ServiceNow Certified Implementation Specialist - Hardware Asset Management Sample Questions (Q70-Q75):

NEW QUESTION # 70

What is the default state of a newly created asset?

- A. In stock
- B. Consumed
- C. In use
- D. On order

Answer: C

NEW QUESTION # 71

Classes are represented as tables in the ServiceNow database. Which is the base asset class?

- A. cmdb_asset
- B. alm_asset
- C. alm_hardware
- D. cmdb_hardware

Answer: B

Explanation:

* Classes are represented as tables in the ServiceNow database that define the attributes and relationships of a specific type of record¹

* The base asset class is the alm_asset table, which contains the common fields and properties for all types of assets, such as hardware, software, consumable, etc.²

* The alm_asset table is extended by other asset classes, such

as alm_hardware, alm_software, alm_consumable, etc., which add more specific fields and properties for each asset type²

* The cmdb_asset table is not a class, but a view that joins the alm_asset table and the cmdb_ci table, which is the base configuration item (CI) class³

* The cmdb_hardware table is a CI class, not an asset class, that contains the common fields and properties for all types of hardware CIs, such as computers, devices, network equipment, etc.⁴ References: 1: Tables and Classes - ServiceNow 2: Asset [alm_asset] table - ServiceNow 3: Asset and Configuration Item [cmdb_asset] view - ServiceNow 4: Hardware [cmdb_ci_hardware] class - ServiceNow

NEW QUESTION # 72

Under which condition does the Now Platform NOT create an asset automatically?

- A. Configuration normalization
- B. Data justification
- C. Model characterization
- D. Data synching
- E. Enforced CI verification

Answer: D

NEW QUESTION # 73

When a Document Template is created from an HR Case, the name of the person who created the document is added to the name of the attachment.

Why?

- A. It indicates who should sign the document
- B. It indicates the Opened for user
- C. It indicates who generated the document
- D. It indicates who the document is about

Answer: C

Explanation:

According to the ServiceNow Product Documentation on Document Templates¹, document templates are records that define the layout and content of a document that can be generated from a table record, such as an HR case¹. They can include information such as fields, variables, images, and signatures¹.

According to the ServiceNow Product Documentation on Generate Documents from Templates², when a document template is created from an HR case, the name of the person who created the document is added to the name of the attachment². For example, if John Smith created a document from the template Employee Termination Letter, the attachment name would be Employee Termination Letter - John Smith.docx².

The reason for this naming convention is to indicate who generated the document, which can be useful for auditing and tracking purposes². It can also help to avoid confusion or duplication if multiple documents are generated from the same template by different users².

The other options are not the correct explanation for why the name of the person who created the document is added to the name of the attachment. It does not indicate who should sign the document, as the signature can be added as a variable in the template¹. It does not indicate the Opened for user, as the document can be generated for any HR case, not necessarily the one that the user opened². It does not indicate who the document is about, as the document can contain information about multiple parties, such as the employee, the manager, and the HR representative².

2: ServiceNow Product Documentation: Generate Documents from Templates

NEW QUESTION # 74

Which is NOT a component of a hardware asset's lifecycle?

- A. Dispose
- B. Receive
- C. Procure
- D. Request
- E. Consume

Answer: E

Explanation:

According to the ServiceNow Hardware Asset Management documents, a hardware asset's lifecycle consists of the following stages: Procure, Receive, Deploy, Maintain, and Dispose¹. These stages correspond to the options A, D, and E in the question. The option B, Request, is also a valid stage in the hardware asset management process, as it involves identifying the hardware needs and initiating the procurement process².

However, the option C, Consume, is not a component of a hardware asset's lifecycle, as it is not mentioned in the ServiceNow documents. Consume is more relevant to software assets, which are used or consumed by end-users or applications³. Therefore, the correct answer is C. Consume. References:
