CompTIA DataSys+ Certification Exam Sample Questions (Q26-Q31):

NEW QUESTION # 26

A business analyst queries the same few tables every quarter and does not want to write new SQL code every time. Which of the following would best support the business analyst's needs and allow the database administrator to optimize disk space?

- A. Stored procedure
- B. Table
- C. Function
- **D. View**

Answer: D

NEW QUESTION # 27

Which of the following best describes the function of a wildcard in the WHERE clause?

- A. An exact match is not possible in a CREATE statement.
- **B. An exact match is not possible in a SELECT statement.**
- C. An exact match is necessary in a CREATE statement.
- D. An exact match is necessary in a SELECT statement.

Answer: B

Explanation:

A wildcard in the WHERE clause allows pattern matching instead of requiring an exact match when filtering records in a SELECT statement.

NEW QUESTION # 28

A database professional is considering denormalizing a database. Which of the following documents should be used to analyze the database's structure?

- A. Data dictionaries
- B. SOP
- C. UML diagrams
- **D. ERD**

Answer: D

Explanation:

The document that should be used to analyze the database's structure is an ERD. An ERD, or Entity Relationship Diagram, is a graphical representation of the entities (tables), attributes (columns), and relationships (constraints) in a database. An ERD helps to visualize the structure and design of the database, as well as the dependencies and associations among the tables. An ERD can also help to evaluate the level of normalization of the database, which is a process that organizes data into tables and columns to reduce redundancy and improve consistency. By using an ERD, a database professional can consider denormalizing a database, which is a process that introduces some redundancy or duplication of data to improve performance or simplify queries.

The other options are either different types of documents or not related to the database's structure. For example, an SOP, or Standard Operating Procedure, is a document that describes the steps and procedures for performing a specific task or operation; a data dictionary is a document that describes the metadata (information about data) of a database; a UML diagram is a graphical representation of a software system or its components using the Unified Modeling Language (UML).

NEW QUESTION # 29

Which of the following best describes the category of SQL commands required to revoke access to database objects?

- A. IDML
- B. IDDL
- **C. DCL**
- D. TCL

Answer: C

Explanation:

The category of SQL commands that is required to revoke access to database objects is DCL. DCL, or Data Control Language, is a subset of SQL commands that are used to control or manage the access or permissions of users or roles on a database. DCL includes commands such as GRANT and REVOKE. GRANT is a DCL command that is used to grant privileges or roles to users or roles on specific objects in a database, such as tables, views, procedures, etc. REVOKE is a DCL command that is used to revoke privileges or roles from users or roles on specific objects in a database. For example, the following statement uses the REVOKE command to revoke the SELECT privilege from user Alice on table employee:

REVOKE SELECT ON employee FROM Alice;

The other options are either different categories of SQL commands or not related to SQL commands at all. For example, IDDL is not a valid acronym or category of SQL commands; IDML is not a valid acronym or category of SQL commands; TCL, or Transaction Control Language, is a subset of SQL commands that are used to control or manage transactions on a database, such as committing or rolling back changes. Reference: CompTIA DataSys+ Course Outline, Domain 4.0 Data and Database Security, Objective 4.2 Given a scenario, implement security controls for databases.

NEW QUESTION # 30

Which of the following commands when executed will rebuild statistics against user-defined tables in a database?

- A. **sp_updatestats**
- B. DBCC UPDATEUSAGE
- C. sp_autostats
- D. DBCC SHOW_STATISTICS

Answer: A
