IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q162-Q167):

NEW QUESTION # 162

Which of these actions is NOT generally part of the responsibility of an IT or software engineer?

- A. Building privacy controls into the organization's IT systems or software.
- B. Implementing multi-factor authentication.
- C. Certifying compliance with security and privacy law.
- D. Providing feedback on privacy policies.

Answer: C

Explanation:

Providing feedback on privacy policies (A): While not the primary role, IT or software engineers often provide technical insights and feedback on privacy policies to ensure they are implementable within the organization's systems. Reference: IAPP CIPT Body of Knowledge.

Implementing multi-factor authentication (B): IT or software engineers are typically responsible for the implementation of security measures such as multi-factor authentication to protect systems and data.

Reference: IAPP CIPT Body of Knowledge.

Certifying compliance with security and privacy law (C): Certifying compliance is usually the responsibility of compliance officers or legal teams, not IT or software engineers. IT staff may support compliance activities, but certification is not their direct responsibility. Reference: IAPP CIPT Body of Knowledge.

Building privacy controls into the organization's IT systems or software (D): IT or software engineers are directly involved in embedding privacy controls into systems and applications as part of privacy by design and default. Reference: IAPP CIPT Body of Knowledge.

NEW QUESTION # 163

SCENARIO

Please use the following to answer the next question:

Chuck, a compliance auditor for a consulting firm focusing on healthcare clients, was required to travel to the client's office to perform an onsite review of the client's operations. He rented a car from Finley Motors upon arrival at the airport as so he could commute to and from the client's office. The car rental agreement was electronically signed by Chuck and included his name, address, driver's license, make/model of the car, billing rate, and additional details describing the rental transaction. On the second night, Chuck was caught by a red light camera not stopping at an intersection on his way to dinner. Chuck returned the car back to the car rental agency at the end week without mentioning the infraction and Finley Motors emailed a copy of the final receipt to the address on file.

Local law enforcement later reviewed the red light camera footage. As Finley Motors is the registered owner of the car, a notice was sent to them indicating the infraction and fine incurred. This notice included the license plate number, occurrence date and time, a photograph of the driver, and a web portal link to a video clip of the violation for further review. Finley Motors, however, was not responsible for the violation as they were not driving the car at the time and transferred the incident to AMP Payment Resources for further review. AMP Payment Resources identified Chuck as the driver based on the rental agreement he signed when picking up the car and then contacted Chuck directly through a written letter regarding the infraction to collect the fine.

After reviewing the incident through the AMP Payment Resources' web portal, Chuck paid the fine using his personal credit card.

Two weeks later, Finley Motors sent Chuck an email promotion offering 10% off a future rental.

What is the strongest method for authenticating Chuck's identity prior to allowing access to his violation information through the AMP Payment Resources web portal?

- A. By requiring Chuck use his credit card number in combination with the last 4 digits of his driver's license.
- **B. By requiring Chuck to call AMP Payment Resources directly and provide his date of birth and home address.**
- C. By requiring Chuck use the last 4 digits of his driver's license number in combination with a unique PIN provided within the violation notice.
- D. By requiring Chuck use the rental agreement number in combination with his email address.

Answer: B

NEW QUESTION # 164

Value sensitive design focuses on which of the following?

- A. Consent and human rights.
- B. Quality and benefit.
- **C. Ethics and morality.**
- D. Confidentiality and integrity.

Answer: C

Explanation:

Value sensitive design (VSD) is a theoretically grounded approach to the design of technology that accounts for human values in a principled and comprehensive manner¹. It brings human values to the forefront of the technical design process².

NEW QUESTION # 165

A key principle of an effective privacy policy is that it should be?

- A. Presented with external parties as the intended audience.
- **B. Written in enough detail to cover the majority of likely scenarios.**
- C. Designed primarily by the organization's lawyers.

- D. Made general enough to maximize flexibility in its application.

Answer: B

Explanation:

A key principle of an effective privacy policy is that it should be written in enough detail to cover the majority of likely scenarios. This ensures that the policy provides clear guidance on how personal data is to be handled, making it easier for employees to understand and follow, and for customers to know how their data is being used. According to the IAPP, privacy policies need to be sufficiently detailed to address the range of situations that the organization may encounter, which helps in maintaining compliance with privacy laws and regulations.

NEW QUESTION # 166

Under the Family Educational Rights and Privacy Act (FERPA), releasing personally identifiable information from a student's educational record requires written permission from the parent or eligible student in order for information to be?

- A. Released to schools to which a student is transferring.
- **B. Released to specific individuals for audit or evaluation purposes.**
- C. Released in response to a judicial order or lawfully ordered subpoena.
- D. Released to a prospective employer.

Answer: B

NEW QUESTION # 167
