Our Salesforce Arch-303 Exam Questions are created and curated by industry specialists. Fast2test Is Here To Provide Top-Notch Salesforce Arch-303 Exam Questions

Salesforce Certified B2C Commerce Architect Sample Questions (Q52-Q57):

NEW QUESTION # 52
During a load test the storefront shows steady but slow performance on all the paces being tested. The Architect opens Pipeline Profiler and sorts the data by *total time" column. The following come as the top Ave items:
□
Which controller should the Architect focus on to further investigate the performance issue?

- A. Product-Detail as It has the highest total time and highest maximum time.
- B. Product-HitTile asit has the highest hits during the load test.
- C. Search Show as this Is one of the key controllers that the customer uses
- D. Home-IncludeHeaderMenu as It has highest average time.

Answer: A

Explanation:
Focusing on the 'Product-Detail' controller is prudent given that it has the highest total time and the highest maximum time (Answer C), suggesting that it significantly contributes to the overall load and potential slowdowns on the site. By analyzing and optimizing this controller, the architect can potentially achieve the most substantial improvement in performance. Efforts might include optimizing database queries, caching frequently requested data, or simplifying complex logic in the Product-Detail page's processing.

NEW QUESTION # 53
A company manages its regional operations asseparate businesses. The regional sites (Site A and Site B) operate with:
* Separate realms
* Deferent code bates
* Different category navigation menus
* Frequent updates on category structure
The requirement from the business is to provide hreflang link tags on category pages pointing to the same category on the other regional site. Example MTML for one of these links as displayed on Site A is:

Which solution should the Architect choose while keeping performance in mind?

- A. Create a new custom object type Populate the hreflang mapping for each category and locale in this custom object. Use the custom object to display the hreflang link tag.
- B. Create a new customattribute on the Category. Populate the attribute with the other entire site URLs corresponding to locales In JSON Format. Use the attribute to display the hreflang link tag.
- C. Create a custom Business Manager module. Ask the business to maintain the hreflang link tags for each regional site in this Business Manager module.
- D. Create additional locales in al realms create a new custom attribute on the category that is localized. Populate the attribute with the other site URLs and use it to display the hreflang tag.

Answer: A

Explanation:
For a multi-regional setup with different realms and frequent updates, using a custom object to manage hreflang mappings offers flexibility and scalability. Custom objects can efficiently store URL mappings for each category across different locales, making it easier to manage and update as category structures change.
This method allows for centralized control over hreflang mappings and simplifies maintenance compared to other options which might involve more complex integrations or manual updates.

NEW QUESTION # 54
During implementation, the team found that there is a notification controller exposed for an external service that marks the order as paid when notification is received. The notification URL is sent to the service together with the payment request and contains only the URL with orderlD as the parameter.
What should the Architect recommend to the team in order to prevent the unauthorized usage of the controller to mark the orders as paid?

- A. Add a customer number in the callback URL and match the customer number against the one stored on the order.
- B. Add an order token in the callback URL and match the token against the one stored on the order.
- C. Add a session attribute and validate it on the callback.
- D. Add HTTPS restriction to the controller start node.

Answer: B

Explanation:
To enhance the security of the notification controller exposed for marking orders as paid, the recommended approach is to add an order-specific token to the callback URL (Answer C). This token should be verified against a stored value on the order to ensure the authenticity and integrity of the payment notification. This method prevents unauthorized use of the controller, as only callbacks containing the correct, order-specific token would be allowed to mark orders as paid. This strategy is essential in maintaining secure and reliable transaction processes within Salesforce B2C Commerce.

NEW QUESTION # 55
A developer is validating the pipeline cache and noticed that the PDP page is very low cached. The one parameter is snowing the position on the product fisting page upon checking the site and code.
What should the developer adjust in order to improve the page cache hit ratio, keeping in mind that the client is Insisting on the parameter for their analytics?

- A. Rework the Implementation so the parameter is not passed In the URL and isread from the URL hash.
- B. Rework the implementation so it reads the parameter on client-side, passesit to the analytics and exclude It from cache parameters.
- C. Add the key to the cache exclude parameters.

- D. Rework the Implementation so it doesn't depend on that parameter.

Answer: C

NEW QUESTION # 56
A new dent is moving from their existing ecommerce platform to B2C Commerce. They have an existing service that connects to the Email Marketing System. The endpoint of the service can directly parse the data posted by the customer from the Storefront page for marketing materials subscriptions. it if required that theservice implementation on the B2C Commerce site supports authentication and encoding.
What type should the Architect document this new service as?

- A. Generic
- B. SOAP
- C. HTTP Form
- D. HTTP

Answer: D

Explanation:
For a service that connects to an Email Marketing System where the endpoint can directly parse data posted by the customer from the storefront for marketing material subscriptions, documenting the service as an HTTP service is appropriate. This type of service will likely involve straightforward HTTP requests with authentication and encoding to ensure data integrity and security. The HTTP service type supports these requirements effectively, facilitating secure, reliable data transmission between the storefront and the email marketing system.

NEW QUESTION # 57
