NEW QUESTION # 43
After using a third-party disk optimization software package, a technician restarts a laptop and receives the message "No operating system found." The technician verifies that the BIOS properly recognizes the SSD.
Which of the following should the technician do next?

- A. Boot from installation media and repair the MBR
- B. Replace the CMOS battery
- C. Update BitLocker settings in the BIOS
- D. Isolate the system from the corporate network

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Disk optimization tools can sometimes corrupt the Master Boot Record (MBR). If BIOS sees the drive but can't boot, repairing the MBR using installation media is the correct next step.
From All-in-One Exam Guide:
"When BIOS recognizes the drive but no OS is found, the issue is often with the boot record. Use installation media to access recovery tools and repair the MBR or boot loader."

NEW QUESTION # 44
A user reports getting a BSOD (Blue Screen of Death) error on their computer at least twice a day. Which of the following should the technician use to determine the cause?

- A. Performance Monitor
- B. System Information
- C. Event Viewer
- D. Device Manager

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Event Viewer is the primary tool used to investigate system-level errors and logs, including BSODs. When a BSOD occurs, Windows logs the error codes and associated system behavior under "System" logs in Event Viewer. This allows the technician to review crash events, identify error codes (e.g., STOP codes), and pinpoint hardware or driver issues.
B: Performance Monitor is used for real-time performance tracking and trend analysis, not crash logs.
C: System Information displays system specs but not crash logs or events.
D: Device Manager shows device status and driver issues but doesn't retain error logs related to BSODs.
Reference:

- A. Degaussing
- B. Drilling
- C. Low-level formatting
- D. Standard formatting
- E. Shredding

Answer: E

Explanation:

Shreddingphysically destroys the platters, making data recovery virtually impossible. It's more effective and accessible than degaussing or low-level formatting.
FromQuentin Docter - CompTIA A+ Complete Study Guide:
"Physical destruction methods like shredding are the most secure options for ensuring data on failed drives cannot be recovered."

B: Computer Management allows configuration of services and local users, but not network access.
C: User Accounts is for account setup and control, but enabling remote access requires firewall configuration.
D: Ease of Access is unrelated to remote connectivity-it's for accessibility features.
