VMware 2V0-16.25 시험요강:

| 주제 | 소개 |
|------|---|
| 주제 1 | <ul style="list-style-type: none"> Plan and Design the VMware by Broadcom Solution: This section of the exam measures the ability of VMware Solution Architects to plan and design solutions. While there are no specific testable objectives included, the focus is on preparing professionals to design VMware-based solutions that align with organizational goals and best practices. |
| 주제 2 | <ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the understanding of IT Infrastructure Architects and covers foundational concepts of architectures, emerging technologies, and industry standards. Although no testable objectives are listed here, it establishes the baseline knowledge needed to interpret and design VMware-related environments effectively. |
| 주제 3 | <ul style="list-style-type: none"> Deploy, Configure, and Operate VMware vSphere Foundation (VVF): This section of the exam measures the expertise of Data Center Administrators and emphasizes hands-on skills in deploying and configuring VMware vSphere Foundation environments. Candidates must understand the components of a VVF deployment, configure Supervisors within clusters, and manage identity, access control, licensing, and certificate management. The objectives also extend to lifecycle management within the vSphere Foundation. Furthermore, it explores operational tasks including monitoring and analyzing logs, configuring alerting, managing dashboards, and integrating with VMware Cloud Foundation (VCF) Operations. Candidates will also be tested on cost and pricing configuration, compliance monitoring, and security hardening practices. Finally, automation skills are validated through deploying services with Supervisors, running Kubernetes workloads, using VM services, and integrating VCF Operations Orchestrator to support enterprise automation. |
| 주제 4 | <ul style="list-style-type: none"> Troubleshoot and Optimize the VMware Solution: This section of the exam measures the ability of Systems Engineers to troubleshoot and optimize VMware-based environments. While no explicit testable objectives are listed, candidates are expected to apply their problem-solving skills to diagnose, resolve, and enhance VMware solutions for improved reliability and performance. |

| | |
|------|---|
| 주제 5 | <ul style="list-style-type: none"> VMware vSphere Foundation Fundamentals: This section of the exam measures the skills of Virtualization Engineers and focuses on the essentials of virtualization technology. It introduces the principles of virtualization, explores use cases, and highlights the value it brings to businesses. Candidates are expected to demonstrate knowledge of VMware compute components such as vCenter and ESX, cluster configuration, and lifecycle management of virtual machines. It also covers secure workload operations, encryption, and managing resources with content libraries. In addition, storage fundamentals are examined through configuring vSphere storage, deploying VMware vSAN clusters, defining storage policies, and ensuring data availability. Networking fundamentals are also introduced, requiring the ability to differentiate between VMware vSphere networking components. |
|------|---|

2V0-16.25시험덤프샘플 & 2V0-16.25합격보장 가능 덤프공부

우리ExamPassdump는 많은IT전문가들로 구성되었습니다. 우리의 문제와 답들은 모두 엘리트한 전문가들이 만들어 낸 만큼 시험문제의 적중률은 아주 높습니다. 거의 100%의 정확도를 자랑하고 있습니다. 아마 많은 유사한 사이트들도 많습니다. 이러한 사이트에서 학습가이드와 온라인서비스도 지원되고 있습니다만 우리ExamPassdump는 이미 이러한 사이트를 뛰어넘은 실력으로 업계에서는 우리만의 이미지를 지키고 있습니다. 우리는 정확한 문제와답만 제공하고 또한 그 어느 사이트보다도 빠른 업데이트로 여러분의 인증시험을 안전하게 패스하도록합니다.VMware 2V0-16.25인증시험을 응시하려는 분들은 저희 문제와 답으로 안심하시고 자신 있게 응시하시면 됩니다. 우리 ExamPassdump는 여러분이 100%VMware 2V0-16.25인증시험을 패스할 수 있다는 것을 보장합니다.

최신 VCP-VVF Admin 2V0-16.25 무료 샘플문제 (Q48-Q53):

질문 # 48

An administrator has noticed occasional performance degradation during peak usage times and needs to address this issue proactively by creating a mechanism that doesn't give data or outputs too often to overload the team.
Which of the following steps is required to create the mechanism in VMware Cloud Foundation (VCF) Operations?

- A. Implement an alert with the default alert settings.
- B. Implement an alert that notifies the IT team during off-peak hours.
- C. Create a custom dashboard to visualize all alerts.
- D. Implement an alert specifying the metric, threshold, and duration.

정답: D

설명:

The administrator wants to proactively manage performance degradation during peak times without overwhelming the IT team.

- * The correct method is to create a custom alert with specific metric, threshold, and duration(A).
- * This ensures alerts are triggered only when sustained performance issues occur, reducing noise.
- * B. Default alert settings# Too generic, may cause alert storms.
- * C. Custom dashboard# Useful for visualization but not proactive alerting.
- * D. Notify during off-peak hours# Defers the issue, not proactive.

VMware Docs: [Configuring Alerts in vRealize Operations]

질문 # 49

An administrator is tasked to configure Service Discovery in VMware Cloud Foundation (VCF) Operations for Linux Guest Operating Systems. For security reasons a non-root user needs to be used and all required steps for the Guest OS have already been completed.

What are the two steps the administrator needs to take? (Choose two.)

- A. Activate Service Discovery in the required VCF Operations NSX instance.
- B. Activate Service Discovery in the required VCF Operations vCenter instance.
- C. Deactivate Use Sudo in the Service Discovery instance.

