Hundreds of IT aspirants have cracked the Certified Threat Intelligence Analyst 312-85 examination by just preparing with our real test questions. If you also want to become a ECCouncil 312-85 certified without any anxiety, download Network Security Specialist 312-85 updated test questions and start preparing today. These real 312-85 Dumps come in desktop practice exam software, web-based practice test, and ECCouncil 312-85 PDF document. Below are specifications of these three formats.

The Certified Threat Intelligence Analyst (CTIA) certification exam offered by the ECCouncil is a highly sought-after certification in the field of cybersecurity. Certified Threat Intelligence Analyst certification is designed to equip cybersecurity professionals with the necessary skills and knowledge to identify and mitigate potential threats to an organization's digital assets. The CTIA certification exam tests the candidate's ability to analyze and interpret threat data, as well as their proficiency in using various intelligence tools to gather and analyze data.

312-85 Exam Bible, 312-85 Valid Exam Simulator

It is of no exaggeration to say that sometimes a certification is exactly a stepping-stone to success, especially when you are hunting for a job. The 312-85 study materials are of great help in this sense. People with initiative and drive all want to get a good job, and if someone already gets one, he or she will push for better position and higher salaries. With the 312-85 test training, you can both have the confidence and gumption to ask for better treatment. To earn such a material, you can spend some time to study our 312-85 study torrent. No study can be done successfully without a specific goal and a powerful drive, and here to earn a better living by getting promotion is a good one.

ECCouncil Certified Threat Intelligence Analyst Sample Questions (Q58-Q63):

NEW QUESTION # 58

Flora, a threat intelligence analyst at PanTech Cyber Solutions, is working on a threat intelligence program. She is trying to collect the company's crucial information through online job sites.

Which of the following information will Flora obtain through job sites?

- **A. Hardware and software information, network-related information, and technologies used by the company**
- B. Open ports and services
- C. Top-level domains and subdomains of the company

Answer: A

Explanation:

When attackers or analysts search job postings on online job portals, they often uncover technical details inadvertently shared by organizations.

Job listings frequently mention:

* Hardware and software used (e.g., "experience with Cisco firewalls, Windows Server 2019").

* Network details and tools (e.g., "knowledge of LAN/WAN, AWS, Azure").

* Security technologies (e.g., "SIEM tools like Splunk or QRadar").

This information can help analysts identify the technological footprint of the company, which is valuable during threat profiling or reconnaissance.

Why the Other Options Are Incorrect:

* B. Top-level domains and subdomains: Obtained through DNS enumeration tools, not job sites.

* C. Open ports and services: Found through active scanning tools like Nmap, not via job postings.

Conclusion:

Flora can obtain hardware, software, and network-related information from online job listings.

Final Answer: A. Hardware and software information, network-related information, and technologies used by the company

Explanation Reference (Based on CTIA Study Concepts):

CTIA recognizes online job sites as OSINT sources that can reveal technical environment details about organizations.

NEW QUESTION # 59

In which of the following attacks does the attacker exploit vulnerabilities in a computer application before the software developer can release a patch for them?

- A. Distributed network attack
- **B. Zero-day attack**
- C. Active online attack
- D. Advanced persistent attack

Answer: B

Explanation:

A zero-day attack exploits vulnerabilities in software or hardware that are unknown to the vendor or for which a patch has not yet been released. These attacks are particularly dangerous because they take advantage of the window of time between the vulnerability's discovery and the availability of a fix, leaving systems exposed to potential exploitation. Zero-day attacks require a proactive and comprehensive approach to security, including the use of advanced threat detection systems and threat intelligence to identify and mitigate potential threats before they can be exploited. NEW QUESTION # 60

Sam works as an analyst in an organization named InfoTech Security. He was asked to collect information from various threat intelligence sources. In meeting the deadline, he forgot to verify the threat intelligence sources and used data from an open-source data provider, who offered it at a very low cost. Through it was beneficial at the initial stage but relying on such data providers can produce unreliable data and noise putting the organization network into risk.

What mistake Sam did that led to this situation?

- A. Sam did not use the proper standardization formats for representing threat data.
- B. Sam used unreliable intelligence sources.
- C. Sam used data without context.
- **D. Sam did not use the proper technology to use or consume the information.**

Answer: D

NEW QUESTION # 61

Bob, a threat analyst, works in an organization named TechTop. He was asked to collect intelligence to fulfil the needs and requirements of the Red Team present within the organization.

Which of the following are the needs of a RedTeam?

- A. Intelligence that reveals risks related to various strategic business decisions
- B. Intelligence extracted latest attacks analysis on similar organizations, which includes details about latest threats and TTPs
- **C. Intelligence on latest vulnerabilities, threat actors, and their tactics, techniques, and procedures (TTPs)**
- D. Intelligence related to increased attacks targeting a particular software or operating system vulnerability

Answer: C

Explanation:

Red Teams are tasked with emulating potential adversaries to test and improve the security posture of an organization. They require intelligence on the latest vulnerabilities, threat actors, and their TTPs to simulate realistic attack scenarios and identify potential weaknesses in the organization's defenses. This information helps Red Teams in crafting their attack strategies to be as realistic and relevant as possible, thereby providing valuable insights into how actual attackers might exploit the organization's systems. This need contrasts with the requirements of other teams or roles within an organization, such as strategic decision-makers, who might be more interested in intelligence related to strategic risks or Blue Teams, which focus on defending against and responding to attacks.

NEW QUESTION # 62

Mr. Bob, a threat analyst, is performing analysis of competing hypotheses (ACH). He has reached to a stage where he is required to apply his analysis skills effectively to reject as many hypotheses and select the best hypotheses from the identified bunch of hypotheses, and this is done with the help of listed evidence. Then, he prepares a matrix where all the screened hypotheses are placed on the top, and the listed evidence for the hypotheses are placed at the bottom.

What stage of ACH is Bob currently in?

- A. Refinement
- **B. Diagnostics**
- C. Evidence
- D. Inconsistency

Answer: B

NEW QUESTION # 63
