The Open Group TOGAF Business Architecture Foundation Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

Which of the following best describes a benefit of business models?

- A. They can be used to calculate detailed cost estimates.
- B. They provide a different viewpoint to cross-check assumptions.
- C. They highlight what the business does without the need to explain why.
- D. They can be used to resolve conflicts amongst different stakeholders.

Answer: B

Explanation:

Business models are essential tools within TOGAF for providing different perspectives on the business operations, strategies, and value propositions. Here's a detailed explanation:

* Purpose of Business Models:

* Business models are designed to represent various aspects of the business, such as value creation, delivery, and capture mechanisms. They provide a structured way to analyze and understand the business.

* Different Viewpoint:

* Cross-Check Assumptions: Business models offer a different viewpoint that helps in validating and cross-checking assumptions made about the business. By presenting a visual and structured representation of the business, these models enable stakeholders to identify gaps, inconsistencies, and areas that need further analysis.

* Holistic Understanding: They help in gaining a holistic understanding of how different components of the business interact, which is crucial for ensuring that the enterprise architecture aligns with the business strategy and goals.

* TOGAF References:

* Phase A: Architecture Vision: During this phase, business models are used to articulate the vision and scope of the architecture effort. They help in ensuring that all assumptions are validated and that the architecture aligns with business objectives.

* Phase B: Business Architecture: Business models are also utilized in this phase to analyze business capabilities, processes, and value streams. They provide a different viewpoint that aids in identifying areas for improvement and ensuring alignment with the strategic intent.

In summary, business models provide a different viewpoint that helps cross-check assumptions, ensuring that the enterprise architecture is aligned with the business strategy and objectives.

NEW QUESTION # 40

Which of the following best describes this diagram?

- **A. Business Capability Map**
- B. Business Relationships diagram
- C. Business Capabilities Layer diagram
- D. Business Capability/Value Stream Mapping

Answer: A

Explanation:

The diagram presented is best described as a Business Capability Map. Here's a detailed explanation:

* Business Capability Map:

* Definition: A Business Capability Map represents the various capabilities an organization requires to deliver its products and services and achieve its strategic objectives. It typically categorizes capabilities into different levels or tiers, such as strategic, core, and supporting capabilities.

* Diagram Analysis:

* Layers and Groupings: The diagram shows capabilities grouped into three categories: Strategic, Core, and Supporting. Each group lists specific business capabilities necessary for the organization's functioning.

* Color Coding: The use of different colors (green, red, yellow, purple) may indicate various aspects such as priority, status, or different business units. However, the primary purpose is to visually represent and categorize capabilities.

* TOGAF References:

* Phase B: Business Architecture: In this phase, creating a Business Capability Map is a crucial activity. It helps in understanding the business functions and aligning them with strategic goals.

* Capability-Based Planning: TOGAF promotes capability-based planning, which involves identifying, mapping, and analyzing business capabilities to ensure they support the overall strategy and objectives.

* Purpose and Benefits:

* Strategic Alignment: The Business Capability Map helps in aligning business capabilities with the strategic objectives of the organization. It provides a clear view of what the organization needs to do to achieve its goals.

* Gap Analysis: It is useful for conducting gap analysis by comparing current capabilities with the desired state, helping to identify areas for improvement.

* Resource Allocation: By understanding the different capabilities, organizations can allocate resources more effectively to areas that need development or enhancement.

In summary, the diagram is best described as a Business Capability Map because it visually represents and categorizes the various capabilities needed by the organization into strategic, core, and supporting layers, aligning them with the business strategy and objectives.

NEW QUESTION # 41

Consider the following example using the Business Model Canvas:

□ What are the segments labeled A, D and I?

- A. Customer Relationships, Value Propositions, Market Segments.
- B. Customer Segments, Value Add Services, Profit Channels.
- **C. Key Partners, Customer Relationships, Revenue Streams.**
- D. Key Resources, Revenue Streams, Cost Structure

Answer: C

Explanation:

The segments labeled A, D and I in the Business Model Canvas are Key Partners, Customer Relationships, and Revenue Streams respectively¹. The Business Model Canvas is a tool that can be used to describe how an organization creates, delivers, and captures value for its stakeholders¹. The Business Model Canvas consists of nine segments that cover four main areas: customers (segments B,C,D), offer (segment E), infrastructure (segments A,F,G), and financial viability (segments H,I)¹. The segments are defined as follows:

* Key Partners (segment A): The network of suppliers and partners that make the business model work¹. Key partners can provide resources, activities, or support that enable the organization to offer its value proposition¹.

* Customer Relationships (segment D): The type of relationship that the organization establishes with its customer segments¹. Customer relationships can be driven by customer acquisition, retention, or loyalty objectives¹. Customer relationships can also influence the customer experience and satisfaction¹.

* Revenue Streams (segment I): The sources of income that the organization generates from each customer segment¹. Revenue streams can be derived from different pricing mechanisms, such as asset sale, subscription, fee, commission, or advertising¹.

Revenue streams can also reflect the value that customers are willing to pay for the organization's offer¹.

NEW QUESTION # 42

Which of the following best describes a TOGAF business scenario?

- **A. A technique to elaborate an architecture effort.**
- B. A business case.
- C. A use-case providing detailed descriptions.
- D. A method to develop a business model.

Answer: A

Explanation:

A TOGAF business scenario is a technique that can be used to fully understand the requirements of information technology and align it with business needs¹. It is not a business case, which is a document that provides justification for a proposed project or initiative⁶. It is not a method to develop a business model, which is a description of how an organization creates, delivers, and captures value for its stakeholders⁷. It is not a use-case, which is a description of how a system interacts with external actors to achieve a specific goal.

A TOGAF business scenario is a technique that helps to derive architecture requirements by describing a business process, application, or set of activities. It includes detailing the actors, roles, goals, business policies, business processes, and the environment in which the scenario takes place. Business scenarios are used within TOGAF to ensure that the architecture has a clear link to the business requirements.

NEW QUESTION # 43

In business capability mapping, when you have documented all of the business capabilities, what should you do next?

- A. Map the business capabilities to stakeholder concerns.
- B. Draw up a business value assessment for each of the business capabilities.
- **C. Organize the business capabilities in a logical manner.**
- D. Identify the human and computer actors associated with each business capability.

Answer: C

Explanation:

According to the TOGAF Series Guide: Business Capabilities, after documenting all of the business capabilities, the next step is to organize them in a logical manner¹. This can be done by using techniques such as layering, sorting, mapping, and leveling¹. These techniques can help to classify, group, and align capabilities into categories for a deeper understanding of how they support the business goals and objectives¹. Organizing the business capabilities can also help to identify dependencies, gaps, overlaps, or redundancies among them¹.

NEW QUESTION # 44

.....

You can easily assess yourself with the help of our OGBA-101 practice software, as it records all your previous results for future use.
