High-quality Fire-Inspector-II Valid Exam Tutorial - Pass Fire-Inspector-II Exam

With many advantages such as immediate download, simulation before the real test as well as high degree of privacy, our Fire-Inspector-II actual exam survives all the ordeals throughout its development and remains one of the best choices for those in preparation for exams. Many people have gained good grades after using our Fire-Inspector-II real test, so you will also enjoy the good results. Don't hesitate any more. Time and tide wait for no man. If you really long for recognition and success, you had better choose our Fire-Inspector-II exam demo since no other exam demo has better quality than our Fire-Inspector-II training questions.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q63-Q68):

NEW QUESTION # 63

A building under construction which has two stairways shall have a minimum of how many fire extinguishers per floor?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

Reference to Fire Extinguisher Requirements in Buildings Under Construction:

NFPA 241 (Standard for Safeguarding Construction, Alteration, and Demolition Operations) Section 13.6.1 and IFC 3309.1 require that:

A minimum of one fire extinguisher per floor is required.

Additional extinguishers are required based on stairwells and floor area.

If a building under construction has two stairways, a minimum of two fire extinguishers must be provided per floor to ensure adequate fire protection coverage.

Fire Safety Considerations for Construction Sites:

Construction sites pose a high fire risk due to temporary electrical systems, combustible materials, and lack of finished fire suppression systems.

Fire extinguishers must be readily available and evenly distributed near exit stairways and pathways for rapid access in case of an emergency.

Clarification of Incorrect Answer Choices:

A: 1 # Incorrect

One extinguisher is the minimum required for floors with only one exit/stairway, but a building with two stairways requires at least two extinguishers.

C: 3 # Incorrect

While more extinguishers can be added for larger areas or high-risk work zones, the minimum requirement remains two for two stairwells.

D: 4 # Incorrect

There is no general requirement for four extinguishers per floor unless dictated by floor size and hazard level.

Conclusion:

The correct and verified answer is B (2 fire extinguishers per floor) based on NFPA 241 and IFC 3309.1, ensuring compliance with fire safety standards for buildings under construction.

NEW QUESTION # 64

Pressure tests for organic coating process piping shall be conducted for a minimum of:

- A. 2 hours
- **B. 1 hour**
- C. 30 minutes
- D. 45 minutes

Answer: B

Explanation:

Pressure tests for organic coating process piping are required to ensure system integrity and prevent leaks, which could lead to fire or explosion hazards. The minimum required duration for these pressure tests is 1 hour.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 1504.6.3 (Pressure Testing for Organic Coating Process Piping) IFC 1504.6.3 mandates that all process piping associated with organic coating operations must undergo a pressure test for at least 1 hour. This ensures that the pipes can handle operational pressures without failure.
2. NFPA 33 - Standard for Spray Application Using Flammable or Combustible Materials (2021 Edition) NFPA 33, Section 14.2.6 confirms that process piping must be pressure-tested for no less than 1 hour to verify its safety and reliability.

Detailed Explanation of Answer Choices:

Option A (Incorrect): 30 minutes is insufficient for proper pressure testing.

Option B (Incorrect): 45 minutes is still below the 1-hour minimum requirement.

Option C (Correct): 1 hour is the correct minimum test duration as required by IFC 1504.6.3 and NFPA 33.

Option D (Incorrect): 2 hours is longer than required, but the minimum requirement is 1 hour.

Thus, the correct and verified answer is: C. 1 hour.

NEW QUESTION # 65

When adequate openings are provided on only one exterior wall of a story in an office building, an automatic sprinkler system shall be installed when the wall opposite the openings is more than ____ ft. away.

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

Reference to Automatic Sprinkler Requirements:

The International Fire Code (IFC 2021), Section 903.2.11.1 and NFPA 13 (Standard for Installation of Sprinkler Systems) regulate when sprinkler systems are required based on ventilation and fire spread potential.

A building with only one exterior wall providing openings creates a fire trap, increasing the need for automatic sprinklers.

Determining the Required Distance:

IFC 903.2.11.1 states that when the wall opposite the provided openings is more than 100 feet away, an automatic sprinkler system must be installed to ensure proper fire suppression.

Clarification of Incorrect Answer Choices:

A: 50 ft. # Incorrect

Sprinklers are not necessarily required at this distance because natural ventilation is still effective.

B: 75 ft. # Incorrect

This distance still allows some natural ventilation, making sprinklers optional rather than mandatory.

D: 150 ft. # Incorrect

Sprinklers are required once the distance exceeds 100 feet, so waiting until 150 feet would not meet code requirements.

Conclusion:

The correct and verified answer is C (100 feet) based on IFC 903.2.11.1 and NFPA 13, ensuring fire safety in office buildings with limited exterior openings.

NEW QUESTION # 66

Given: An inspection checklist serves as a reminder to the inspector of common items that need to be checked. Which of the following is often a problem with the use of inspection checklists?

