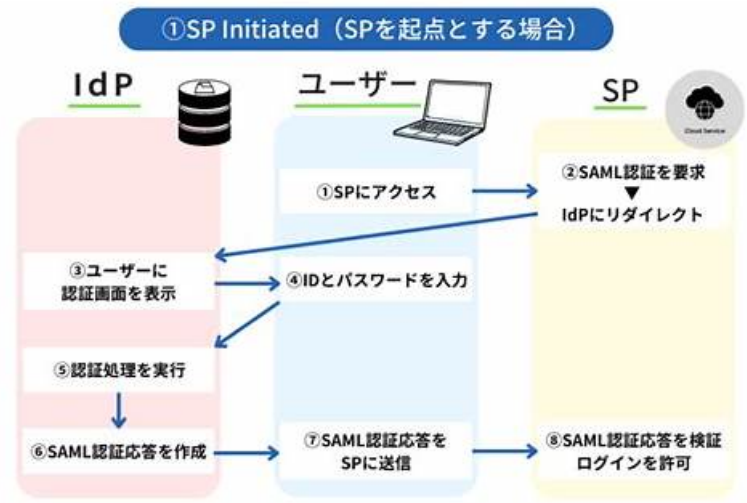
合格をつかみ取るIDP試験対応



幸せの生活は自分で作られて得ることです。だから、大人気なIT仕事に従事したいあなたは今から準備して努力するのではないでしょうか？さあ、ここで我々社のCrowdStrikeのIDP試験模擬問題を推薦させてくださいませんか。我が社のIDP問題集は必ずあなたの成功へ道の助力になれます。

GoShikenのCrowdStrikeのIDP試験トレーニング資料は試験問題と解答を含まれて、豊富な経験を持っているIT業種の専門家が長年の研究を通じて作成したものです。その権威性は言うまでもありません。うちのCrowdStrikeのIDP試験トレーニング資料を購入する前に、GoShikenのサイトで、一部分のフリーな試験問題と解答をダンロードでき、試用してみます。君がうちの学習教材を購入した後、私たちは一年間で無料更新サービスを提供することができます。

信頼的なIDP受験記対策 & 合格スムーズIDP学習教材 | 効果的なIDPシュミレーション問題集

タスクを効率的に完了できない場合は、IDP学習教材の使用をお勧めします。特定の状況を評価することにより、合理的なスケジュールを提供し、IDP試験トレーニングガイドの拡張可能なバージョンを提供し、短時間でより多くの知識をすばやく把握できます。同時に、あなたはあなたの周りの人々以上のことをします。これがIDPテストガイドでできることです。 IDP学習ガイドは、効率を向上させ、より高い品質でタスクを完了するためのものです。

CrowdStrike Certified Identity Specialist(CCIS) Exam 認定 IDP 試験問題 (Q35-Q40):

質問 # 35
The configuration of the Azure AD (Entra ID) Identity-as-a-Service connector requires which three pieces of information?

- A. Tenant Domain, Application ID, Application Secret
- B. Tenant Domain, Client Secret, User Identifier
- C. Tenant Domain, Token, Configuration File
- D. Tenant Domain, Application ID, Scope

正解：A

解説：
To integrate Falcon Identity Protection withAzure AD (Entra ID)as an Identity-as-a-Service (IDaaS) provider, specific application-level credentials are required. According to the CCIS curriculum, the connector configuration requiresTenant Domain,Application (Client) ID, andApplication Secret.
These values are generated when registering an application in Azure AD and are used to authenticate Falcon Identity Protection

securely via OAuth-based API access. This method ensures least-privilege access and allows the connector to ingest cloud authentication activity and apply SSO-related policy enforcement.
Other options list incomplete or incorrect credential combinations. Therefore,Option Dis the correct and verified answer.

質問 # 36
Which of the following IDaaS connectors will allow Identity to ingest cloud activity along with applying SSO Policy?

