TEST 7NC (25/05/2026)

Mark the letter A, B, C, or D on your answer sheet to indicate the word that differs from the other three in the position of the primary stress in each of the following questions.

1. A. generate B. natural C. effective D. energy
2. A. limit B. replace C. panel D. hydro

Mark the letter A, B, C, and D on your answer sheet to indicate the word whose underlined part differs from the other three in pronunciation in each of the following questions.

3. A. biogas B. consumed C. limitg D. preventg
4. A. dgm B. carbon C. harmful D. calm

Choose the best option (A, B, C, or D) to complete each of the following questions.

5. You can save much water by _____
A. using energy saving light bulbs B. using biogas for cooking
C. taking showers instead of baths D. walking or riding a bike to school
6. Over 270 species of land dwelling mammals are _____ to Australia.
A. nationality B. nation C. native D. national
7. It is going to rain any minute now. The children _____ in the rain.
A. are playing B. will playing C. play D. played
8. Recycling means to reuse something. The more we _____, the less energy is needed.
A. recycle B. build C. repair D. reuse
9. Australia is a vast island filled with a rich history, culture and _____.
A. landscape B. location C. view D. Scene
10. Children should avoid _____ foods such as hamburger and snacks.
A. unhealthy B. nutritious C. uncooked D. fresh

Read the following passage and mark the letter A, B, C or D on your answer sheet to indicate option that best fits each numbered blank from 1 to 6.

Once you decide to pass the Fortinet NSE 5 - FortiNAC-F 7.6 Administrator exam and get the certification, you may encounter many handicaps that you don't know how to deal with, so, you may think that it is difficult to pass the exam and get the certification. In order to help you solve these problem and help you pass the exam easy, we compiled such a NSE5_FNC_AD_7.6 exam torrent. We can promise that you will have no regret buying our Fortinet NSE 5 - FortiNAC-F 7.6 Administrator exam dumps. If you are hesitating to buy our NSE5_FNC_AD_7.6 Test Quiz, if you are anxious about whether our product is suitable for you or not, we think you can download the trail version. We believe our Fortinet NSE 5 - FortiNAC-F 7.6 Administrator exam dumps will help you make progress and improve yourself.

If you have a strong desire to get the Fortinet certificate, our NSE5_FNC_AD_7.6 study materials are the best choice for you. At present, the certificate has gained wide popularity. So the official test syllabus of the NSE5_FNC_AD_7.6 exam begins to become complicated. So you must accept professional guidance. After all, lots of people are striving to compete with many candidates. Powerful competitiveness is crucial to pass the NSE5_FNC_AD_7.6 Exam. Our company has mastered the core technology of the NSE5_FNC_AD_7.6 study materials. What's more, your main purpose is to get the certificate quickly and easily. Our goal is to aid your preparation of the NSE5_FNC_AD_7.6 exam. Our study materials are an indispensable helper for you anyway. Please pay close attention to our NSE5_FNC_AD_7.6 study materials.

Here's The Proven And Quick Way To Get Success In Fortinet NSE5_FNC_AD_7.6 Exam

It is universally accepted that in this competitive society in order to get a good job we have no choice but to improve our own capacity and explore our potential constantly, and try our best to get the related NSE5_FNC_AD_7.6 certification is the best way to show our professional ability, however, the exam is hard nut to crack and there are so many NSE5_FNC_AD_7.6 Preparation questions related to the exam, it seems impossible for us to systematize all of the key points needed for the exam by ourselves.

Fortinet NSE 5 - FortiNAC-F 7.6 Administrator Sample Questions (Q41-Q46):

NEW QUESTION # 41

While discovering network infrastructure devices, a switch appears in the inventory topology with a question mark (?) on the icon. What would cause this?

- A. SNMP is not enabled on the switch.
- B. A read-only SNMP community string was used.
- C. The SNMP ObjectID is not recognized by FortiNAC-F.
- D. The wrong SNMP community string was entered during discovery.

