**NEW QUESTION # 22**

Refer to the exhibit.

Refer to the exhibit. What must be configured in the service graph to redirect HTTP traffic between the EPG client and EPG server to go through the Cisco ASA firewall?

- A. precise filter to allow only HTTP traffic
- B. contract filter to allow ARP and HTTP.
- C. permit-all contract filter
- D. contract with no filter

**Answer: A**

Explanation:
To redirect HTTP traffic between the EPG client and EPG server through the Cisco ASA firewall using a service graph in Cisco ACI, a precise filter must be configured to allow only HTTP traffic. This filter will specify the protocol (HTTP) and the Layer 4 port (typically port 80 for HTTP) to ensure that only HTTP traffic is redirected to the firewall for inspection or processing. The service graph can then be associated with the relevant EPGs to enforce the redirection1.
