IIBA-AAC Team Sample Questions / Answers

1. A business analyst has been assigned to a project for 4 weeks. During this time, they have been instructed from the project management team to follow a specific documentation process to conduct all business analysis related documents. The product team has been voicing concerns on the lack collaboration and communication opportunities with the decision makers and do not find value over following a defined plan to develop all business documents. These concerns may be attributed to an expectation that is tied to which agile manifesto?

- a) Responding to change over following a plan
- b) Working software over comprehensive documentation
- c) Individuals and interactions over processes and tools
- d) Addressing change over contract negotiations - ✓/C

2. There has been an issue uncovered during the transformation of an organization to an agile environment. The lack of understanding of agile mindset from the decision makers are causing a negative impact on the team's productivity. What aspect of the agile mindset can a business analysis practitioner teach the decision maker to effectively adapt an agile mindset?

- a) Adapt to a single agile framework and apply a single combination of technique and process regarding to the context

With the rapid development of computer, network, and semiconductor techniques, the market for people is becoming more and more hotly contested. Passing a IIBA-AAC exam to get a certificate will help you to look for a better job and get a higher salary. If you are worried about your job, your wage, and a IIBA-AAC Certification, if you are going to change this, we are going to help you solve your problem by our IIBA-AAC exam torrent with high quality, now allow us to introduce you our IIBA-AAC guide torrent.

IIBA-AAC certification exam is based on the Agile Extension to the Business Analysis Body of Knowledge (BABOK). This extension provides guidance and best practices for business analysts working in agile environments. IIBA-AAC exam tests candidates on their understanding of agile methodologies, practices, and techniques, as well as their ability to apply them in real-world scenarios. IIBA-AAC exam is also designed to assess candidates' critical thinking and problem-solving abilities.

To be eligible for the IIBA-AAC Certification Exam, candidates must have at least 2,000 hours of experience working on agile teams or with agile methodologies, and they must have completed at least 21 hours of professional development in agile analysis topics. IIBA-AAC exam is a 3-hour, computer-based exam with 85 multiple-choice questions. Candidates who pass the exam will receive the IIBA-AAC certification, which is valid for three years and requires ongoing professional development to maintain.

IIBA Agile Analysis Certification Sample Questions (Q63-Q68):

NEW QUESTION # 63

The team decides to use real-world examples, recognizing it engages stakeholders by:

- A. Using models to set context and identify scope to help design the solution
- B. Delivering a solution within constraints
- C. Allowing sponsors to prioritize features
- **D. Gathering feedback for potential solutions to a problem**

Answer: D

Explanation:

Using real-world examples is a cornerstone of the "Get Real Using Examples" principle, which emphasizes the use of tangible scenarios to drive analysis. This approach is particularly effective for gathering feedback on potential solution options because it moves the conversation from the abstract to the concrete. When stakeholders see how a solution would handle a specific, familiar scenario, they are much more likely to provide accurate and insightful feedback regarding its viability and value. This technique helps to validate assumptions and identify risks early in the process. In an agile context, these examples serve as a bridge between elicitation and validation, ensuring that the team doesn't just build what was "asked for," but what is actually needed to solve the problem in a real-world setting.

NEW QUESTION # 64

When decomposing stories, the concept of "breadth before depth" signifies progressively breaking down:

- A. Estimates and resources required to accomplish the story
- B. Tests to align with usable functionality delivered through each story
- C. Backlog items to the lowest level of detail upfront
- **D. Business goals into user stories representing smaller increments of value**

Answer: D

NEW QUESTION # 65

Given the importance of attaining feedback to inform activities, the delivery team determines it is important to collect that feedback through:

- A. Strictly well defined processes to ensure efficient use of time
- B. Only informal methods as structured processes take too long
- **C. Structured processes and informally to maximize input**
- D. Only scheduled conversations with management to get the most useful feedback

Answer: C

NEW QUESTION # 66

The team is making important decisions when assessing the initiative they are working on. Feedback received from the Delivery Horizon informs:

- **A. Priority and sequencing of solution components**
- B. Identification of reporting requirements
- C. How to build the required solution components
