Pass Fortinet FCP_FMG_AD-7.6 Exam | Latest FCP_FMG_AD-7.6 Dumps & Practice Exams - Cert007

a local FortiGuard Distribution Server (FDS) in a closed network. An administrator pushes a new firewall policy with an intrusion prevention system (IPS) profile from FortiManager to FortiGate HQ-NGFW-1. However, FortiGate does not recognize the new IPS signature from FortiManager.

What is the most likely reason why FortiGate HQ-NGFW-1 does not recognize the new IPS signature?

- A. FortiGate must enable rating for the FortiManager IP address, 192.168.1.120, in server list 1.
- B. FortiManager and FortiGate have different IPS database versions.
- C. The administrator must enable IPv6 connections for FortiGuard services on FortiManager.
- D. The administrator must enable the fortiguard-anycast option to correctly download all signatures from the local FDS.

Answer: B

Explanation:

The most likely reason FortiGate HQ-NGFW-1 does not recognize the new IPS signature is that FortiManager and FortiGate have different IPS database versions. The FortiManager may have pushed a signature update that FortiGate has not yet synchronized or validated locally, causing the signature to be unrecognized.

9. Which is recommended when you are managing a high volume of logs in your network?

- A. Store logs on FortiManager and use FortiView.
- B. Add and manage FortiAnalyzer from FortiManager.
- C. Enable advanced ADOM mode on FortiManager.
- D. Forward logs from FortiAnalyzer to FortiManager daily.

Answer: B

Explanation:

Adding and managing FortiAnalyzer from FortiManager is recommended for handling a high volume of logs, as FortiAnalyzer is designed specifically for centralized log management, analysis, and reporting, which offloads this workload from FortiManager.

We have authoritative production team made up by thousands of experts helping you get hang of our FCP - FortiManager 7.6 Administrator study question and enjoy the high quality study experience. We will update the content of FCP_FMG_AD-7.6 test guide from time to time according to recent changes of examination outline and current policies, so that every examiner can be well-focused and complete the exam focus in the shortest time. We will provide high quality assurance of FCP_FMG_AD-7.6 Exam Questions for our customers with dedication to ensure that we can develop a friendly and sustainable relationship.

Fortinet FCP_FMG_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Advanced Configuration: This section of the exam measures the skills of Network Security Engineers and includes knowledge of high availability (HA), FortiGuard service configuration, and global database ADOM settings. These advanced functions help strengthen system reliability and streamline management at a larger scale.
Topic 2	<ul style="list-style-type: none"> • Device Manager: This section of the exam measures the skills of Network Security Engineers and focuses on registering devices within ADOMs and handling device configurations. Candidates also learn how to install changes through scripts and diagnose issues using the revision history.

Topic 5	<ul style="list-style-type: none"> This section of the exam measures the skills of System Administrators and focuses on resolving problems at different levels of FortiManager. Candidates must troubleshoot deployment scenarios, imports, installations, and both device-level and ADOM-level issues, as well as identify and resolve system problems effectively.
Topic 6	<ul style="list-style-type: none"> Troubleshooting
Topic 7	<ul style="list-style-type: none"> Policy and Objects: This section of the exam measures the skills of System Administrators and evaluates their ability to manage policies and objects within FortiManager. It involves ADOM revisions, workspace mode, and policy imports and installations, emphasizing consistent policy control across networks.

Latest FCP_FMG_AD-7.6 Study Guide & Exam FCP_FMG_AD-7.6 Simulator Online

This kind of polished approach is beneficial for a commendable grade in the FCP - FortiManager 7.6 Administrator (FCP_FMG_AD-7.6) exam. While attempting the exam, take heed of the clock ticking, so that you manage the Fortinet FCP_FMG_AD-7.6 questions in a time-efficient way. Even if you are completely sure of the correct answer to a question, first eliminate the incorrect ones, so that you may prevent blunders due to human error.

Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q15-Q20):

NEW QUESTION # 15

An administrator receives the import report after importing policies into the policy package layer.

```
Start to import config from device(BR1-FGT-1) vdom(root) to adom(My_ADOM), package(BR1-FGT-1)
"firewall address",SKIPPED,"(name=all, oid=2490, DUPLICATE)"
"firewall policy",SUCCESS,"(name=1, oid=3632, new object)"
"firewall profile-protocol-options",SKIPPED,"(name=default, oid=3491, DUPLICATE)"
"firewall schedule recurring",SKIPPED,"(name=always, oid=3479, DUPLICATE)"
"firewall service category",SKIPPED,"(name=General, oid=2537, DUPLICATE)"
"firewall service custom",SKIPPED,"(name=ALL, oid=2547, DUPLICATE)"
"firewall ssh local-ca",SKIPPED,"(name=Fortinet_SSH_CA, oid=3488, reason=manually)"
"firewall ssh local-ca",SKIPPED,"(name=Fortinet_SSH_CA_Untrusted, oid=3489, reason=manually)"
"firewall ssl-ssh-profile",SKIPPED,"(name=no-inspection, oid=3585, DUPLICATE)"
```

Based on the import report, how did FortiManager handle the profile-protocol-options object named default?

