## Valid Certification C\_CPI\_2506 Test Answers - Fantastic & 100% Pass-Rate C\_CPI\_2506 Materials Free Download for SAP C\_CPI\_2506 Exam

Every version of C\_CPI\_2506 study materials that we provide to you has its own advantage: the PDF version has no equipment limited, which can be read anywhere; the online version can use on any electronic equipment there is network available; the software version can simulate the Real C\_CPI\_2506 Exam environment to let you have more real feeling to C\_CPI\_2506 real exam, besides the software version can be available installed on unlimited number devices.

## SAP Certified Associate - Integration Developer Sample Questions (Q14-Q19):

### NEW QUESTION # 14

You use an outbound HTTP adapter with basic authentication .In SAP Integration Suite, Monitor Integrations Manage Security, where must you set up and store a user and password?

- A. Access policies
- B. Keystore
- C. Security Material
- D. PGP Keys

**Answer: C**

Explanation:

To use basic authentication for outbound HTTP connections, you must store the user and password as credentials in the security material of SAP Integration Suite. Credentials are a type of security artifact that can be used to authenticate against external systems. You can create and manage credentials in the Monitor Integrations Manage Security Security Material section of SAP Integration Suite. Reference: Setting Up Outbound HTTP Connections with Basic Authentication | SAP Help Portal, Security Artifact Renewal for HTTPS-Based Communication | SAP Help Portal

### NEW QUESTION # 15

From which of the following can you create an API proxy directly?Note: There are 2 correct answers to this question.

- A. S/4HANA API
- B. Open Connectors
- C. API provider
- D. Source URL

**Answer: C,D**

Explanation:

In SAP API Management (part of Integration Suite), an API Proxy acts as a facade for a backend service. You can create an API proxy directly from:

API Provider # An API provider represents the backend system (e.g., SAP S/4HANA, SAP Gateway, third- party services). Proxies can be generated from these providers.

Source URL # You can directly specify the backend system's endpoint URL, and an API proxy will be generated from it.

Other options:

Open Connectors # Provides harmonized APIs to third-party apps (e.g., Salesforce, HubSpot), but you don't create proxies directly from them.

S/4HANA API # While S/4HANA APIs can be exposed, they are typically accessed via an API Provider or URL, not directly listed as a creation source.

### NEW QUESTION # 16

What are some advantages of the cloud integration capability within SAP Integration Suite? Note: There are 2 correct answers to this question.

- A. Customer-to-Customer (C2C) integrations can be developed.
- **B. Predefined scenarios can be used out-of-the-box.**
- C. Integration processes can be developed offline.
- **D. A local installation is not required.**

**Answer: B,D**

Explanation:

Advantages of Cloud Integration capability in SAP Integration Suite:

Predefined scenarios # SAP delivers integration content packages (iFlows) that can be used directly.

No local installation # It runs as a cloud service, no on-premise setup required.

Other options:

Offline development is not supported (development happens in Web UI).

Customer-to-Customer (C2C) integrations are not a standard positioning; it's mainly B2B, B2G, and SAP-to-3rd-party scenarios.

So, correct advantages are out-of-the-box scenarios and no local installation required.

### NEW QUESTION # 17

Which combination of SAP BTP role collections allows a user to manage queues and topic subscriptions in SAP Event Mesh, and monitor its usage and resources?

- A. IntegrationAdmin and IntegrationDevelop
- B. ApplicationAdmin and ApplicationDevelop
- **C. EventMeshAdmin and EventMeshDevelop**
- D. SecurityAdmin and SecurityDevelop

**Answer: C**

Explanation:

In SAP BTP, SAP Event Mesh provides messaging capabilities (queues, topics, and subscriptions) that require specific role collections to enable developers and administrators to perform tasks. SAP delivers two dedicated role collections for Event Mesh:

EventMeshDeveloper:

Manages queues and topic subscriptions

Monitors Event Mesh and its queues

Performs testing of queues and message flows

EventMeshAdmin:

Includes all developer capabilities

Provides additional administration rights for lifecycle management of Event Mesh instances and configurations When a user is assigned these role collections, they gain the ability to:

Create and manage queues and topic subscriptions.

Monitor usage and resources such as queue depth, consumers, connections, and spool size within Event Mesh.

Other provided options are incorrect:

ApplicationAdmin/ApplicationDevelop # These are not SAP Event Mesh role collections, they do not provide queue or topic subscription access.

SecurityAdmin/SecurityDevelop # These roles are tied to security configurations and do not allow Event Mesh operations.

IntegrationAdmin/IntegrationDevelop # These roles belong to SAP Integration Suite (Cloud Integration) capability, not Event Mesh.

Therefore, the correct and verified answer according to SAP Integration Developer documentation is:

B). EventMeshAdmin and EventMeshDevelop

### NEW QUESTION # 18

You want to send messages over an SOAP adapter to an integration flow. Which method do you use to send the messages?

- A. PATCH
- B. UPDATE
- C. GET
- **D. POST**

**Answer: D**

Explanation:

When sending messages to an integration flow via SOAP adapter:

The request follows standard SOAP protocol semantics.

Messages are sent using HTTP POST, since SOAP messages are enclosed in an XML envelope carried in the HTTP request body.

GET, UPDATE, PATCH are not applicable for SOAP operations.

Thus, the correct method is POST.

### NEW QUESTION # 19