- D. Activate Use Sudo in the vCenter instance.
- E. Activate Use Sudo in the Service Discovery instance.

정답: B,E

설명:

To configure Service Discovery for Linux Guest OS in VCF Operations using a non-root user:

- * Activate Service Discovery in the vCenter instance to start discovery operations. (B)
- * Enable Use Sudo in the Service Discovery instance so the non-root account can run necessary privileged commands. (E) Other options:
- * A. Activate Use Sudo in vCenter instance# Wrong, this is configured in Service Discovery.
- * C. Activate in NSX instance# Not applicable; Service Discovery integrates with vCenter.
- * D. Deactivate Use Sudo# Opposite of required security setting.

VMware Cloud Foundation 9.0 -Service Discovery Setup

VMware Docs: Service Discovery for VMs in vRealize Operations

질문 # 50

An administrator is tasked to create a new storage policy for an eight-node VMware vSAN Original Storage Architecture (OSA) cluster.

The following specifications have been provided:

- * Tolerate up to two host failures.
- * Ensure maximum usable capacity.

Which storage policy settings must the administrator configure?

- A. 2 failures - RAID-5
- B. 3 failures - RAID-1
- C. 1 failure - RAID-5
- D. 1 failure - RAID-1

정답: A

설명:

For an 8-node vSAN OSA cluster, the administrator needs a storage policy that:

- * Tolerates 2 host failures, and
- * Provides maximum usable capacity.
- * RAID-5/6 (erasure coding) is more capacity-efficient than RAID-1 mirroring.
- * To tolerate 2 failures, the correct policy is RAID-5 with FTT=2.
- * RAID-1 (mirroring) would consume far more capacity, reducing usable space.

Other options:

- * A. 1 failure - RAID-1# Only tolerates one failure.
- * C. 3 failures - RAID-1# Provides higher resilience but uses much more capacity, not maximum efficiency.
- * D. 1 failure - RAID-5# Tolerates only one failure.

VMware vSphere 9.0 -vSAN Storage Policy Rules (FTT & RAID)

VMware Docs: vSAN Erasure Coding (RAID-5/6)

질문 # 51

Which action allows a Content Library in VMware vSphere Foundation (VVF) to be accessed by other VMware vCenter Server instances?

- A. Publish the Content Library.
- B. Store the library on a shared NFS datastore.
- C. Store the library on a vSAN datastore.
- D. Enable automatic synchronization.

정답: A

설명:

To allow a Content Library in vSphere Foundation to be accessed by other vCenter Server instances, it must be published.

* Once published, other vCenters can subscribe to the library.

* Synchronization ensures subscribed vCenters receive updated templates and ISOs.

Other options:

* A. Automatic synchronization# Works only for subscribers, not for publishing.

* B. Store on vSAN datastore# Storage choice does not enable multi-vCenter access.

* C. Store on NFS datastore# Similar, datastore type does not matter.

References:

질문 # 52

An administrator is tasked with importing a vSphere Lifecycle Manager image and applying it to a cluster containing six hosts, with two of the hosts in maintenance mode. The administrator uses the vSphere Client, navigates to the cluster, and edits the remediation settings to enable Parallel Remediation and clicks the Remediate All button to execute the remediation process.

What is the expected result of this remediation process?

- A. The image is remediated on the four hosts not in maintenance mode, in parallel. The hosts in maintenance mode are not remediated.
- B. The image is remediated on the hosts in maintenance mode in parallel, and when completed the hosts not in maintenance mode are remediated in parallel.
- C. The image is remediated on the four hosts not in maintenance mode, in sequence. The hosts in maintenance mode are not remediated.
- **D. The image is remediated on the hosts in maintenance mode in parallel. The hosts not in maintenance mode are not remediated.**

정답: D

설명:

When using vSphere Lifecycle Manager (vLCM) with Parallel Remediation enabled, the following rules apply:

* Parallel remediation only applies to ESXi hosts that are already in Maintenance Mode.

* vLCM does not put hosts into Maintenance Mode automatically in this mode.

* Similarly, it does not exit Maintenance Mode automatically after remediation.

* Hosts not in Maintenance Mode are skipped.

* If Parallel Remediation is activated, vLCM remediates only those hosts that are already in Maintenance Mode.

* Any hosts that are not in Maintenance Mode remain untouched.

* Remediation happens in parallel for all eligible hosts.

* In this case, two of the six hosts are in Maintenance Mode. Those two hosts will be remediated in parallel.

* The remaining four hosts (not in Maintenance Mode) will not be remediated at all.

Why the other options are incorrect:

* A. Four hosts not in maintenance mode are remediated in parallel##Incorrect. Hosts must already be in Maintenance Mode to be remediated.

* B. Hosts in maintenance mode first, then non-maintenance hosts##Incorrect. Non-maintenance mode hosts are skipped, not remediated after.

* C. Four hosts remediated sequentially, others skipped##Incorrect. Parallel Remediation does not touch non-maintenance mode hosts.

* D. Hosts in maintenance mode remediated in parallel; others skipped##Correct and matches VMware documentation.

References:

VMware vSphere 9.0 Documentation - Parallel Remediation for Lifecycle Manager Images VMware vSphere 9.0 Documentation -

Parallel remediation applies only to ESX hosts already in maintenance mode
