Test 220-1101 Dumps Pdf & 220-1101 Free Braindumps
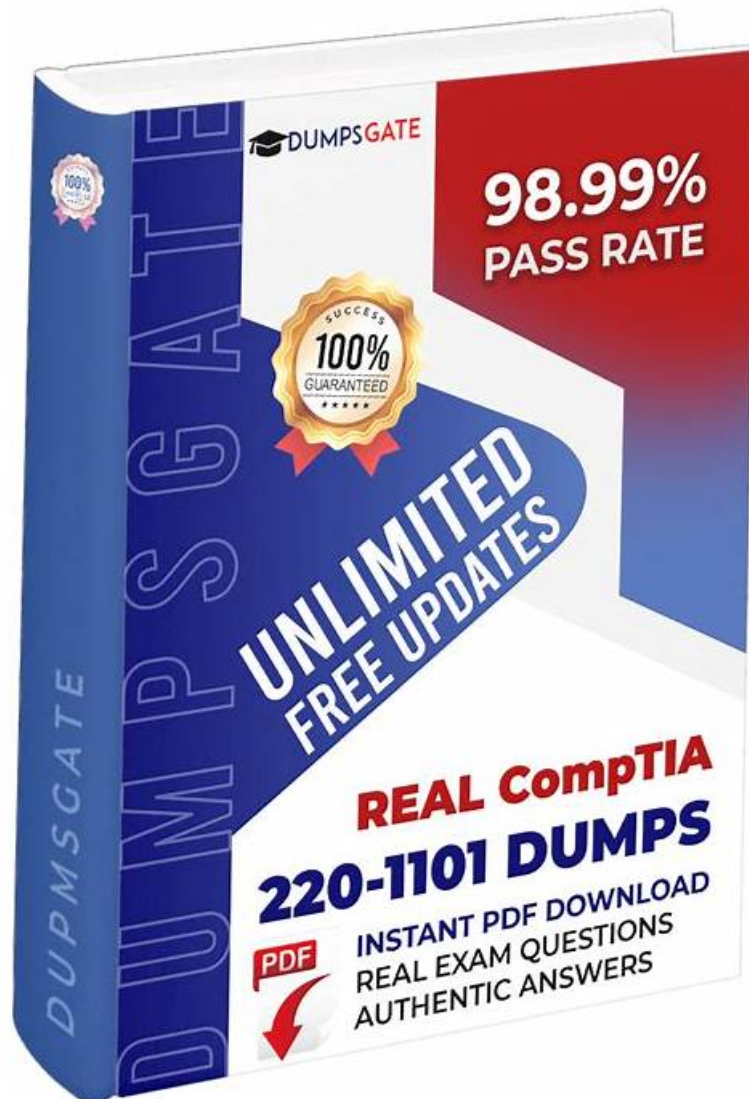

We provide 3 versions for the client to choose and free update. Different version boosts different advantage and please read the introduction of each version carefully before your purchase. The language of our 220-1101 study materials are easy to be understood and we compile the 220-1101 Exam Torrent according to the latest development situation in the theory and the practice. You only need little time to prepare for our exam. So it is worthy for you to buy our 220-1101 questions torrent.

The Core 1 exam covers topics such as mobile devices, networking technology, hardware, virtualization and cloud computing, and troubleshooting. 220-1101 Exam consists of 90 multiple-choice questions and is timed at 90 minutes. To pass the exam, an individual must score a minimum of 675 on a scale of 100-900.

Take Your CompTIA 220-1101 Exam Prepare on the Go with PDF Format

As long as you need the exam, we can update the CompTIA certification 220-1101 exam training materials to meet your examination needs. Dumpkiller's training materials contain many practice questions and answers about CompTIA 220-1101 and they can 100% ensure you pass CompTIA 220-1101 exam. With the training materials we provide, you can take a better

preparation for the exam. And we will also provide you a year free update service.

CompTIA 220-1101, also known as the CompTIA A+ Certification Exam: Core 1, is a certification exam that focuses on foundational knowledge of computer hardware, software, and networking. It is designed to validate the skills and knowledge of entry-level IT professionals and provide them with a solid foundation for a career in the IT industry.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q109-Q114):

NEW QUESTION # 109
A technician is setting up a new laptop for a user who wants to be able to quickly pack up the laptop and leave if needed. The user has the following accessories:
* USB badge reader
* USB badge printer
* USB signature pad
* 3.5mm headset
* HDMI external monitor
* Mouse
Which of the following is the best way to meet the user's requirement?

- A. Provide the user with a second laptop.
- B. Directly connect all accessories to the laptop.
- C. Connect everything to a compatible docking station.
- D. Provide the user with a USB hub.

