

ISACA CRISC Examinations Actual Questions - Realistic Certified in Risk and Information Systems Control Examinations Actual Questions Pass Guaranteed Quiz

P.S. Free & New CRISC dumps are available on Google Drive shared by Prep4cram: https://drive.google.com/open?id=1N9pP9fdMdpoA5AkgANN1_R8TI0LhMKqW

Our CRISC study materials will be very useful for all people to improve their learning efficiency. If you do all things with efficient, you will have a promotion easily. If you want to spend less time on preparing for your CRISC exam, if you want to pass your CRISC exam and get the certification in a short time, our CRISC Study Materials will be your best choice to help you achieve your dream. Only studying with our CRISC exam questions for 20 to 30 hours, you will be able to pass the CRISC exam with confidence.

You do not worry about that you get false information of CRISC guide materials. According to personal preference and budget choice, choosing the right goods to join the shopping cart. The 3 formats of CRISC study materials are PDF, Software/PC, and APP/Online. Each format has distinct strength and shortcomings. We have printable PDF format prepared by experts that you can study our CRISC training engine anywhere and anytime as long as you have access to download. We also have installable software application which is equipped with CRISC simulated real exam environment.

New CRISC Exam Testking | CRISC Best Practice

There are three different versions of our CRISC exam questions to meet customers' needs you can choose the version that is suitable for you to study. If you buy our CRISC test torrent, you will have the opportunity to make good use of your scattered time to learn. If you choose our CRISC study torrent, you can make the most of your free time. So using our CRISC Exam Prep will help customers make good use of their fragmentation time to study and improve their efficiency of learning. It will be easier for you to pass your CRISC exam and get your certification in a short time.

Potential Candidates

The candidates for this certification are the professionals with ample experience in the management of IT risks. It is also aimed at the

individuals with the relevant skills and competence in designing, implementing, monitoring, and maintaining information security controls.

ISACA Certified in Risk and Information Systems Control Sample Questions (Q1024-Q1029):

NEW QUESTION # 1024

Which of the following is the GREATEST concern if user acceptance testing (UAT) is not conducted when implementing a new application?

- A. Increase in the use of redundant processes
- B. The probability of application defects will increase
- C. Data confidentiality could be compromised
- D. The application could fail to meet defined business requirements

Answer: D

Explanation:

User acceptance testing (UAT) is a type of validation testing that ensures that the product meets the needs and expectations of the end users and the business stakeholders. UAT is usually conducted by the actual or representative users of the product, who perform various scenarios and tasks to verify that the product functions correctly and satisfies the business requirements. UAT is an important step in the software development life cycle, as it helps to identify and resolve any issues or gaps between the product and the requirements before the product is released.

If UAT is not conducted when implementing a new application, the greatest concern is that the application could fail to meet the defined business requirements, which could result in user dissatisfaction, loss of trust, reduced productivity, increased costs, and missed opportunities. The application may have technical defects, security vulnerabilities, or redundant processes, but these are not the primary purpose of UAT. UAT is focused on validating the business value and usability of the product, not the technical quality or security of the product. Therefore, the lack of UAT could have a significant impact on the alignment of the product with the business objectives and user needs.

NEW QUESTION # 1025

Which of the following is the MOST important component of effective security incident response?

- A. A documented communications plan
- B. Network time protocol synchronization
- C. Identification of attack sources
- D. Early detection of breaches

Answer: D

NEW QUESTION # 1026

Which of the following is the MOST important objective of regularly presenting the project risk register to the project steering committee?

- A. To determine if new risk scenarios have been identified
- B. To ensure the project timeline is on target
- C. To allocate budget for resolution of risk issues
- D. To track the status of risk mitigation actions

Answer: D

Explanation:

* Project risk register: A document that records the identified risks, their likelihood, impact, and mitigation strategies for a project1.

* Project steering committee: A group of senior stakeholders and experts who oversee and support a project from a higher level2.

* Risk mitigation actions: The measures taken to prevent, reduce, or transfer the risks that may affect a project3.

The most important objective of regularly presenting the project risk register to the project steering committee is to track the status of risk mitigation actions. Tracking the status of risk mitigation actions can help the project steering committee to:

- * Monitor and measure the performance and effectiveness of the risk management process and controls
- * Evaluate the progress and outcomes of the risk mitigation actions against the project goals and objectives
- * Identify and resolve any issues, challenges, or gaps in the risk mitigation actions
- * Provide guidance, feedback, and support to the project manager and the project team
- * Adjust or revise the risk mitigation actions as needed to reflect the changes in the project scope, schedule, budget, or environment

The other options are not the most important objective of regularly presenting the project risk register to the project steering committee, although they may be relevant or beneficial. Allocating budget for resolution of risk issues, which means assigning financial resources to address and resolve the risks that may affect a project, may be a part of the risk management process, but it is not the primary purpose of presenting the project risk register, which is more focused on tracking and reporting the risk status and actions. Determining if new risk scenarios have been identified, which means finding out if there are any additional or emerging risks that may impact a project, may be a useful outcome of presenting the project risk register, but it is not the main objective, which is more concerned with tracking and reporting the existing risk status and actions.

Ensuring the project timeline is on target, which means verifying that the project is progressing according to the planned schedule and milestones, may be a benefit of presenting the project risk register, but it is not the key objective, which is more related to tracking and reporting the risk status and actions.

NEW QUESTION # 1027

An organization has provided legal text explaining the rights and expected behavior of users accessing a system from geographic locations that have strong privacy regulations. Which of the following control types has been applied?

- A. Compensating
- **B. Directive**
- C. Preventive
- D. Detective

Answer: B

Explanation:

The type of control that has been applied when an organization provides legal text explaining the rights and expected behavior of users accessing a system from geographic locations that have strong privacy regulations is directive. A directive control is a control that guides or instructs the users or the staff on the policies, procedures, or standards that they need to follow or comply with when performing their tasks or activities. A directive control can help to prevent or reduce the risk of non-compliance, errors, or violations, by ensuring that the users or the staff are aware and informed of the expectations and requirements of the organization or the system. A directive control can also help to enforce the accountability and responsibility of the users or the staff, and to support the audit and monitoring of their actions and behaviors. Providing legal text explaining the rights and expected behavior of users accessing a system from geographic locations that have strong privacy regulations is an example of a directive control, as it informs the users of the legal obligations and consequences of using the system, and instructs them on how to protect their privacy and the privacy of others.

Detective, preventive, and compensating are not the correct types of control, as they do not match the definition or the purpose of the control that has been applied. References = CRISC Review Manual, 6th Edition, ISACA, 2015, page 217.

NEW QUESTION # 1028

Which of The following is the BEST way to confirm whether appropriate automated controls are in place within a recently implemented system?

- A. Conduct user acceptance testing.
- B. Interview process owners.
- C. Perform a post-implementation review.
- **D. Review the key performance indicators (KPIs).**

Answer: D

NEW QUESTION # 1029

.....

It is of no exaggeration to say that sometimes CRISC certification is exactly a stepping-stone to success, especially when you are hunting for a job. The CRISC study materials are of great help in this sense. With the CRISC test training, you can both have the confidence and gumption to ask for better treatment. To earn such a material, you can spend some time to study our CRISC study torrent. No study can be done successfully without a specific goal and a powerful drive, and here to earn a better living by getting promotion is a good one.
