Test SPLK-1004 Tutorials | SPLK-1004 Dumps Free Download

Our SPLK-1004 exam dumps are famous for instant access to download, and you can receive the downloading link and password within ten minutes, so that you can start your practice as soon as possible. Moreover, we offer you free demo to have a try, so that you can know what the complete version is like. We are pass guarantee and money back guarantee for SPLK-1004 Exam Dumps, if you fail to pass the exam, we will give refund. Online and offline chat service are available, they possess the professional knowledge for SPLK-1004 exam materials, and if you have any questions, you can consult us.

Splunk Core Certified Advanced Power User Sample Questions (Q95-Q100):

NEW QUESTION # 95
Which of the following could be used to build a contextual drilldown?

- A. $earliest$and$latest$tokens set by a global time range picker.
- B. <set>and<offset>elements withdependsandrejectsattributes.
- C. <set>and<reset>elements with arejectsattribute.
- D. <set>and<unset>elements with adepend?attribute.

Answer: D

Explanation:
Comprehensive and Detailed Step by Step Explanation:To build acontextual drilldownin Splunk dashboards, you can use<set>and<unset>elements with adepend?attribute. These elements allow you to dynamically update tokens based on user interactions, enabling context-sensitive behavior in your dashboard.
Here's why this works:
* Contextual Drilldown: A contextual drilldown allows users to click on a visualization (e.g., a chart or table) and navigate to another view or filter data based on the clicked value.
* Dynamic Tokens: The<set>element sets a token to a specific value when a condition is met, while< unset>clears the token when the condition is no longer valid. Thedepend?attribute ensures that the behavior is conditional and context-aware.
Example:
<drilldown>
<set token="selected_product">$click.value$</set>
<unset token="selected_product" depend="?"></unset>
</drilldown>
In this example:
* When a user clicks on a value, theselected_producttoken is set to the clicked value ($click.value$).
* If the condition specified independ?is no longer true, the token is cleared using<unset>.
Other options explained:
* Option B: Incorrect because$earliest$and$latest$tokens are related to time range pickers, not contextual drilldowns.
* Option C: Incorrect because<reset>is not a valid element in Splunk XML, andrejectsis unrelated to drilldown behavior.
* Option D: Incorrect because<offset>is not used for building drilldowns, anddepends/rejectsdo not apply in this context.
References:
* Splunk Documentation on Drilldowns:https://docs.splunk.com/Documentation/Splunk/latest/Viz/DrilldownIntro
* Splunk Documentation on Tokens:https://docs.splunk.com/Documentation/Splunk/latest/Viz/UseTokenstoBuildDynamicInputs

NEW QUESTION # 96
Which search generates a field with a value of "hello"?

- A. | Makeresults | fields"hello"
- B. | Makeresults | eval field =make{"hello"}
- C. | Makeresults | eval field-"hello"
- D. | Makeresults field-"hello"

Answer: C

Explanation:
To generate a field with a value of "hello" using the makeresults command in Splunk, the correct syntax is | makeresults | eval field="hello" (Option C). The makeresults command creates a single event, and the eval command is used to add a new field (named "field" in this case) with the specified value ("hello"). This is a common method for creating sample data or for demonstration purposes within Splunk searches.

NEW QUESTION # 97
Which field Is requited for an event annotation?

- A. eventype

- B. annotation_label
- C. annotation_category
- D. _time

Answer: D

Explanation:
For an event annotation in Splunk, the required field is time (Option B). The time field specifies the point or range in time that the annotation should be applied to in timeline visualizations, making it essential for correlating the annotation with the correct temporal context within the data.

NEW QUESTION # 98
If a search contains a subsearch, what is the order of execution?

- A. The order of execution depends on whether either search uses a stats command.
- B. The outer search executes first.
- C. The two searches are executed in parallel.
- D. The inner search executes first.

Answer: D

Explanation:
In a Splunk search containing a subsearch, the inner subsearch executes first. The result of the subsearch is then passed to the outer search, which often depends on the results of the inner subsearch to complete its execution.

NEW QUESTION # 99
What order of incoming events must be supplied to the transaction command to ensure correct results?

- A. Reverse lexicographical order
- B. Ascending lexicographical order
- C. Ascending chronological order
- D. Reverse chronological order

Answer: C

Explanation:
The transaction command in Splunk groups events into transactions based on common fields or characteristics.
For the transaction command to function correctly and group events into meaningful transactions, the incoming events must be supplied in ascending chronological order (Option C). This ensures that related events are sequenced correctly according to their occurrence over time, allowing for accurate transaction grouping and analysis

NEW QUESTION # 100
.....

It would be a nuisance to have to move back into the Music functions to SPLK-1004 perform basic actions, such as pausing music, However, for simple objects, they provide a quick and easy way to create smooth surfaces.

Valid SPLK-1004 Test Voucher - 100% High Hit Rate Questions Pool