Answer: C

Explanation:
The best way to meet the user's requirement is C. Connect everything to a compatible docking station.
A docking station is a device that allows a laptop to connect to multiple peripherals and accessories with a single connection. A docking station usually has ports for USB, HDMI, audio, Ethernet, and power, as well as slots for expansion cards. A docking station can enhance the functionality and convenience of a laptop by providing a desktop-like experience1. A compatible docking station is one that matches the laptop's model, brand, and connector type2.
A port replicator is a simpler device that only replicates the ports of the laptop, such as USB and HDMI, without providing additional features or power. A port replicator can also allow a laptop to connect to multiple peripherals and accessories with a single connection, but it does not offer the same benefits as a docking station1.
Directly connecting all accessories to the laptop would not meet the user's requirement, as it would be cumbersome and time-consuming to pack up and leave if needed. The user would have to disconnect and reconnect multiple cables every time they want to use or move the laptop. This option would also limit the number of accessories that can be connected, as the laptop may not have enough ports for all of them.
Providing the user with a second laptop would not meet the user's requirement, as it would be expensive and impractical. The user would have to transfer data and settings between the two laptops, and keep them both updated and secure. This option would also create confusion and redundancy, as the user would have two identical devices.
Providing the user with a USB hub would not meet the user's requirement, as it would only allow the user to connect more USB devices to the laptop. A USB hub is a device that splits one USB port into multiple ports, but it does not support other types of connections, such as HDMI or audio. A USB hub would also require an external power source or drain the laptop's battery faster. This option would not help the user connect the HDMI external monitor or the 3.5mm headset.

NEW QUESTION # 110
A technician is troubleshooting internet connectivity issues after a firewall update. Users report that they can access local network resources, such as printers and shares, but cannot access the internet. Which of the following settings is most likely causing the issue?

- A. Default gateway
- B. Static IP assignments
- C. Subnet mask
- D. VLANs

Answer: A

Explanation:
Comprehensive and Detailed In-Depth Explanation:

If users can access local network resources but not the internet, the most likely culprit is a misconfigured or missing default gateway. The default gateway routes traffic from the local network to external networks (i.

e., the internet). If it's not properly set or was altered during a firewall update, internet traffic won't be forwarded correctly.

* Option A: Static IPs could cause conflict, but wouldn't affect only external access if configured correctly.

* Option C: An incorrect subnet mask could isolate devices, but local communication would likely be impacted too.

* Option D: VLANs segment networks; while misconfigured VLANs could cause access issues, they'd more likely isolate local traffic as well.

CompTIA A+ Core 1 Exam Objective Reference:

* Objective 2.6: Given a scenario, configure and troubleshoot network connectivity.

NEW QUESTION # 111

A technician is replacing a computer with a connected point-of-sale system using a 9-pin serial adapter. The new computer does not have a 9-pin serial port.

Which of the following ports can an adapter be installed on in order to connect to the point-of-sale system?

- A. HDMI
- B. Bluetooth
- C. USB
- D. Lightning

Answer: C

Explanation:

A USB to 9-pin serial adapter can be used to connect the new computer to the point-of-sale system using a USB port. USB is a common and versatile port type found on most computers. If a technician is replacing a computer with a connected point-of-sale system using a 9-pin serial adapter and the new computer does not have a 9-pin serial port, an adapter can be installed on the USB port in order to connect to the point-of-sale system. A USB-to-serial adapter can be used to connect a serial device to a USB port on a computer.

NEW QUESTION # 112

A company wants to use client-side visualization for application testing. Which of the following configurations would BEST support this goal?

- A.

CPU 2.5GHz - 2 cores
16GB DDR4 RAM
4x 1TB HDD RAID 5
CompTIA

- B.

CPU 2.5GHz - 4 cores
16GB DDR4 RAM
1TB SSD
CompTIA

- C.

CPU 3.2GHz - 1 core
16GB DDR4 RAM
4TB SSD

- D.

CPU 3.2GHz - 4 cores
8GB DDR4 RAM
500GB HDD

Answer: B

NEW QUESTION # 113

A technician is upgrading the memory on a server that processes payment information online. Which of the following types of memory would the technician most likely install?

- A. DDR4
- B. ECC
- C. SODIMM
- D. VRAM

Answer: B

Explanation:
ECC stands for Error Correction Code, which is a type of memory that can detect and correct data errors that may occur during processing or transmission. ECC memory is commonly used in servers that handle sensitive or critical information, such as payment information online, because it can reduce the risk of data corruption, system crashes, or security breaches12.
DDR4 is a generation of DDR technology, which stands for Double Data Rate. DDR4 memory is faster and more power-efficient than its predecessors, but it does not necessarily have ECC functionality. DDR4 memory can be either ECC or non-ECC1.
VRAM is Video RAM, which is a type of memory that is dedicated to storing graphics data for display. VRAM is usually found on graphics cards or integrated graphics processors, not on servers3.
SODIMM is Small Outline DIMM, which is a type of memory module that has a smaller size and lower profile than regular DIMMs. SODIMMs are typically used in laptops, notebooks, or other compact devices, not on servers3.
