

# Testking 300-425 Learning Materials | Valid Test 300-425 Format

BONUS!!! Download part of Pass4Test 300-425 dumps for free: <https://drive.google.com/open?id=1rDEDapLLoGPr9ghUaXQPpx88pjdiv0KMU>

We always strictly claim for our 300-425 study materials must be the latest version, to keep our study materials up to date, we constantly review and revise them to be at par with the latest Cisco syllabus for 300-425 exam. This feature has been enjoyed by over 80,000 takes whose choose our study materials. The one who choose our study materials that consider our website as the top preparation material seller for 300-425 Study Materials, and inevitable to carry all candidates the finest knowledge on exam syllabus contents. Not only that, we will provide you a free update service within one year from the date of purchase, in order to keep up the changes in the exam so that every candidates who purchase our 300-425 study materials can pass the exam one time.

## WLAN High Availability

The questions from this section cover 20% of the entire content and are dedicated to evaluating the following abilities of the candidates:

- Design high availability for APs, including fail-back (primary, secondary, and assigning tertiary) and AP prioritization.
- Design high availability for various controllers, including network availability through LAG, stateful switchover, as well as anchor controller priority & redundancy;

## Cisco 300-425 Exam | Testking 300-425 Learning Materials - Always Available for your Demands

We provide varied functions to help the learners learn our 300-425 study materials and prepare for the exam. The self-learning and self-evaluation functions of our 300-425 exam questions help the learners check their learning results and the statistics and report functions help the learners find their weak links and improve them promptly. And you will be more confident as you know the inform of the 300-425 Exam and the questions and answers.

## Cisco Designing Cisco Enterprise Wireless Networks Sample Questions (Q78-Q83):

### NEW QUESTION # 78

An engineer has designed an anchor redundancy for guest clients connecting to SSID with auto-anchor configured. After adding a second Anchor WLC under the SSID mobility anchor list, clients are load-balanced between existing and new anchors instead of having one anchor as active and the other one as standby. Which feature should be included in the design that will be configured on the WLC running

8.1 or above to ensure anchor redundancy?

- A. AP groups
- B. Auto-Anchor Foreign Mapping
- C. Guest Anchor Priority
- D. 802.11r

**Answer: C**

Explanation:

When designing anchor redundancy for guest clients with auto-anchor configured on a WLC running version 8.1 or above, setting up Guest Anchor Priority ensures that one anchor is treated as active while another acts as standby rather than load-balancing clients between anchors which is not desired in this case. Reference = (CCNP Enterprise Wireless Design ENWLSD 300-425 and Implementation ENWLSI 300-430 Official Cert Guide Premium Edition and Practice)

### NEW QUESTION # 79

An engineer is designing an outdoor mesh network to cover several sports fields. The core of the network is located in a building at the entrance of a sports complex. Which type of antenna should be used with the RAP for backhaul connectivity?

- A. 2.4 GHz, 14-dBi omnidirectional antenna
- B. 2.4 GHz, 8-dBi patch antenna
- C. 5 GHz, 8-dBi omnidirectional antenna
- D. 5 GHz, 14-dBi patch antenna

**Answer: C**

Explanation:

Explanation:

### NEW QUESTION # 80

A network engineer is working on a predictive WLAN design, the new wireless network must support access to Internet, email, voice, and the inventory database, to successfully support these services, which configuration must the engineer use for the signal strength levels and SNR on the planning tool?

- A. signal strength of -67 dBm, 20-dB SNR, and maximum 1 percent packet loss.
- B. signal strength of -70 dBm, 30-dB SNR, and maximum 10 percent packet loss.
- C. signal strength of -67 dBm, 25-dB SNR, and maximum 1 percent packet loss.
- D. signal strength of -67 dBm, 20-dB SNR, and maximum 5 percent, packet loss.

**Answer: C**

Explanation:

For a WLAN design that supports services like internet, email, voice, and database access, a signal strength of -67 dBm is considered good for voice and streaming services. A 25-dB SNR (Signal-to-Noise Ratio) is also desirable for high-quality voice and video applications, and a maximum of 1 percent packet loss is acceptable to ensure reliable connectivity and service quality. <https://www.cisco.com/c/en/us/support/docs/wireless/5500-series-wireless-controllers/116057site-survey-guidelines-wlan-00.html>

### NEW QUESTION # 81

A wireless engineer is designing a wireless network to support real-time applications over wireless. Which IEEE protocol must the engineer enable on the WLC so that the number of packets that are exchanged between an access point and client are reduced and fast roaming occurs?

- A. 802.11k
- B. 802.11i
- C. 802.11w
- **D. 802.11r**

**Answer: D**

Explanation:

□

## NEW QUESTION # 82

What causes the most signal attenuation, based on the wireless design tools?

- A. office window
- **B. metal door**
- C. glass wall
- D. cinder block wall

**Answer: B**

Explanation:

Section: Wireless Site Survey

## NEW QUESTION # 83

.....

We also update frequently to guarantee that the client can get more learning 300-425 exam resources and follow the trend of the times. So if you use our 300-425 study materials you will pass the test with high success probability. And our 300-425 learning guide is high-effective. If you study with our 300-425 practice engine for 20 to 30 hours, then you can pass the exam with confidence and achieve the certification as well.
