Which option is supported by Nutanix for Data-at-Rest encryption?

- A. Data-only Encryption
- B. Cluster-only Encryption
- **C. Software-only Encryption**
- D. Storage Pool-only Encryption

Answer: C

Explanation:

The correct answer is D. Software-only Encryption.

Nutanix supports Data-at-Rest Encryption (DARE) through both hardware-based and software-based methods. Among the supported solutions, software-only encryption is a widely used and officially supported method, especially when Self-Encrypting Drives (SEDs) are not in use.

Key facts about Nutanix DARE:

* Enables encryption of data written to physical media.

* Works at the CVM and controller layer, ensuring all I/O is encrypted before being persisted.

* Software-based encryption can be enabled via Prism Central or command-line using Native Key Management (NKM) or external KMIP-compliant key managers.

* Hardware encryption (SED) is optional and not required for DARE.

Clarifications:

* A. Storage Pool-only Encryption: Not valid; encryption applies at the cluster level, not only to storage pools.

* B. Data-only Encryption: Ambiguous and not a Nutanix-supported term.

* C. Cluster-only Encryption: Misleading: encryption is applied to data at rest, not to the "cluster" object.

* Excerpt: "Nutanix supports software-only data-at-rest encryption using Native Key Management or external KMIP key managers, without requiring self-encrypting drives."
