

# Valid CPHIMS Exam Pdf, CPHIMS New Dumps Questions

## CPHIMS Exam with Complete Questions and Answers 100% Correct

Which of the following functions are typically performed by a health information management professional?

1. diagnosis and procedure coding
2. system implementation
3. content retention
4. record administration - ANSWER 1, 3, and 4 only

Item #3, system implementation, typically involves hardware, software, network and training. This would not be performed by a health information management professional.

A CIO is hearing from staff members that the team needs additional resources to be successful with maintaining all of the organization's current systems. The MOST appropriate first step for the CIO would be to:

- A. poll each member to understand their thoughts on what skill sets and abilities are needed from the new hires.
- B. review performance indicators and service metrics along with organizational perception of the team's effectiveness.
- C. adjust the departmental budget to allow for the hiring of additional staff members.
- D. review process improvement opportunities and develop a plan to implement the changes. - ANSWER B. review performance indicators and service metrics along with organizational perception of the team's effectiveness.

The review of performance indicators, service metrics, and customer satisfaction validates the staff's concerns.

At which of the following care settings should a large, orthopedic healthcare organization anticipate the highest volume of postoperative patient services?

1. urgent care
  2. rehabilitation
  3. assisted-living
  4. home health
- A. 1 and 3 only
  - B. 1 and 4 only
  - C. 2 and 3 only
  - D. 2 and 4 only - ANSWER D. 2 and 4 only

A rehabilitation center's (#2) primary service is therapies designed to restore functioning to patients following orthopedic surgery which means a large number of

P.S. Free 2026 HIMSS CPHIMS dumps are available on Google Drive shared by TestKingFree: <https://drive.google.com/open?id=1znnxPVB5t3TsKIF56zeOb1TUSQdiEhDp>

Our PDF version, online test engine and windows software of the HIMSS Certified Professional in Healthcare Information and Management Systems study materials have no restrictions to your usage. You can freely download our PDF version and print it on papers. Also, you can share our CPHIMS study materials with other classmates. The online test engine of the study materials can run on all windows system, which means you can begin your practice without downloading the CPHIMS Study Materials as long as there have a computer. Also, our windows software support downloading for many times. What is more, you can install our CPHIMS study materials on many computers. All of them can be operated normally. The three versions of CPHIMS study materials are excellent. Just choose them as your good learning helpers.

The world today is in an era dominated by knowledge. Knowledge is the most precious asset of a person. If you feel exam is a headache, don't worry. CPHIMS test answers can help you change this. CPHIMS study material is in the form of questions and answers like the real exam that help you to master knowledge in the process of practicing and help you to get rid of those drowsy descriptions in the textbook. However, students often purchase materials from the Internet, who always encounters a problem that they have to waste several days of time on transportation, especially for those students who live in remote areas. But with CPHIMS Exam Materials, there is no way for you to waste time. The sooner you download and use CPHIMS study braindumps, the sooner you get the certificate.

## CPHIMS New Dumps Questions & CPHIMS Trustworthy Practice

We offer you free update for 365 days after purchasing CPHIMS study guide, so that you don't need to spend extra money on the update version, and latest version for CPHIMS exam materials will be sent to your email address automatically. In addition, CPHIMS exam dumps are compiled by professional experts who are quite familiar with the exam center, therefore if you choose us, you can get the latest information for the exam timely. CPHIMS Exam Materials are also high quality, we have a professional team to examine the answers on a continuous basis, and therefore, you can use them at ease.

### HIMSS Certified Professional in Healthcare Information and Management Systems Sample Questions (Q63-Q68):

#### NEW QUESTION # 63

The ability to examine data from various sources and provide information on trends, risks, and financial progress is called

- A. Enterprise Transformation Language (ETL).
- B. data warehousing.
- C. decision support.
- D. data harvesting.

**Answer: C**

Explanation:

The correct answer is decision support because it refers to the capability to analyze data from multiple sources and transform it into meaningful information that supports informed decision-making. In healthcare information and management systems, decision support tools aggregate clinical, operational, and financial data to identify trends, assess risk, monitor quality indicators, and evaluate financial performance. These systems help leadership and clinicians make evidence-based decisions by providing dashboards, predictive analytics, performance metrics, and alerts.

While data warehousing (Option D) involves collecting and storing large volumes of structured data from different source systems into a centralized repository, it primarily supports storage and organization rather than direct analysis and interpretation. ETL (Extract, Transform, Load) processes are technical mechanisms used to move and prepare data for storage in a warehouse but do not themselves provide analytical insight.

Data harvesting generally refers to collecting data, often from external sources, and does not inherently include analytical interpretation.

In healthcare environments, decision support systems (DSS) are essential for quality improvement, risk management, population health initiatives, regulatory reporting, and financial oversight. By synthesizing multi-source data into actionable intelligence, decision support fulfills the function described in the question.

#### NEW QUESTION # 64

A healthcare organization's Chief Information Officer (CIO) can ensure that computer systems adhere to regulatory standards by

- A. relying on end-user departments to inform the CIO of regulatory changes.
- B. requesting that the compliance officer review regulatory upgrades.
- C. modifying vendor-supplied software with standards-based program changes.
- D. auditing systems against industry compliance standards.