- A. They are time-consuming to complete and file.
- B. They become a public record.
- C. They may serve as a basis for legal appeal against the code official's actions.
- **D. They may not address all of the code violations which may be encountered.**

Answer: D

Explanation:

Inspection checklists are valuable tools for fire inspectors, ensuring that key inspection points are consistently reviewed. However, one of their limitations is that they may not cover every potential code violation. This is due to the complexity and variability of fire

codes, as well as the uniqueness of each inspection scenario.

Reference to Fire Inspector Documentation:

1. 2021 IFC (International Fire Code) & ICC Fire Inspection Manual

The ICC Fire Inspection Manual (Chapter 4 - Fire Inspection Procedures) emphasizes that while checklists help streamline inspections, they should not be the sole reference. Inspectors must be prepared to identify violations beyond those listed.

2. NFPA 1031 - Standard for Professional Qualifications for Fire Inspector and Plan Examiner NFPA 1031 (Chapter 4: Fire Inspector I and II Roles & Responsibilities) states that inspectors must apply critical thinking and code knowledge rather than rely solely on pre-prepared lists.

3. 2021 Fire Inspector II Study Guide - ICC

This guide highlights that checklists are helpful but should be supplemented with a thorough knowledge of fire codes to ensure comprehensive inspections.

Detailed Explanation:

Option A (Incorrect): The fact that checklists become a public record is generally not a "problem" but rather a standard practice for transparency and accountability.

Option B (Incorrect): While checklists may take time to complete, this is a minor administrative issue rather than a fundamental problem with their use.

Option C (Correct): The main issue is that no checklist can comprehensively cover all possible violations, requiring inspectors to use judgment and knowledge.

Option D (Incorrect): Although legal appeals may occur, checklists themselves do not typically serve as the direct basis for such challenges.

Thus, the verified and correct answer is: C. They may not address all of the code violations which may be encountered.

NEW QUESTION # 67

The interior finish of walls and a ceiling in an atrium may not be less than ___ Class

- A. Class B - Less fire-resistant than Class A, not permitted for atriums.
- B. Class C - Provides even lower fire protection, making it unsuitable.
- C. Class D - Not recognized as an acceptable interior finish classification for atriums.
- **D. Class A - Interior Finish Ratings (Per ASTM E84 and NFPA 286).**

Answer: D

Explanation:

The interior finish requirements for walls and ceilings in an atrium are regulated under the 2021 International Building Code (IBC), Section 404 - Atriums, and Table 803.11 - Interior Wall and Ceiling Finish Requirements.

IBC Section 404.8 - Interior Finish in Atriums:

"The interior finish of walls and ceilings in an atrium shall be not less than Class A." Class A interior finishes have the highest level of fire resistance and low flame spread to minimize fire hazards in large open spaces like atriums.

NEW QUESTION # 68

.....

If you are working all the time, and you hardly find any time to prepare for the International Code Council Fire-Inspector-II exam, then DumpsQuestion present the smart way to International Code Council Fire-Inspector-II exam prep for the exam. You can always prepare for the Fire-Inspector-II test whenever you find free time with the help of our Fire-Inspector-II Pdf Dumps. We have curated all the Fire-Inspector-II questions and answers that you can view the exam International Code Council Fire-Inspector-II brain dumps and prepare for the Fire-Inspector-II exam. We guarantee that you will be able to pass the Fire-Inspector-II in the first attempt.

Exam Fire-Inspector-II Questions: <https://www.dumpsquestion.com/Fire-Inspector-II-exam-dumps-collection.html>

International Code Council Fire-Inspector-II Valid Exam Tutorial Now login to your Member's Area, and you can download your products from there, The International Code Council Fire-Inspector-II practice questions are easy to access and can be downloaded anytime on your mobile, laptop, or MacBook, Fire-Inspector-II exam guide will be the most professional and dedicated tutor you have ever met, you can download and use it with complete confidence, If you try to purchase and receive our Fire-Inspector-II torrent PDF, our high-quality dumps will bring you a good pass score.

We Our high quality DumpsQuestion Fire-Inspector-II troubleshooting will give you strong support and help you pass your certification. This is the only website that can provide you with all the materials related to the Fire-Inspector-II certification exam.

Desktop-Based Fire-Inspector-II Practice Exam Software - Mimics the Real International Code Council Exam Environment

Many people learn to program by trying Visual Fire-Inspector-II Basic, Now login to your Member's Area, and you can download your products from there, The International Code Council Fire-Inspector-II practice questions are easy to access and can be downloaded anytime on your mobile, laptop, or MacBook.

Fire-Inspector-II exam guide will be the most professional and dedicated tutor you have ever met, you can download and use it with complete confidence, If you try to purchase and receive our Fire-Inspector-II torrent PDF, our high-quality dumps will bring you a good pass score.

And our professional experts are the most specialized people in this career to help us pass the Fire-Inspector-II exam.
