EMC Dell Technologies PowerMax Operate Sample Questions (Q66-Q71):

NEW QUESTION # 66
What input is required when registering an ESXi server in Unisphere for PowerMax?

- A. Unisphere credentials and hostname
- B. ESXi server credentials and Unisphere credentials
- C. IP address and hostname
   C IP address and ESXi server credentials

Answer: B

Explanation:
Step by Step Comprehensive Detailed Explanation:
To register an ESXi server in Unisphere for PowerMax, you need to provide the following information:
* IP Address:The IP address of the ESXi server that you want to manage. This allows Unisphere to communicate with the ESXi host.
* ESXi Server Credentials:The username and password of an account with sufficient privileges to access and manage the ESXi server. This ensures that Unisphere has the necessary permissions to perform storage-related operations on the ESXi host.
Why other options are incorrect:
* A. Unisphere credentials and hostname:Unisphere credentials are used to log in to Unisphere itself, not to register an ESXi server.
* B. IP address and hostname:While the hostname might be helpful, the ESXi server credentials are essential for authentication and authorization.
* D. ESXi server credentials and Unisphere credentials:Unisphere credentials are not required for registering an ESXi server.
References and documents of Dell's public documentation for PowerMax Operate v.2:
* Dell PowerMax and VMware vSphere Configuration Guide:This guide provides detailed instructions on how to register and manage ESXi servers in Unisphere for PowerMax. You can find this document on the Dell Support website by searching for "PowerMax and VMware vSphere Configuration Guide."
* Dell Unisphere for PowerMax 10.0.0 Online Help:The online help for Unisphere might also provide guidance on registering ESXi servers.

NEW QUESTION # 67
An administrator is using Unisphere for PowerMax Workload Planner to assess the performance and compliance of a PowerMax Storage Group (SG).
How does the Planner calculate if the Storage Group workload is fully compliant?

- A. Weighted SG average response time for the past 8 hours and past one week
- B. Weighted SG average response time for the past 4 hours and past one week
- C. Weighted SG average response times for the past 30 minutes
- D. Weighted SG average response time for the past 4 hours and past two weeks

Answer: D

NEW QUESTION # 68
What is the largest TDEV PowerMaxOS 5978 can create?

- A. 64 TB
- B. 16 TB
- C. 32 TB
- D. 128 TB

Answer: A

NEW QUESTION # 69
What are the two configuration rules that apply to SRDF groups and connections during Non-Disruptive Migrations'?

- A. Two DM RDF groups are created per SG migration session

- B. DM RDF groups are configured with a minimum of one path
- C. The source and target arrays are at most one hop away from the control host
- D. A single array cannot have multiple DM RDF groups
- E. RF and RE ports are supported, with RF ports being selected if both types are available

Answer: B,C

Explanation:
Step by Step Comprehensive Detailed Explanation:
Non-Disruptive Migration (NDM) is a feature in PowerMax that allows you to migrate data between storage arrays without any downtime or disruption to host applications. During NDM, SRDF (Symmetrix Remote Data Facility) is used to replicate data between the source and target arrays. Here are the configuration rules that apply to SRDF groups and connections during NDM:
* A. The source and target arrays are at most one hop away from the control host:The control host, which manages the NDM process, must have direct connectivity to both the source and target arrays.
This ensures efficient communication and control during the migration.
* E. DM RDF groups are configured with a minimum of one path:SRDF groups used for NDM (DM RDF groups) must have at least one active path between the source and target arrays. This ensures that data can be replicated continuously during the migration.
Why other options are incorrect:
* B. Two DM RDF groups are created per SG migration session:This is not a strict requirement. The number of DM RDF groups may vary depending on the configuration and the specific NDM operation.
* C. RF and RE ports are supported, with RF ports being selected if both types are available:While RF and RE ports are supported for SRDF, there's no specific preference for RF ports during NDM. The choice of ports depends on the overall network configuration and availability.
* D. A single array cannot have multiple DM RDF groups:An array can have multiple DM RDF groups if needed for different NDM operations or configurations.
References and documents of Dell's public documentation for PowerMax Operate v.2:
* Dell PowerMax Family: Essentials and Best Practices Guide:This guide provides an overview of NDM and its requirements, including information about SRDF configuration.
* Dell Solutions Enabler 10.0.0 CLI User Guide:This guide provides detailed information about SRDF commands and configuration options, which are relevant for NDM operations.

NEW QUESTION # 70
A Storage Administrator runs the command:
syradm list -environment -offline
What migration environments are listed?

- A. The environments where the application has been taken offline to perform the cutover.
- B. Only the environments controlled by the host from where the list command is run.
- C. The environments controlled by and those from the systems reachable by the host performing the command.

Answer: C

Explanation:
Step by Step Comprehensive Detailed Explanation:
The syradm list -environment -offline command in Solutions Enabler is used to display information about migration environments that are currently offline.
Here's what it shows:
* Controlled Environments:It lists the migration environments that are directly controlled by the host where the command is executed.
These are the environments where the host acts as the primary control point for the migration.
* Reachable Environments:It also lists environments that are reachable from the host executing the command. This includes environments controlled by other hosts that are connected and accessible within the SAN fabric.
This broader scope allows administrators to get a comprehensive view of offline migration environments across their managed systems.
Why other options are incorrect:
* A. The environments where the application has been taken offline to perform the cutover:While offline environments might be associated with cutovers, the command shows all offline environments regardless of their specific stage in the migration process.
* B. Only the environments controlled by the host from where the list command is run:It also includes reachable environments, not just those directly controlled by the host.
References and documents of Dell's public documentation for PowerMax Operate v.2:

* Dell Solutions Enabler 10.0.0 CLI User Guide:This guide provides detailed information about the syradm command and its various options, including the list -environment -offline command for displaying offline migration environments. You can find this document on the Dell Support website by searching for "Solutions Enabler CLI User Guide."
