無料Microsoft AZ-500: Microsoft Azure Security Technologies日本語pdf問題 - 信頼的なFast2test AZ-500日本語版テキスト内容

過去10年間で、当社Fast2testはAZ-500学習教材の品質の改善を止めませんでした。長い間、AZ-500試験問題を完成させるために多くのお金を投資してきました。同時に、AZ-500テストトレントを完成させるために、最先端の技術と研究者を導入しました。現在、当社の全体的な強さは以前よりもはるかに強くなっています。私たちは市場のリーダーであり、最先端の技術を習得しています。高品質のAZ-500トレーニングガイドを使用すると、AZ-500試験に確実に合格します。

Microsoft Azure Security Technologies 認定 AZ-500 試験問題 (Q465-Q470):

質問 # 465

You have an Azure Active Directory (Azure AD) tenant named contoso.com that contains the users shown in the following table.

Azure AD Privileged Identity Management (PIM) is enabled for the tenant.

In PIM, the Password Administrator role has the following settings:

Maximum activation duration (hours): 2

Send email notifying admins of activation: Disable

Require incident/request ticket number during activation: Disable

Require Azure Multi-Factor Authentication for activation: Enable

Require approval to activate this role: Enable

Selected approver: Group1

You assign users the Password Administrator role as shown in the following table.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

正解:

解説:

Explanation:

YES (Already active)

YES (The user will be prompted for MFA regardless the MFA Status of the user) NO (Even the user is included in the group, a user can't approve itself)

<https://docs.microsoft.com/es-es/azure/active-directory/privileged-identity-management/pim-deployment-plan> (Require approval section)

質問 # 466

You have a hybrid configuration of Azure Active Directory (Azure AD).

All users have computers that run Windows 10 and are hybrid Azure AD joined.

You have an Azure SQL database that is configured to support Azure AD authentication.

Database developers must connect to the SQL database by using Microsoft SQL Server Management Studio (SSMS) and authenticate by using their on-premises Active Directory account.

You need to tell the developers which authentication method to use to connect to the SQL database from SSMS. The solution must minimize authentication prompts.

Which authentication method should you instruct the developers to use?

- A. Active Directory - Integrated
- B. Active Directory - Universal with MFA support
- C. Active Directory - Password
- D. SQL Login

正解: A

解説:

Azure AD can be the initial Azure AD managed domain. Azure AD can also be an on-premises Active Directory Domain Services that is federated with the Azure AD.

Using an Azure AD identity to connect using SSMS or SSDT

The following procedures show you how to connect to a SQL database with an Azure AD identity using SQL Server Management Studio or SQL Server Database Tools.

Active Directory integrated authentication

Use this method if you are logged in to Windows using your Azure Active Directory credentials from a federated domain.

1. Start Management Studio or Data Tools and in the Connect to Server (or Connect to Database Engine) dialog box, in the Authentication box, select Active Directory - Integrated. No password is needed or can be entered because your existing

credentials will be presented for the connection.

2. Select the Options button, and on the Connection Properties page, in the Connect to database box, type the name of the user database you want to connect to. (The AD domain name or tenant ID" option is only supported for Universal with MFA connection options, otherwise it is greyed out.) References:

質問 # 467

You have Azure Resource Manager templates that you use to deploy Azure virtual machines. You need to disable unused Windows features automatically as instances of the virtual machines are provisioned.

What should you use?

- A. device configuration policies in Microsoft Intune
- B. Azure Logic Apps
- C. an Azure Desired State Configuration (DSC) virtual machine extension
- D. security policies in Azure Security Center

正解: C

解説:

You can use Azure Automation State Configuration to manage Azure VMs (both Classic and Resource Manager), on-premises VMs, Linux machines, AWS VMs, and on-premises physical machines.

Note: Azure Automation State Configuration provides a DSC pull server similar to the Windows Feature DSC-Service so that target nodes automatically receive configurations, conform to the desired state, and report back on their compliance. The built-in pull server in Azure Automation eliminates the need to set up and maintain your own pull server. Azure Automation can target virtual or physical Windows or Linux machines, in the cloud or on-premises.

質問 # 468

You need to configure SQLDB1 to meet the data and application requirements.

Which three actions should you recommend be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

正解:

解説:

Explanation:

From the Azure portal, create an Azure AD administrator for LitwareSQLServer1. Connect to SQLDB1 by using SSMS. In SQLDB1, create contained database users.

質問 # 469

You plan to configure Azure Disk Encryption for VM4. Which key vault can you use to store the encryption key?

- A. KeyVault2
- B. KeyVault3
- C. KeyVault1

正解: C

解説:

Explanation:

The key vault needs to be in the same subscription and same region as the VM.

VM4 is in West US. KeyVault1 is the only key vault in the same region as the VM.