- A. FortiManager created a new service category in its database.
- B. FortiManager deleted the duplicate value from its database.
- C. FortiManager did not update its database with the value.
- D. FortiManager updated the duplicate value in the FortiGate database.

Answer: C

Explanation:

The import report shows that the firewall profile-protocol-options object named default was SKIPPED due to being a DUPLICATE. This means FortiManager did not update its database with the imported object because an identical object already exists. FortiManager avoids importing duplicates to prevent redundancy and potential conflicts.

NEW QUESTION # 16

If one of the secondary FortiManager devices fails, which action must be performed to return the FortiManager HA manual mode to a working state?

- A. Manually promote one of the working secondary devices to the primary role.
- B. The FortiManager high availability (HA) state transition is transparent to administrators and does not require any

reconfiguration.

- C. Run a sanity check on the failed device to make sure HA heartbeat packets are using TCP port 5199.
- **D. Remove the peer IP of the failed device on the primary device.**

Answer: D

Explanation:

If a secondary fails, there is no change. Primary remains the same. Admin must remove the IP of the secondary. If you remove a secondary member from the HA configuration, the primary FortiManager removes the secondary serial number from the central management configuration of FortiGate, and updates the managed FortiGate devices immediately.

NEW QUESTION # 17

While attempting to push a NetFlow configuration script through the FortiManager policy package: an administrator encounters an error stating that an object is unrecognized in line 4.

```
Starting log (Run on database)
config vdom
edit AGEUSR
[line 4] > config sys interface [parameter(s) invalid. detail: object unrecognized]
Failed to commit to DB, reason([line 4] > config sys interface [parameter(s) invalid. detail: object unrecognized]
Running script(NetFlow_Configuration) on DB failed
```

What must the administrator do to successfully apply the NetFlow configuration script and avoid the object unrecognized error?

- A. Make sure the user running the script has full access to the VDOM--AGEUSR.
- **B. Use metadata variables if they use VDOMs in the script.**
- C. Run the script on the device database.
- D. Create a normalized interface on the policy layer before running the script.

Answer: B

Explanation:

When using scripts that reference VDOM-specific objects, such as interfaces, in FortiManager, metadata variables must be used to correctly map those objects per VDOM. This prevents "object unrecognized" errors during script execution.

NEW QUESTION # 18

An administrator configures a new BGP peer in the FortiManager device-level database of FortiGate. They reinstall the policy package to the managed FortiGate device without any errors.

However, when the administrator logs in to FortiGate, they do not see the BGP configuration changes. What is the most likely reason why FortiManager did not push the BGP peer changes to FortiGate?

- **A. The administrator must use the Install Wizard and select Install device settings only to push BGP settings**
- B. Fortigate has a BGP template assigned on the FortiManager database.
- C. The FortiGate firmware version is different from the FortiManager ADOM version.
- D. The administrator must run a sanity check on FortiManager to make sure the database is not corrupted.

Answer: A

Explanation:

If you change BGP in FortiManager and only reinstall the policy package, the change will NOT reach FortiGate because BGP is a device setting. You must install device settings.

NEW QUESTION # 19

An administrator has a FortiGate-HQ device with VDOMs--root, HR and Facilities, currently managed under the FortiManager ADOM--Site1. They try to move VDOM HR to the FortiManager ADOM-- Site2, but it does not work.

Why is the administrator not able to move FortiGate-HQ VDOM HR to FortiManager ADOM-- Site2?

- **A. The administrator must delete the FortiGate-HQ device from FortiManager and add it again using the Add Device wizard before moving the VDOM.**

- B. The FortiGate-HQ must be managed under the FortiManager ADOM--root to allow moving its VDOMs to different ADOMs.
- C. The administrator must have full access in the device layer of FortiGate-HQ VDOM-root before they can VDOMs to different ADOMs.
- D. FortiManager must be in ADOM normal mode, which does not allow VDOMs to be managed separately.

Answer: D

Explanation:

An ADOM can work in device modes: Normal, which is the default mode, and Advanced.

In Normal mode, you cannot assign different FortiGate virtual domains (VDOMs) to different FortiManager ADOMs.

In Advanced mode, you can assign different VDOMs from the same FortiGate device to different ADOMs. The system applies this setting globally to all ADOMs. This results in more complex management scenarios, and it is recommended for advanced users only.

NEW QUESTION # 20

.....

If you are busying with your work or study, and have little time for preparation of your exam, our FCP_FMG_AD-7.6 questions and answers will be your best choice. With experienced experts to compile and verify, FCP_FMG_AD-7.6 exam dumps contain most of the knowledge points for the exam, and you just need to spend about 48 to 72 hours on study, you can pass the exam just one time. In addition, you can try free demo before buying FCP_FMG_AD-7.6 Materials, so that you can have a better understanding of what you are going to buy. You can get downloading link and password within ten minutes after payment, so that you can start your learning right away.
