Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which productivity advantage does Anypoint Platform have to both implement and manage an API?

- A. Automatic API semantic versioning
- B. Automatic API specification generation
- C. Automatic API governance
- D. Automatic API proxy generation

Answer: D

Explanation:

Anypoint Platform, MuleSoft's unified platform for API design and integration, offers several productivity advantages for both implementing and managing APIs. Among these features, automatic API proxy generation is particularly beneficial. Here's a step-by-step explanation:

- * API Implementation:

- * Design Center: In the Design Center, users can create API specifications using RAML or OAS.

This environment provides tools to design and document APIs effectively.

- * Exchange: After defining the API, it can be published to Anypoint Exchange where it can be shared and discovered by others within the organization.

- * Automatic API Proxy Generation:

- * When an API is published to Exchange, Anypoint Platform allows for the automatic creation of an API proxy. An API proxy acts as a facade for your backend API, providing a layer of abstraction and security.

- * Advantages:

- * Security: Protects backend services by exposing only necessary endpoints and handling authentication, authorization, and rate limiting.

- * Traffic Management: Helps in managing traffic through throttling and caching.

- * Monitoring: Facilitates monitoring and logging to track API usage and performance.

- * This automation saves time and reduces the complexity of manual proxy setup, allowing developers to focus on core business logic.

- * API Management:

- * API Manager: Provides a dashboard to manage API policies, versions, and SLA tiers. Users can apply security policies, monitor traffic, and analyze API usage.

- * Monitoring: Integrated with Anypoint Monitoring, users get insights into API performance and health, enabling proactive management.

NEW QUESTION # 24

Which Exchange asset type represents a complete API specification in RAML or OAS format?

- A. Connectors
- **B. REST APIs**
- C. SOAP APIs
- D. API Spec Fragments

Answer: B

Explanation:

In Anypoint Exchange, a REST API asset represents a complete API specification in RAML (RESTful API Modeling Language) or OAS (OpenAPI Specification) format. Here's a detailed explanation:

- * REST APIs:

- * Definition: REST APIs are application programming interfaces that adhere to the principles of REST, allowing interaction with RESTful web services.

- * Specifications: Typically defined using RAML or OAS to describe the API's endpoints, methods, request/response structures, and security protocols.

- * Asset Types in Anypoint Exchange:

- * REST APIs: Represent the full API specification, including all necessary details for developers to understand and use the API.

- * SOAP APIs: Define APIs following the SOAP protocol, often using WSDL.

- * Connectors: Provide pre-built connectivity to various systems and services.

- * API Spec Fragments: Reusable pieces of an API specification, such as data types or security schemes, that can be included in full API specifications.

- * Usage:

- * Discoverability: Developers can easily discover, review, and reuse these API specifications in their projects.

- * Documentation: Provides comprehensive documentation generated from the API specification, ensuring consistency and clarity.

NEW QUESTION # 25

An organization is choosing between API-led connectivity and other integration approaches. According to MuleSoft, which business benefit is associated with an API-led connectivity approach using Anypoint Platform?

- A. Greater project predictability through tight coupling of systems
- B. Higher outcome repeatability through centralized development
- C. Improved security through adoption of monolithic architectures
- **D. Increased developer productivity through self-service of API assets**

Answer: D

Explanation:

API-led connectivity is an approach that emphasizes the reuse of APIs to enhance agility and productivity.

Here's a detailed explanation of the associated business benefits:

* Self-Service of API Assets:

* Definition: API-led connectivity enables developers to discover, access, and use APIs through a centralized platform like Anypoint Exchange, promoting self-service.

* Productivity: Developers can quickly find and integrate existing APIs, reducing the time and effort required to build new functionalities from scratch.

* Business Benefits:

* Reusability: Encourages the reuse of APIs across projects, leading to faster development cycles and reduced duplication of efforts.

* Agility: Enhances the ability to respond to changing business needs by providing a flexible and modular integration framework.

* Scalability: Facilitates the scaling of integration solutions as business requirements grow.

NEW QUESTION # 26

According to MuleSoft, a synchronous invocation of a RESTful API using HTTP to get an individual customer record from a single system is an example of which system integration interaction pattern?

- A. Batch
- **B. Request-Reply**
- C. Multicast
- D. One-way

Answer: B

Explanation:

In system integration, different interaction patterns are used depending on the communication requirements between systems. For a synchronous invocation of a RESTful API using HTTP to get an individual customer record from a single system, the Request-Reply pattern is used. Here's a detailed explanation:

* Request-Reply Pattern:

* Definition: This pattern involves a client sending a request to a server and waiting for a reply.

The communication is synchronous, meaning the client waits for the server to process the request and send back the response.

* Typical Use Case: It is used when immediate feedback is required from the server, such as retrieving a specific customer record.

* RESTful API and HTTP:

* Synchronous Communication: HTTP is inherently synchronous, making it suitable for Request-Reply interactions where the client expects an immediate response.

* Data Retrieval: Commonly used for GET requests in RESTful APIs to retrieve data from a server.

* Example:

* Scenario: A client application requests customer details by making a GET request to a RESTful API endpoint. The server processes the request and returns the customer record.

NEW QUESTION # 27

What are two reasons why a typical MuleSoft customer favors a MuleSoft-hosted Anypoint Platform runtime plane over a customer-

hosted runtime for its Mule application deployments? (Choose two.)

- **A. Reduced time-to-market for the first application**
- B. increased application isolation
- C. Reduced application latency
- **D. Reduced IT operations effort**
- E. Increased application throughput

Answer: A,D

Explanation:

Choosing a MuleSoft-hosted Anypoint Platform runtime plane offers several advantages, particularly in terms of deployment efficiency and operational management. Here's a detailed explanation of the selected reasons:

* Reduced Time-to-Market for the First Application:

* Pre-Configured Environment: MuleSoft-hosted Anypoint Platform provides a ready-to-use environment, which accelerates the deployment process.

* Ease of Use: Developers can quickly set up and deploy applications without the need for extensive infrastructure setup and configuration.

* Reduced IT Operations Effort:

* Managed Services: MuleSoft handles the infrastructure management, including updates, scaling, and maintenance, reducing the operational burden on the IT team.

* Focus on Development: IT teams can focus on developing and optimizing applications rather than managing runtime environments.
