Fortinet NSE 7 - Public Cloud Security 7.6 Architect Sample Questions (Q40-Q45):

NEW QUESTION # 40
An organization is deploying FortiDevSec to enhance security for containerized applications, and they need to ensure containers are monitored for suspicious behavior at runtime. Which FortiDevSec feature is best for detecting runtime threats?

- A. FortiDevSec Software Composition Analysis (SCA)
- B. FortiDevSec Dynamic Application Security Testing (DAST)
- C. FortiDevSec Static Application Security Testing (SAST)
- D. FortiDevSec Container Scanner

Answer: D

Explanation:
The FortiDevSec container scanner monitors containerized applications at runtime to detect suspicious behavior, vulnerabilities, and misconfigurations. This feature is specifically designed for securing container environments beyond build-time checks like SAST, DAST, or SCA.

NEW QUESTION # 41
How does an administrator secure container environments in Amazon AWS from newly emerged security threats?

- A. Using Amazon AWS_S3-related application control signatures.
- B. Using Amazon AWS-related application control signatures.
- C. Using distributed network-related application control signatures.
- D. Using Docker-related application control signatures.

Answer: D

Explanation:
To secure container environments, FortiGate and FortiOS rely on Docker-related application control signatures, which detect and block threats specific to containerized workloads and Docker-based traffic.

NEW QUESTION # 42
Your administrator instructed you to deploy an Azure vWAN solution to create a connection between the main company site and branch sites to the other company VNETs.
What is the best connection solution available between your company headquarters, branch sites, and the Azure vWAN hub?

- A. An L2TP connection
- B. SSL VPN connections
- C. GRE tunnels
- D. ExpressRoute

Answer: D

Explanation:
The best solution for connecting headquarters, branch sites, and Azure vWAN hubs is ExpressRoute, as it provides a private, reliable, and high-bandwidth connection directly into Azure, unlike VPN-based solutions such as L2TP, GRE, or SSL VPN.

NEW QUESTION # 43
An administrator is relying on an Azure Bicep linter to find possible issues in Bicep files.
Which problem can the administrator expect to find?

- A. One or more modules are not using runtime values as parameters.
- B. There are output statements that contain passwords.
- C. The resources to be deployed exceed the quota for a region.
- D. Some resources are missing dependsOn statements.

Answer: D

NEW QUESTION # 44
Refer to the exhibit.
A senior administrator in a multinational organization needs to include a comment in the template shown in the exhibit to ensure that administrators from other regions change the Amazon Machine Image (AMI) ID to one that is valid in their location.
How can the administrator add the required comment in that section of the file?

- A. The administrator can add the comment starting with the # character next to the "Resources" section.
- B. The administrator must convert the template file to YAML format to add a comment.
- C. The administrator must update the AWSTemplateFormatVersion to the latest version.
- D. The administrator can include the comment with the aws cloudformation update-stack command.

Answer: B

Explanation:
According to theFortiOS 7.6 AWS Administration Guideand theFortinet 7.4 Public Cloud Securitystudy materials regarding infrastructure as code (IaC) for cloud deployments:
* JSON Format Limitations (Option B):The exhibit shows an AWS CloudFormation template inJSON (JavaScript Object

Notation) format. JSON, by its official specification, does not support comments.

There is no native syntax (like // or /* */) to include remarks that are ignored by the CloudFormation parser.

* YAML Support: To add descriptive comments-such as instructing other regional administrators to update the AMI ID-the administrator must convert the template into YAML format. YAML is a superset of JSON and specifically supports comments using the # character.

* Best Practice for Multinational Deployments: For organizations operating across multiple AWS regions, using YAML is the recommended standard because it allows for inline documentation, making templates more maintainable and easier for different teams to understand regional requirements.

Why other options are incorrect:

* Option A: Comments are part of the template file itself, not a parameter or flag within the aws cloudformation update-stack CLI command.

* Option C: While # is the correct character for comments in YAML, it is invalid syntax in JSON and would cause the CloudFormation stack creation to fail with a parsing error.

* Option D: The AWSTemplateFormatVersion "2010-09-09" is currently the only valid version for CloudFormation templates; updating it does not add JSON comment support.
