpoint (formerly AMP for Endpoints) private cloud with Cisco Secure Firewall Management Center (FMC), the FMC needs to establish a secure HTTPS connection to the Secure Endpoint private cloud instance. Even though the hostname has already been provided, the SSL certificate is also required for trust establishment during the connection setup. The certificate allows FMC to validate the identity of the Secure Endpoint private cloud instance and ensure that communication is encrypted and secure.

NEW QUESTION # 74

Refer to the exhibit. A Cisco Secure Firewall Threat Defense (FTD) device is deployed in inline mode with an inline set. The network engineer wants router R2 to remove the directly connected route 192.168.1.0/24 from its routing table when the cable between router R1 and the Secure FTD device is disconnected. Which action must the engineer take?

- A. Establish a routing protocol between R1 and R2.
- B. Implement autostate functionality on the Gi0/2 interface of R2
- **C. Implement the Propagate Link State option on the Secure FTD device**
- D. Disable hardware bypass on the Secure FTD device.

Answer: C

Explanation:

To ensure that router R2 removes the directly connected route for 192.168.1.0/24 from its routing table when the cable between router R1 and the Secure FTD device is disconnected, the network engineer must implement the "Propagate Link State" option on the Secure FTD device. This option allows the FTD to propagate the link state changes to adjacent devices, ensuring that the disconnection is recognized and the routing table is updated accordingly.

Steps:

Access the FTD device configuration via FMC.

Navigate to the interface settings for the relevant interfaces.

Enable the "Propagate Link State" option for the interfaces connected to R1 and R2.

Deploy the changes to the FTD device.

This configuration ensures that the link state changes are communicated to router R2, prompting it to remove the disconnected route from its routing table.
