Zscaler Digital Transformation Administrator Sample Questions (Q116-Q121):

NEW QUESTION # 116

What is a ZIA Sublocation?

- A. A way to separate generic traffic from that coming from Client Connector
- B. Every one of the sections in a Corporate Location that use overlapping IP addresses
- C. The section of a corporate Location used to separate traffic, like traffic from employees from guest traffic**
- D. The section of a corporate Location that sends traffic to a Subcloud

Answer: C

Explanation:

AZIA Sublocation is defined as a subsection of a corporate Location that is used to separate different types of traffic, such as traffic from employees versus guest traffic. This segmentation allows granular application of policies and better control over different user groups within the same corporate location. Sublocations help in organizing and managing traffic flows for better policy enforcement and reporting.

NEW QUESTION # 117

You've configured the API connection to automatically download Microsoft Information Protection (MIP) labels into ZIA; where will you use these imported labels to protect sensitive data in motion?

- A. Creating a File Type Control Policy.
- B. Creating a SaaS Security Posture Control Policy.
- C. **Creating a custom DLP Policy.**
- D. Creating a custom DLP Dictionary

Answer: C

Explanation:

Imported MIP labels are applied as matching criteria within a custom DLP Policy, letting ZIA inspect data in motion and enforce actions (block, quarantine, notify) based on the sensitivity label assigned by Microsoft Information Protection.

NEW QUESTION # 118

Which filtering policy blocked access to the Network Application?

- A. **Firewall Filtering**
- B. Sandbox
- C. DLP
- D. Browser Control

Answer: A

Explanation:

Firewall Filtering policies govern network#level application traffic, so access to a Network Application is blocked by a Firewall Filtering rule.

NEW QUESTION # 119

Which of the following connects Zscaler users to the nearest Microsoft 365 servers for a better experience?

- A. Optimized TCP Scaling for maximum throughput of files
- B. **Multiple distributed DNS resolvers providing local results**
- C. Single DNS resolver with forwarders providing centralized results
- D. Private MPLS in each branch office providing connection

Answer: B

Explanation:

Multiple distributed DNS resolvers providing local resultsconnect Zscaler users to the nearest Microsoft 365 servers. This approach ensures users get localized DNS resolution, which directs them to the closest Microsoft 365 endpoint, improving performance and reducing latency.

The study guide highlights the importance of distributed DNS resolution in optimizing cloud application performance for users.

NEW QUESTION # 120

What does the user risk score enable a user to do?

- A. Determine whether or not a user is authorized to view unencrypted data.
- B. **Configure stronger user-specific policies to monitor & control user-level risk exposure.**
- C. Compare the user risk score with other companies to evaluate users vs other companies.
- D. Determine if a user has been compromised

Answer: B

Explanation:

The user risk scoreenables organizations toconfigure stronger user-specific policies to monitor and control user-level risk exposure. This score reflects a user's risk posture based on behaviors and detected anomalies and helps in tailoring security policies to address individual risk levels.

While the score gives insight into user risk, it is primarily designed for adaptive policy enforcement rather than direct compromise detection or cross-company comparison. The study guide highlights that user risk scores drive policy adjustments to better secure user activity.

NEW QUESTION # 121
