- C. port1, port1-vlan10, and port1-vlan1 are in different broadcast domains
- D. port2, port2-vlan10, and port2-vlan1 are part of the software switch interface.

Answer: C

NEW QUESTION # 66

What are two critical tasks the OT network auditors must perform during OT network risk assessment and management? (Choose two.)

- A. Planning a threat hunting strategy
- B. Creating disaster recovery plans to switch operations to a backup plant
- C. Evaluating what can go wrong before it happens
- D. Implementing strategies to automatically bring PLCs offline

Answer: A,C

Explanation:

Planning a threat hunting strategy is essential for proactively searching for threats and vulnerabilities in the OT environment before they manifest into attacks.

Evaluating what can go wrong before it happens is a core part of risk assessment, involving the identification and analysis of potential risks and their impacts on OT systems.

Implementing strategies to automatically bring PLCs offline is generally not a responsible or safe approach in OT environments because it could disrupt critical industrial processes.

Creating disaster recovery plans is important for overall business continuity but is not primarily a task of auditors during risk assessment-it is more of a broader business continuity or incident response responsibility.

NEW QUESTION # 67

How can you achieve remote access and internet availability in an OT network?

- A. Create a back-end backup network as a redundancy measure.
- B. Create more access policies to prevent unauthorized access.
- C. Add additional internal firewalls to access OT devices.
- **D. Implement SD-WAN to manage traffic on each ISP link.**

Answer: D

NEW QUESTION # 68

Refer to the exhibit, which shows a non-protected OT environment.

An administrator needs to implement proper protection on the OT network.

Which three steps should an administrator take to protect the OT network? (Choose three.)

- **A. Configure firewall policies with industrial protocol sensors**
- **B. Deploy a FortiGate device within each ICS network.**
- C. Deploy an edge FortiGate between the internet and an OT network as a one-arm sniffer.
- D. Configure firewall policies with web filter to protect the different ICS networks.
- **E. Use segmentation**

Answer: A,B,E
