

NCLEX-RN Reasonable Exam Price - Latest NCLEX-RN Exam Tips

NCLEX-RN Exam 2025: Latest 140 Practice Questions, Answers, and Study Tips for Success from Recent Exam

1. A nurse is preparing to administer insulin to a patient with Type 1 Diabetes Mellitus. Which action should the nurse take first?

- A) Check the patient's blood glucose level
- B) Administer insulin before checking blood sugar
- C) Offer a carbohydrate-rich snack before the injection
- D) Give the insulin in the deltoid muscle

✔ **Correct Answer: A) Check the patient's blood glucose level**

💡 **Rationale:** Always assess blood glucose before administering insulin to prevent hypoglycemia.

2. A nurse is teaching a pregnant client about the signs of preterm labor. Which symptom should the client report immediately?

- A) Mild backache after walking
- B) Occasional Braxton Hicks contractions
- C) Persistent lower abdominal cramping
- D) Increased fetal movement

✔ **Correct Answer: C) Persistent lower abdominal cramping**

💡 **Rationale:** Persistent lower abdominal cramping may indicate preterm labor and requires immediate evaluation.

3. A nurse is caring for a child with dehydration due to gastroenteritis. Which assessment finding indicates improvement?

- A) Sunken fontanels
- B) Decreased urine output
- C) Moist mucous membranes
- D) Increased heart rate

✔ **Correct Answer: C) Moist mucous membranes**

💡 **Rationale:** Moist mucous membranes suggest adequate hydration, while sunken fontanels, oliguria, and tachycardia indicate continued dehydration.

4. A client with cirrhosis is at risk for hepatic encephalopathy. Which lab value should the nurse monitor?

- A) Potassium
- B) Blood glucose
- C) Ammonia levels
- D) Calcium

✔ **Correct Answer: C) Ammonia levels**

If you have any questions for NCLEX-RN exam materials, you can consult us, and we will give you reply as quickly as we can.

NCLEX-RN, or National Council Licensure Examination for Registered Nurses, is a certification exam that is required for anyone who wants to become a registered nurse in the United States. NCLEX-RN exam is administered by the National Council of State Boards of Nursing, and it is designed to test the knowledge and skills that are necessary for safe and effective nursing practice. The NCLEX-RN is a computerized exam, and it can be taken at Pearson VUE testing centers throughout the country.

Passing the NCLEX-RN exam is a crucial step in obtaining licensure as a registered nurse in the United States. It is important to note that the exam is not designed to test a candidate's memorization skills but rather their ability to apply their knowledge and critical thinking skills to real-world nursing scenarios. As such, candidates must not only be well-versed in the material but must also be able to think critically and make sound decisions under pressure.

Preparing for the NCLEX-RN Exam is an essential part of becoming a registered nurse. Candidates are recommended to start preparing for the exam early in their nursing education to ensure they have the necessary knowledge and skills to pass the exam.

There are numerous resources available for candidates to prepare for the exam, including study materials, practice exams, and review courses. Candidates should also familiarize themselves with the format and content of the exam to reduce test anxiety and increase their chances of success.

NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q287-Q292):

NEW QUESTION # 287

A 1000-mL dose of D5W 12 normal saline is to be infused in 8 hours. The drop factor for the tubing is 60 gtt/min. How many drops per minute should the nurse administer?

- A. 100 gtt/min
- B. 125 gtt/min
- C. 150 gtt/min
- D. 75 gtt/min

Answer: B

Explanation:

Explanation

(A) This answer is a miscalculation. (B) This answer is a miscalculation. (C) 125 gtt/min. (D) This answer is a miscalculation.

NEW QUESTION # 288

When a client with pancreatitis is discharged, the nurse needs to teach him how to prevent another occurrence of acute pancreatitis. Which of the following statements would indicate he has an understanding of his disease?

- A. "I will look into attending Alcoholics Anonymous meetings."
- B. "I will limit my alcohol to one cocktail per day."
- C. "I will not eat any raw or uncooked vegetables."
- D. "I will report any changes in bowel movements to my doctor."

Answer: A

Explanation:

(A)

Raw or uncooked vegetables are all right to eat postdischarge. (B) This client must avoid any alcohol intake. (C) The client displays awareness of the need to avoid alcohol.

(D)

This action would be pertinent only if fatty stools associated with chronic hepatitis were the problem.

NEW QUESTION # 289

The client tells the nurse, "I have pain in my left shoulder."

This is considered:

- A. Subjective information
- B. Objective information
- C. Evaluation process

- D. Complaining

Answer: A

Explanation:

Explanation

(A) Evaluation process follows a nursing intervention. (B) Objective information can be measured. (C) Subjective information is provided by a person. (D) Client is reporting a symptom that needs to be assessed.

NEW QUESTION # 290

In working with a manipulative client, which of the following nursing interventions would be most appropriate?

- A. Redirecting the client
- B. Assigning the client to different staff persons each day
- C. Providing a consistent set of guidelines and rules
- D. Bargaining with the client as a strategy to control the behavior

Answer: C

Explanation:

(A) This answer is incorrect. Bargaining is a manipulative act, which the nurse could expect from the client. (B) This answer is incorrect. Confrontation is an effective nursing strategy with manipulative behavior. Redirection is appropriate for the client who is out of touch with reality. (C) This answer is correct. Manipulative clients must abide by consistent rules. (D) This answer is incorrect. Manipulation is kept at a minimum if the same staff person is assigned to the client. Often the client will attempt to play staff persons against each other.

NEW QUESTION # 291

A female client who has chronic obstructive pulmonary disease (COPD) has presented in the emergency department with cough productive of yellow sputum and increasing shortness of breath. On room air, her blood gases are as follows: pH 7.30 mmHg, PCO₂ 60 mmHg, PO₂ 55 mmHg, HCO₃ 32 mEq/L. These arterial blood gases reflect:

- A. Uncompensated metabolic acidosis
- B. Compensated respiratory acidosis
- C. Normal blood gases
- D. Uncompensated respiratory acidosis

Answer: D

Explanation:

Explanation

(A) In compensated respiratory acidosis, the pH level is normal, the PCO₂ level is elevated, and the HCO₃ level is elevated. The client's primary alteration is an inability to remove CO₂ from the lungs, so over time, the kidneys increase reabsorption of HCO₃ to buffer the CO₂. (B) Normal ranges for arterial blood gases for adults and children are as follows: pH 7.35-7.45, PO₂ 80-100 mmHg, PCO₂ 35-45 mmHg, HCO₃ 21-28 mEq/L. (C) In uncompensated metabolic acidosis the pH level is decreased, the PCO₂ level is normal, and the HCO₃ level is decreased. The client's primary alteration is an inability to remove excess acid via the kidneys. The lungs are unable to clear the increased acid. (D) In uncompensated respiratory acidosis, the pH level is decreased, the PCO₂ level is increased, and the HCO₃ level is normal. In a person with long-standing COPD, the HCO₃ level will rise gradually over time to compensate for the gradually increasing PCO₂, and the person's pH level will be normal. When a person with COPD becomes acutely ill, the kidneys do not have time to increase the reabsorption of HCO₃, so the person's pH level will reflect acidosis even though the HCO₃ is elevated.

NEW QUESTION # 292
