If you have doubt in your test, let us help you pass exam for sure.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q165-Q170):

NEW QUESTION # 165

Universal Containers allows customers to log into a Salesforce Community and update their orders via a custom Visualforce page. Universal Containers' sales representatives can edit the orders on the same Visualforce page.

What should a developer use in an Apex test class to test that record sharing is enforced on the Visualforce page?

- A. use `System.profilesIn()` to test as a sales rep and a community user.
- B. use `System.profiles=()` to test as a sales rep and a community user.
- **C. use `System.runAs()` to test as an administrator and a community user.**
- D. use `System.profiles()` to test as an administrator and a community user.

Answer: C

Explanation:

The `System.runAs()` method is used in test classes to enforce record sharing. This method allows you to write test methods that change user contexts to ensure that the proper record sharing is enforced. Reference:

Understanding the `runAs` Method

NEW QUESTION # 166

A developer created a JavaScript library that simplifies the development of repetitive tasks and features and uploaded the library as a static resource called `rsutils` in Salesforce. Another developer is coding a new Lightning web component (LWC) and wants to leverage the library, Which statement properly loads the static resource within the LWC?

- A. `import jsUtilities from '@salesforce/resourceUrl/jaUtiles';`

- B. `const jsUtilivty = SA.get('${SResource.isUtils}');`
- C. `<lightning-require scripts='${SResource.jsUtils}' />`
- D. `import {jsUtilities} from '@salesforce/resourceUrl/jsUtils';`

Answer: D

Explanation:

To load a static resource within a Lightning web component, you should use an import statement with the `@salesforce/resourceUrl` module. This statement correctly refers to the static resource by its name.

NEW QUESTION # 167

Refer to the exhibit

Users of this Visualforce page complain that the page does a full refresh every time the Search button is pressed. What should the developer do to ensure that a partial refresh is made so that only the section identified with opportunity List is re-drawn on the screen?

- A. Implement the `<apex:actionfunction>` tag with `immediate = true`.
- B. Implement the render attribute on the `<apex:commandButton>` tag.
- C. Enclose the DATA table within the `<apex:actionRegion>` tag.
- D. Ensure the action method search returns null.

Answer: B

Explanation:

To ensure that only a part of the Visualforce page is refreshed, developers can use the `reRender` attribute of the `<apex:commandButton>` tag. This attribute specifies the IDs of the components that should be re-rendered as a result of the action method being completed. In this case, setting the `reRender` attribute to the ID of the `<apex:pageBlockSection>` that contains the opportunity list will cause only that section to be updated on the page, resulting in a partial page refresh.

The correct answer is B because it uses the `reRender` attribute correctly to update only the specific part of the page (opportunityList) without a full page refresh.

Salesforce Developer Documentation on Visualforce AJAX Components: Visualforce Developer Guide - `CommandButton`

NEW QUESTION # 168

A company has a custom object, `Order__c`, that has a custom picklist field, `Status__c`, with values of `'New'`, `'In Progress'`, or `'Fulfilled'` and a lookup field, `Contact__c`, to `Contact`.

Which SOQL query will return a unique list of all the `Contact` records that have no `'Fulfilled'` Orders?

- A. `SELECT Id FROM Contact WHERE Id NOT IN (SELECT Id FROM Order__c WHERE Status__c = 'Fulfilled')`
- B. `SELECT Contact__c FROM Order__c WHERE Status__c <> 'Fulfilled'`
- C. `SELECT Contact__c FROM Order__c WHERE Id NOT IN (SELECT Id FROM Order__c Where Status__c = 'Fulfilled')`
- D. `SELECT Id FROM Contact WHERE Id NOT IN (SELECT Contact__c FROM Order__c WHERE Status__c = 'Fulfilled')`

Answer: D

Explanation:

The correct SOQL query to return a unique list of `Contact` records that have no `'Fulfilled'` Orders is one that selects `Ids` from the `Contact` object where the `Contact Id` is not in the set of `Contact Ids` related to `'Fulfilled'` Orders. This is done by a subquery that selects the `Contact__c` field from the `Order__c` records where the `Status__c` is `'Fulfilled'`.

NEW QUESTION # 169

Universal Containers develops a Visualforce page that requires the inclusion of external JavaScript and CSS files. They want to ensure efficient loading and caching of the page.

Which feature should be utilized to achieve this goal?

- A. Static resources
- B. ActionFunction

- C. RemoteAction
- D. PageBlockTable

Answer: A

Explanation:

Static resources are ideal for efficient loading and caching of external files in Visualforce. They allow bundling and minimizing HTTP requests.

NEW QUESTION # 170

.....

We can promise that we are going to provide you with 24-hours online efficient service after you buy our Salesforce Certified Platform Developer II - Multiple Choice guide torrent. If you purchase our Plat-Dev-301 test guide, we are going to answer your question immediately, because we hope that we can help you solve your problem about our Plat-Dev-301 exam questions in the shortest time.