- A. Azure NPS
- B. Okta SSO
- C. ADFS
- D. SAML

正解： B

解説：
Falcon Identity Protection integrates withIdentity-as-a-Service (IDaaS)providers to ingest cloud authentication activity and enforce identity-based policies. According to the CCIS curriculum,Okta SSOis a supported IDaaS connector that enables Falcon to ingestcloud authentication eventswhile also applying Single Sign-On (SSO) policies.
Okta SSO provides rich identity telemetry, including login attempts, device context, and authentication outcomes. This data allows Falcon Identity Protection to correlate on-premises and cloud-based identity activity, extending identity risk analysis beyond Active Directory.
The other options are incorrect:
* ADFSis an on-premises federation service, not a cloud IDaaS.
* Azure NPSis used for RADIUS-based MFA, not SSO ingestion.
* SAMLis a protocol, not an IDaaS connector.
Because Okta SSO provides both cloud activity ingestion and SSO enforcement,Option Bis the correct and verified answer.

質問 # 37
For false positives, the Detection details can be set to new"Actions"using:

- A. remediations
- B. exits
- C. exceptions
- D. recommendations

正解： C

解説：
When an identity-based detection is determined to be afalse positive, Falcon Identity Protection allows administrators to take corrective action usingexceptions. According to the CCIS curriculum, exceptions are the mechanism by which detections can be suppressed for specific entities or conditions without disabling the detection entirely.
Exceptions are configured from theDetection detailsview and are intended to handle known, acceptable behavior that would otherwise continue to trigger detections. This allows security teams to reduce noise while maintaining visibility into true threats.
Exceptions are especially valuable in environments with complex authentication patterns or legacy configurations.
The other options are incorrect:
* Exitsare not a detection control mechanism.
* Remediationsrefer to corrective actions, not suppression logic.
* Recommendationsprovide guidance but do not change detection behavior.
By usingexceptions, Falcon ensures that false positives are handled in a controlled and auditable way, aligning with best practices outlined in the CCIS material. Therefore,Option Cis the correct answer.

質問 # 38
Which of the following isNOTa default insight but can be created with a custom insight?

- A. GPO Exposed Password
- B. Compromised Password
- C. Using Unmanaged Endpoints

- D. Poorly Protected Accounts with SPN

正解：D

解説：
In Falcon Identity Protection,default insightsare prebuilt analytical views provided by CrowdStrike to immediately highlight common and high-impact identity risks across the environment. These default insights are automatically available in theRisk AnalysisandInsightsareas and are designed to surface well-known identity exposure patterns without requiring customization. Examples ofdefault insightsincludeUsing Unmanaged Endpoints,GPO Exposed Password, and Compromised Password. These insights are natively provided because they represent frequent and high-risk identity attack vectors such as credential exposure, unmanaged authentication sources, and password compromise, all of which directly contribute to elevated identity risk scores.
Poorly Protected Accounts with SPN (Service Principal Name), however, isnot provided as a default insight. While Falcon Identity Protection does collect and analyze SPN-related risk signals-such as Kerberoasting exposure and weak service account protections-this specific grouping must be created by administrators usingcustom insight filters. Custom insights allow teams to define precise conditions, combine attributes (privilege level, SPN presence, password age, MFA status), and tailor risk visibility to their organization's threat model.
This distinction is emphasized in the CCIS curriculum, which explains thatcustom insights extend beyond default coverage, enabling deeper, organization-specific identity risk analysis. Therefore,Option Dis the correct answer.

質問 # 39
Within which Identity Protection menu would an administrator enableAuthentication Traffic Inspection (ATI)for a domain?

- A. Enforce > Policy Rules
- B. Enforce > Policy Settings
- C. Configure > Settings
- D. Configure > Identity Configuration Policies

正解：D

解説：
Authentication Traffic Inspection (ATI) is enabled throughIdentity Configuration Policies, which define how the Falcon sensor captures and inspects identity-related network traffic. According to the CCIS documentation, ATI configuration is performed underConfigure > Identity Configuration Policies.
These policies allow administrators to specify which authentication protocols are inspected, which domain controllers are covered, and how identity telemetry is collected. This configuration step is mandatory to enable identity visibility and detection capabilities.
The Enforce menu is used for policy rules and automated actions, not traffic inspection. General settings do not control sensor inspection behavior. Because ATI directly affects sensor data capture, it is managed exclusively through Identity Configuration Policies.
Therefore,Option Dis the correct and verified answer.

質問 # 40