Answer: C

Explanation:

In FortiNAC-F, the Inventory topology uses specific icons to represent the status and model of discovered network infrastructure. When a switch or other network device is discovered via SNMP, FortiNAC-F retrieves its System ObjectID (sysObjectID) to identify the specific make and model. This OID is then compared against the internal database of supported device mappings. A question mark (?) icon appearing on a discovered switch indicates that while the discovery process successfully communicated with the device (meaning SNMP credentials were correct), the SNMP ObjectID is not recognized or mapped in the current version of FortiNAC-F. This essentially means the device is "unsupported" by the current software out-of-the-box. Because the OID is unknown, FortiNAC-F does not know which CLI or SNMP command set to use for critical functions like L2 polling (host visibility) or VLAN switching (enforcement). To resolve this, an administrator can manually "Set Device Mapping" to a similar existing model or a "Generic SNMP Device" if only basic L3 visibility is required.

"Discovered devices displaying a '?' icon indicate the currently running version does not have a mapping for that device's System ObjectID (device is not supported). Device mappings are used to manage the device by performing functions such as L2/L3 Polling, Reading, and Switching VLANs." -Fortinet Technical Tip:

Options for devices unable to be modeled in Inventory.

NEW QUESTION # 42

An administrator manages a corporate environment where all users log into the corporate domain each time they connect to the network. The administrator wants to leverage login scripts to use a FortiNAC-F agent to enhance endpoint visibility. Which agent can be deployed as part of a login script?

- A. Passive
- B. Mobile
- C. Dissolvable
- D. Persistent

Answer: D

Explanation:

In a corporate domain environment where "enhanced endpoint visibility" is required, the Persistent Agent is the recommended choice. Unlike the Dissolvable Agent, which is temporary and intended for one-time compliance scans during registration, the Persistent Agent is an "install-and-stay-resident" application.

The Persistent Agent is specifically designed to be distributed through automated enterprise methods, including login scripts, Group Policy Objects (GPO), or third-party software management tools. When deployed via a login script, the agent can be configured to silently install and immediately begin communicating with the FortiNAC-F service interface. Once active, it provides continuous

visibility by reporting host details such as logged-on users, installed applications, and adapter information. It also listens for Windows session events (logon/logoff) to trigger automatic single-sign-on (SSO) registration in FortiNAC-F, ensuring that as soon as a user connects to the domain, their device is identified and assigned the correct network access policy.

"The Persistent Agent can be distributed to Windows domain machines via login script or by any other software distribution method your organization might use. The Persistent Agent remains installed on the host at all times. Once the agent is installed it runs in the background and communicates with FortiNAC at intervals established by the FortiNAC administrator." - FortiNAC-F Administration Guide: Persistent Agent Overview.

NEW QUESTION # 43

Refer to the exhibit.

User/Host Profile Configuration

Name: Contractor Access

Who/What:

Attributes (Satisfy Any of the Following)

Where	Host	Role	Contractor	X	+
OR	Host	Persistent Agent	Yes	X	
AND	Host	Security Access Value	Contractor	X	

RADIUS Attributes (Satisfy Any of the Following)

Groups: Any Any Of All Of None Of

Where

Locations: Any Of All Of None Of

Building 1 First Floor Ports X X

When: Mon, Tue, Wed, Thu, Fri 6:00 AM - 5:00 PM

Notes:

If a host is connected to a port in the Building 1 First Floor Ports group, what must also be true to match this user/host profile?

- A. The host must have a role value of contractor or an installed persistent agent and a security access value of contractor, and be connected between 6 AM and 5 PM.
- B. The host must have a role value of contractor or an installed persistent agent, a security access value of contractor, and be connected between 9 AM and 5 PM.
- C. The host must have a role value of contractor, an installed persistent agent or a security access value of contractor, and be connected between 6 AM and 5 PM.
- D. The host must have a role value of contractor or an installed persistent agent or a security access value of contractor, and be connected between 6 AM and 5 PM.

Answer: A

Explanation:

The User/Host Profile in FortiNAC-F is the fundamental logic engine used to categorize endpoints for policy assignment. As seen in the exhibit, the configuration uses a combination of Boolean logic operators (OR and AND) to define the "Who/What" attributes. According to the FortiNAC-F Administrator Guide, attributes grouped together within the same bracket or connected by an OR operator require only one of those conditions to be met. In the exhibit, the first two attributes are "Host Role = Contractor" OR "Host Persistent Agent = Yes". This forms a single logical block. This block is then joined to the third attribute ("Host Security Access Value = Contractor") by an AND operator. Consequently, a host must satisfy at least one of the first two conditions AND satisfy the third condition to match the "Who/What" section.

