NEW QUESTION # 26
What is the role of the WalkMe snippet in the deployment process?

- A. It secures user data through encryption
- B. It enables WalkMe content to be displayed over applications

- C. It ensures compatibility with all versions of application software
- D. It customizes content for each user group

Answer: B

Explanation:
The primary role of the WalkMe snippet in the deployment process is:
B . It enables WalkMe content to be displayed over applications □
□ Why this is correct
WalkMe's snippet is a small JavaScript snippet that's added to the application's codebase. It functions as the core mechanism that:
* Loads and overlays WalkMe guidance (like Smart Walk-Thrus, tooltips, menus) onto target applications
* Differentiates between Test and Production environments-only injected when appropriate-so content is shown in the correct setting.
Without the snippet, WalkMe content built in the Editor would not render within the application UI.
□ Why the other options are incorrect
* A. Ensuring compatibility with all versions of application software
While snippet compatibility is important, its core function isn't version matching-it's content delivery.
* C. Securing user data through encryption
Security and encryption are managed via WalkMe's backend, CDN delivery, and network infrastructure- not the snippet itself.
* D. Customizing content for each user group
Segmentation and content targeting are handled by WalkMe's configuration (Conditions/Segments), not by the snippet.
□ Final Answer
B . It enables WalkMe content to be displayed over applications.
