Microsoft GH-200 시험을 보시는 분이 점점 많아지고 있는데 하루빨리 다른 분들보다 Microsoft GH-200시험을 패스하여 자격증을 취득하는 편이 좋지 않을까요? 자격증이 보편화되면 자격증의 가치도 그만큼 떨어지니깐요.

Microsoft GH-200덤프는 이미 많은분들의 시험패스로 검증된 믿을만한 최고의 시험자료입니다.

Microsoft GH-200 시험요강:

주제	소개
주제 1	Author and Maintain Workflows: This section of the exam measures skills of DevOps Engineers and Automation Specialists and covers building and managing workflows triggered by events such as pushes, scheduled times, manual triggers, and webhooks. It includes understanding workflow components like jobs, steps, actions, and runners, syntax correctness, environment variables, secrets management, and dependencies between jobs. Candidates will also demonstrate practical abilities to create workflows for various purposes, including publishing packages, using service containers, routing jobs, and deploying releases to cloud providers.

주제 2	• Author and Maintain Actions: This domain evaluates the abilities of Action Developers and Automation Engineers to select and create suitable types of GitHub Actions, such as JavaScript, Docker containers, or run steps. It emphasizes troubleshooting action code, understanding the components and file structures of actions, and using workflow commands within actions to communicate with runners, including exit code management.
주제 3	• Consume Workflows: This domain targets Software Developers and Quality Assurance Engineers and focuses on interpreting workflow runs and their outcomes. It covers identifying triggering events, reading workflow configurations, troubleshooting failures by analyzing logs, enabling debug logging, managing environment variables, caching dependencies, and passing data between jobs. Candidates also manage workflow runs, artifacts, approvals, and status badges, as well as locating workflows within repositories and leveraging organizational templated workflows.
주제 4	• Manage GitHub Actions in the Enterprise: This section measures the expertise of Enterprise Administrators and Platform Engineers in distributing and managing GitHub Actions and workflows at the organizational level. It includes reuse and sharing of templates, strategies for managing reusable components via repositories and naming conventions, controlling access to actions, setting organization-wide usage policies, and planning maintenance to ensure efficient enterprise-wide deployment of GitHub Actions.

GH-200최신 시험 공부자료 - GH-200완벽한 덤프공부자료

만약 아직도Microsoft GH-200인증시험 위하여 많은 시간과 정력을 소모하며 열심히 공부하고 있습니까? 아직도 어떻게하면Microsoft GH-200인증시험을 빠르게 취득할 수 있는 방법을 못하고 계십니까? 지금ExamPassdump에서 Microsoft GH-200인증시험을 안전하게 넘을 수 있도록 대책을 내드리겠습니다. 아주 신기한 효과가 있을 것입니다.

최신 GitHub Administrator GH-200 무료샘플문제 (Q91-Q96):

질문 # 91

Which of the following scenarios requires a developer to explicitly use the GITHUB_TOKEN or github.token secret within a workflow? (Choose two.)

- A. making an authenticated GitHub API request
- B. checking out source code with the actions/checkout@v3 action
- C. passing the GITHUB_TOKEN secret to an action that requires a token as an input
- D. assigning non-default permissions to the GITHUB_TOKEN

정답: A,C

설명:

Some actions may require a GITHUB_TOKEN as an input to authenticate and perform specific tasks, such as creating issues, commenting on pull requests, or interacting with the GitHub API. In such cases, you would need to explicitly pass the token to the action.

When making an authenticated GitHub API request, the GITHUB_TOKEN is required to authenticate the request. This token is automatically provided by GitHub in the workflow, and it must be explicitly used when interacting with the GitHub API.

질문 # 92

Which syntax correctly accesses a job output (output1) of an upstream job (job1) from a dependent job within a workflow?

- A. \${{depends.job1.output1}}
- B. \${{needs.job1.output1}}
- C. \${{job1.outputs.output1}}
- D. \${{needs.job1.outputs.output1}}

정답: D

설명:

The needs context is used to reference the outputs of jobs that are dependencies of the current job. In this case, needs.job1.outputs.output1 correctly accesses the output of output1 from the job job1 in the dependent job.

질문 # 93

As a developer, you need to make sure that only actions from trusted sources are available for use in your GitHub Enterprise Cloud organization. Which of the following statements are true?

(Each correct answer presents a complete solution. Choose three.)

- A. GitHub-verified actions can be collectively enabled for use in the enterprise.
- B. Actions can be restricted to only those available in the enterprise.
- C. Actions created by GitHub are automatically enabled and cannot be disabled.
- D. Individual third-party actions enabled with a specific tag will prevent updated versions of the action from introducing vulnerabilities.
- E. Specific actions can individually be enabled for the organization, including version information.
- F. Actions can be published to an internal marketplace.

정답: A,E,F

설명:

[A] Internal Actions Marketplace

The reason for having an internal actions marketplace is to have a central location for all the actions that can be used inside our production organization. This is to prevent any actions from the public marketplace from being used in our production organization, without being checked for security risks first.

[B] Allow Marketplace actions by verified creators: You can allow all GitHub Marketplace actions created by verified creators to be used by workflows. When GitHub has verified the creator of the action as a partner organization, the badge is displayed next to the action in GitHub Marketplace.

[C] You can enable specific actions for the organization by identifying them and providing version control, ensuring only trusted versions are used in workflows.

<https://docs.github.com/en/enterprise-cloud@latest/organizations/managing-organization-settings/disabling-or-limiting-github-actions-for-your-organization>

질문 # 94

Which default environment variable specifies the branch or tag that triggered a workflow?

- A. GITHUB_REF
- B. GITHUB_TAG
- C. GITHUB_BRANCH
- D. ENV_BRANCH

정답: A

설명:

GITHUB_REF : The branch or tag ref that triggered the workflow.

Reference:

<https://graphite.dev/guides/github-actions-variables>

질문 # 95

Which action type should be used to bundle a series of run steps into a reusable custom action?

- A. Composite action
- B. JavaScript action
- C. Bash script action
- D. Docker container action

정답: A

설명:

Reusable workflows versus composite actions

Reusable workflows and composite actions both help you avoid duplicating workflow content.

Whereas reusable workflows allow you to reuse an entire workflow, with multiple jobs and steps, composite actions combine multiple steps that you can then run within a job step, just like any other action.

A composite action allows you to bundle multiple steps into a single reusable action within a workflow. It is composed of multiple run steps or other actions and can be reused across workflows, making it the perfect choice for bundling a series of steps.