Furthermore, the profile includes Location and When (time) constraints. The exhibit shows the location is restricted to the " Building 1 First Floor Ports " group. The " When " schedule is explicitly set to Mon-Fri 6:00 AM - 5:00 PM. For a profile to match, all enabled sections (Who/What, Locations, and When) must be satisfied simultaneously. Therefore, the host must meet the conditional contractor/agent criteria, possess the specific security access value, and connect during the defined 6 AM to 5 PM window. " User/Host Profiles use a combination of attributes to identify a match. Attributes joined by OR require any one to be true, while attributes joined by AND must all be true. If a Schedule (When) is applied, the host must also connect within the specified timeframe for the profile to be considered a match. All criteria in the Who /What, Where, and When sections are cumulative. " - FortiNAC-F Administration Guide: User/Host Profile Configuration.

NEW QUESTION # 44

When creating a device profiling rule, what are two advantages of registering the device in the host view? (Choose two.)

- A. The devices can be associated with a user.
- B. The devices will have connection logs.
- C. The devices can be managed as a generic SNMP device.
- D. The devices can be polled for connection status.

Answer: A,B

Explanation:

In FortiNAC-F, the Device Profiler is a rule-based engine that evaluates unknown "rogue" devices and classifies them based on fingerprints and behavior. When a profiling rule matches a device, the administrator can configure the rule to automatically register that device. The registration process can place the device record in two primary locations: the Topology View (as a device) or the Host View (as a registered host).

According to the FortiNAC-F Administration Guide, registering a device in the Host View provides significant advantages for identity management and historical tracking. First, the devices can be associated with a user (C). In the FortiNAC database architecture, the Host View is the primary repository for endpoint identity; placing a profiled device here allows the system to link that hardware (MAC address) to a specific user account, whether that user is an employee, guest, or a system-level "owner". This association is essential for Role-Based Access Control (RBAC) and for tracking accountability across the network fabric. Second, devices registered in the Host View will have connection logs (B). FortiNAC-F maintains a detailed operational history for all host records, including every instance of the device connecting to or disconnecting from a port, its IP address assignments, and the specific policies applied during each session. These logs are invaluable for troubleshooting connectivity issues and for security forensic audits, as they provide a clear timeline of the device's lifecycle on the network. In contrast, devices managed only in the Topology View are typically treated as infrastructure components where the focus is on device availability rather than individual session history.

"Devices that are registered and associated with a user are placed in the Host View and removed from the Profiled Devices window... Placing a device in the Host View allows for the tracking of connection history and the association of the device with a specific identity or user record within the FortiNAC database." - FortiNAC-F Administration Guide: Device Profiler How it Works.

NEW QUESTION # 45

What must an administrator configure to allow FortiNAC-F to process incoming syslog messages that are not supported by default?

- A. A Security Event Parser
- B. A Security Action
- C. A Syslog Service Connector
- D. A Log Receiver

Answer: A

Explanation:

FortiNAC-F provides a robust engine for processing security notifications from third-party devices. For standard integrations, such as FortiGate or Check Point, the system comes pre-loaded with templates to interpret incoming data. However, when an administrator needs FortiNAC-F to process syslog messages from a vendor or device that is not supported by default, they must configure a Security Event Parser.

The Security Event Parser acts as the translation layer. It uses regular expressions (Regex) or specific field mappings to identify key data points within a raw syslog string, such as the source IP address, the threat type, and the severity. Without a parser, FortiNAC-F may receive the syslog message but will be unable to "understand" its contents, meaning it cannot generate the necessary Security Event required to trigger automated responses. Once a parser is created, the system can extract the host's IP address from the message, resolve it to a MAC address via L3 polling, and then apply the appropriate security rules. This allows for the integration of

any security appliance capable of sending RFC-compliant syslog messages.

"FortiNAC parses the information based on pre-defined security event parsers stored in FortiNAC's database... If the incoming message format is not recognized, a new Security Event Parser must be created to define how the system should extract data fields from the raw syslog message. This enables FortiNAC to generate a security event and take action based on the alarm configuration." - FortiNAC-F Administration Guide: Security Event Parsers.