**Answer: D**

Explanation:

The most effective way for a CIO to ensure computer systems adhere to regulatory standards is auditing systems against industry compliance standards. Auditing provides a formal, repeatable mechanism to confirm that required controls are not only designed but also implemented and operating effectively. In healthcare IT, this includes assessing access controls, authentication practices, audit logging, data retention, encryption, backup/recovery, change management, and incident response-controls that map to regulatory obligations and accepted frameworks. Regular audits also produce documentation and evidence (policies, configurations, logs, test results) needed for governance and external scrutiny, and they reveal gaps early so corrective actions can be prioritized and tracked. Option A is weak governance because it depends on informal communication from departments rather than a structured compliance monitoring program. Option B helps, but delegating review to a compliance officer alone does not ensure technical controls are

actually configured and functioning across systems-CIO accountability requires verification. Option D is risky because modifying vendor-supplied software can violate support agreements, complicate validation, and introduce new defects; compliance is typically achieved through configuration, controls, and vendor-managed updates , not custom code changes. Therefore, systematic auditing is the strongest CIO-led method to ensure adherence.

#### NEW QUESTION # 65

Which of the following tools provides communication technology for remote medical services?

- **A. Telemedicine.**
- B. Telemonitoring.
- C. Patient portals.
- D. Wearable devices.

**Answer: A**

Explanation:

Telemedicine is the tool that directly provides communication technology for remote medical services . It enables real-time (synchronous) or asynchronous clinical interactions between healthcare providers and patients using telecommunications technologies such as video conferencing, secure messaging, and remote consultation platforms. Telemedicine supports virtual visits, remote diagnosis, follow-up consultations, behavioral health sessions, and specialty consults without requiring the patient to be physically present in a healthcare facility. It is specifically designed to deliver clinical care at a distance.

Patient portals primarily facilitate secure messaging, appointment scheduling, and access to health records; while they support communication, they are not themselves the comprehensive remote care delivery platform.

Wearable devices collect physiologic data (e.g., heart rate, activity levels), but they do not inherently provide clinical communication services. Telemonitoring focuses on remote monitoring of patient health data (e.g., blood pressure, glucose levels) and may support care management, but it does not necessarily include direct interactive communication between patient and provider.

Thus, the option that best represents communication technology specifically intended for remote medical services is Telemedicine .

#### NEW QUESTION # 66

Which is NOT a type of waste, according to Lean experts?

- **A. Planning.**
- B. Transportation.
- C. Waiting.
- D. Inventory.

**Answer: A**

Explanation:

In Lean management, "waste" (often called muda ) refers to activities that consume resources but do not add value from the customer's perspective-within healthcare, that "customer" is commonly the patient and the care team relying on timely, safe services. Classic Lean frameworks identify specific categories of waste, commonly remembered as TIMWOODS : Transportation, Inventory, Motion, Waiting, Overproduction, Overprocessing, Defects, and Skills (unused talent) . In that list, Waiting , Inventory , and Transportation are all explicitly recognized waste types because they create delays, tie up capital and space, and add risk without improving care. For example, waiting can increase length of stay and frustrate patients; excess inventory can lead to expired supplies; and unnecessary transportation can raise labor cost and increase the chance of loss or error.

Planning , however, is not categorized as a Lean waste type. In fact, effective planning-especially when aligned with standardized work, clear value-stream goals, and stakeholder communication-supports Lean by preventing rework, reducing variation, and improving flow. While "over-planning" could be viewed as overprocessing in some contexts, planning itself is not one of the defined Lean waste categories. Therefore, the correct choice for what is not a Lean waste type is Planning .

#### NEW QUESTION # 67

A statement which describes the desired future state is called a

- A. mission statement.
- **B. vision statement.**
- C. values statement.

- D. position statement.

**Answer: B**

Explanation:

A vision statement describes the desired future state of an organization-what the organization ultimately aims to become or achieve. Within healthcare information and management systems governance, the vision statement provides long-term strategic direction and establishes an aspirational picture of success. It answers the question, "Where do we want to be in the future?" and serves as a guiding framework for digital transformation, technology adoption, and enterprise strategy.

In contrast, a mission statement defines the organization's current purpose-what it does, whom it serves, and how it delivers value today. A values statement outlines the core principles and ethical standards that guide behavior and decision-making. A position statement typically communicates an organization's stance on a specific issue or policy matter and is not a forward-looking strategic description.

From a healthcare IT leadership perspective, a clearly articulated vision is essential for aligning clinical informatics initiatives, infrastructure investments, interoperability goals, and innovation strategies. It ensures that major programs-such as EHR optimization, analytics implementation, cybersecurity strengthening, and patient engagement platforms-are aligned toward a unified, future-oriented objective. Therefore, the correct answer is vision statement, as it specifically defines the organization's intended future state.

## NEW QUESTION # 68

.....

Of course, when we review a qualifying exam, we can't be closed-door. We should pay attention to the new policies and information related to the test CPHIMS certification. For the convenience of the users, the CPHIMS test materials will be updated on the homepage and timely update the information related to the qualification examination. Annual qualification examination, although content broadly may be the same, but as the policy of each year, the corresponding examination pattern grading standards and hot spots will be changed, as a result, the CPHIMS Test Prep can help users to spend the least time, you can know the test information directly what you care about on the learning platform that provided by us, let users save time and used their time in learning the new hot spot concerning about the knowledge content.
