dbt Labs dbt Analytics Engineering Certification Exam Sample Questions (Q313-Q318):

NEW QUESTION # 313

Which of the following are essential elements of a well-structured pull request description?

- A. References to related issues in the project tracker, if applicable.
- B. Explanations of the reasoning behind major changes and implementation choices.
- C. Detailed logs of each Git command used during development.
- D. A concise title summarizing the overall changes.

Answer: A,B,D

Explanation:

A: Clear titles aid quick understanding of the PRs purpose. C: Explanations help reviewers and future developers understand the thought process behind the code. D: Issue references create traceability and context.

NEW QUESTION # 314

You want to add new columns to an existing model with a new version.

What will trigger warnings for removal of older model versions?

Choose 1 option.

- A. Provide a configuration for `deprecation_date`
- B. Create a new version of the model
- C. Include "deprecated" in the description of the model
- D. Configure the old model as `enabled: false`

Answer: A

Explanation:

dbt includes built-in support for model versioning and controlled deprecation. When you introduce a new version of a model, dbt will only warn about the old version being removed if the old version explicitly includes a `deprecation_date` configuration. This parameter signals to dbt that the model is scheduled for removal after a certain date, allowing dbt to produce structured warnings to users and downstream systems.

These warnings serve as a formal notice that the old version should no longer be referenced and will eventually be removed.

Option A, simply creating a new version, does not trigger warnings by itself. dbt allows multiple versions to coexist without any deprecation messaging unless you explicitly configure it. Option C (`enabled: false`) disables the model entirely, which is not a graceful deprecation strategy and does not result in version- removal warnings. Option D (adding "deprecated" in the description) is only informational text and has no functional effect on dbt's deprecation system.

Thus, only B-setting `deprecation_date` on the old version-activates dbt's official deprecation warning mechanism, making it the correct answer.

NEW QUESTION # 315

You run the command:

```
dbt test --select 'test_type:singular'
```

What will the command run?

Options shown:

- A. `macro_stg_tpch_orders_assert_pos_price`
`macro_stg_tpch_suppliers_assert_pos_acct_bal`
`stg_tpch_orders_assert_positive_price`
- B. `furniture_customers_test`
- C. `furniture_customers_test`

stg_tpch_orders_assert_positive_price

Choose 1 option.

- D. furniture_customers_test
macro_stg_tpch_orders_assert_pos_price
macro_stg_tpch_suppliers_assert_pos_acct_bal
stg_tpch_orders_assert_positive_price

Answer: A

Explanation:

In dbt, singular tests are custom SQL tests that live as standalone .sql files inside the root /tests directory, not inside /tests/generic. A singular test returns rows that indicate failure, and dbt runs the SQL directly as written. Generic tests, on the other hand, live inside the /tests/generic folder and are YAML-based macro- driven tests.

From your test folder structure (shown in the original screenshot), the following SQL files exist:

Inside /tests/generic/

* furniture_customers_test.sql This file is a generic test, not singular.

Inside the root /tests directory:

* macro_stg_tpch_orders_assert_pos_price.sql

* macro_stg_tpch_suppliers_assert_pos_acct_bal.sql

* stg_tpch_orders_assert_positive_price.sql

These are singular tests, because they are standalone SQL files in the tests root folder.

When you run:

dbt test --select 'test_type:singular'

dbt filters for only tests classified as singular. It ignores generic tests entirely.

Therefore, only the following 3 tests will run:

* macro_stg_tpch_orders_assert_pos_price

* macro_stg_tpch_suppliers_assert_pos_acct_bal

* stg_tpch_orders_assert_positive_price

This matches Option C, making it the correct answer.

NEW QUESTION # 316

A colleague asks, "Why go through the trouble of using dbt? Can't we just write SQL scripts and schedule them?" Which of the following is the most compelling argument for using dbt?

- A. dbt models are typically more performant than hand-written SQL scripts.
- **B. dbt promotes modularity, reusable code, and testing within data transformation pipelines.**
- C. dbt automatically generates user-friendly data lineage visualizations.
- D. dbt offers native support for advanced scheduling and orchestration features.

Answer: B

Explanation:

While other options have benefits, dbt's core strength lies in enforcing structure and maintainability in data transformation processes.

NEW QUESTION # 317

When merging code on a remote repository hosting platform (like GitHub), you notice options like "squash and merge" and "rebase and merge." Which factors would influence your choice between these options?

- A. Whether you want to preserve the feature branch commit history in detail.
- B. The size and complexity of the changes within the pull request.
- **C. All of the above.**
- D. Your team's established conventions and preferences for maintaining the project history.

Answer: C

Explanation:

A: Squash and merge simplifies history; rebase and merge preserve details. B: Large pull requests might benefit from squashing for a cleaner main branch view. C: Teams should have consistent ways to manage history for ease of collaboration.
