You may think choosing practice at the first time is a little bit like taking gambles. However, you can be assured by our CDCS learning quiz with free demos to take reference, and professional elites as your backup. Accuracy rate is unbelievably high and helped over 98 percent of exam candidates pass the exam. By imparting the knowledge of the CDCS Exam to those ardent exam candidates who are eager to succeed like you, they treat it as responsibility to offer help. So please prepare to get striking progress if you can get our CDCS study guide with following traits for your information

As is known to us, a good product is not only reflected in the strict management system, complete quality guarantee system but also the fine pre-sale and after-sale service system. In order to provide the best CDCS test training guide for all people, our company already established the integrate quality manage system, before sell serve and promise after sale. If you buy the CDCS Exam Dumps from our company, we can make sure that you will have the right to enjoy the 24 hours full-time online service. In order to help the

customers solve the problem at any moment, our server staff will be online all the time.

CDCS Valid Dump | CDCS Free Exam Questions

If you are preparing for an exam, it may spend lots of time, but don't worry, if you are preparing for the CDCS exam, the product of our company will help you save your time. The product of our company will list the major key points of the CDCS exam, and you can grasp the knowledge points as quickly as possible, therefore the time is saving. Besides, the product for CDCS Exam also provide specific training materials for the exam. And the PDF version is convenient to read, and support printing, while the software version stimulate the real environment of the CDCS exam. The APP online version is also available of the product, you can learn at any time and at any place. Choosing our product, it will help you.

EXIN EPI Certified Data Centre Specialist Sample Questions (Q10-Q15):

NEW QUESTION # 10

A data center scores Rated-3 in mechanical, Rated-4 in electrical, and Rated-2 in architectural. What is the overall Rating of this data center when the Rating is based on the ANSI/TIA-942?

- A. Rated-4 since that is the highest rating received
- B. Rated-4 since electrical is more important than mechanical and architectural
- C. Depends on the Rating scored in telecommunications
- D. Rated-2 since that is the lowest rating received

Answer: D

Explanation:

According to ANSI/TIA-942 standards, the overall data center rating is determined by the lowest rating among all evaluated categories. Therefore, if a data center is rated 2 in architectural, despite being rated higher in mechanical and electrical, the overall rating is Rated-2. This approach ensures that all aspects meet a minimum standard and prevents a higher rating if any critical area does not comply.

Detailed Explanation:

ANSI/TIA-942 evaluates data centers across several areas, including mechanical, electrical, architectural, and telecommunications. The overall rating reflects the lowest rated category, ensuring that no aspect of the data center's design or operation falls below the specified level. Thus, in this case, the architectural rating of 2 dictates the final rating, ensuring a comprehensive and balanced assessment of reliability and resilience across all aspects.

EPI Data Center Specialist References:

EPI Data Center Specialist training aligns with ANSI/TIA-942, stating that the final rating must reflect the lowest score to ensure comprehensive reliability across all critical infrastructure categories. This avoids overstating the data center's resilience and ensures uniform standards across areas.

NEW QUESTION # 11

You are allowed to use a calculator for this question. A battery bank is rated at a total capacity of 600 Ah. Calculate how much charging current the rectifier should be able to supply as charging current.

- A. 80 Amperes
- B. 60 Amperes
- C. 12 Amperes
- D. 30 Amperes

Answer: D

Explanation:

To determine the charging current for a battery bank, a general rule of thumb is that the charging current should be 5% of the total battery capacity. For a battery rated at 600 Ah, this calculation would be:

$600 \text{ Ah} \times 0.05 = 30 \text{ Amperes}$ This ensures the battery is charged efficiently without overloading the rectifier or risking battery damage.

Detailed Explanation:

Battery charging current is typically set as a percentage of the battery's capacity to balance effective charging with longevity and

safety. A 5% charging rate is standard for lead-acid batteries, which would be 30 Amperes for a 600 Ah battery bank.

EPI Data Center Specialist References:

EPI standards recommend calculating charging currents based on a percentage of the battery capacity to ensure safety and efficiency, aligning with best practices for battery management in data centers.

NEW QUESTION # 12

Management has requested a 15-minute battery bank assuming full load on the UPS. The UPS vendor has provided the following specifications of the UPS:

*Rated power: 30 kVA

*Rectifier input voltage: 400 V/3 phase

*Rectifier input power factor: 0.8

*Battery rated voltage: 384 V

*Number of cells: 192

*End of discharge voltage: 308 V

*Inverter output voltage: 400 V/3 phase

*Inverter output power factor: 0.8

What information is missing to perform the battery calculation?

- A. Load imbalance on the phases
- B. Inverter efficiency
- C. Available battery charging current
- D. UPS efficiency

Answer: D

Explanation:

To determine the required capacity of the battery bank for the 15-minute runtime at full load, one must know the total power requirement that the battery bank must supply. The specifications provided include most of the necessary details, such as rated power, input voltage, battery voltage, and discharge voltage. However, one critical piece of information is missing: the UPS efficiency.

Detailed Explanation:

In a data center UPS system, the battery bank is designed to supply power for a set duration when there is an input power failure. The UPS efficiency affects the actual power the UPS can deliver to the load compared to the power it draws from the batteries. The efficiency factor is necessary to accurately calculate the required capacity of the battery bank since it determines how much input power is needed from the batteries to supply the load at full capacity. The formula typically used to determine battery capacity involves factoring in UPS efficiency, as it allows you to understand the losses within the UPS system.

If UPS efficiency is not considered, there would be an inaccurate estimation of the actual power needed from the batteries. For instance, if a UPS has 90% efficiency, only 90% of the power drawn from the batteries reaches the load. Without knowing this efficiency, it is not possible to calculate the battery bank size accurately, as you cannot accurately estimate the losses within the UPS itself.

EPI Data Center Specialist References:

According to EPI Data Center Specialist training, understanding the UPS efficiency is essential for battery sizing. Without it, the calculations could lead to either undersizing or oversizing the battery bank, which affects both reliability and cost-effectiveness of the UPS system. The EPI Data Center Specialist course emphasizes that battery sizing must account for all losses within the UPS system, with efficiency being a primary factor in these calculations.

NEW QUESTION # 13

The temperature in the computer room is increased from 18 °C (64 °F) to 27 °C (81 °F). What is the impact on the amount of gas required to suppress a fire assuming a halocarbon agent?

- A. The amount of gas required will be higher
- B. The amount of gas required will not change
- C. The change cannot be determined without knowing the change in humidity as well
- D. The amount of gas required will be less

Answer: A

Explanation:

Design concentrations for halocarbons (e.g., FM-200/HFC-227ea, Novec 1230) increase with ambient temperature; higher

temperature # higher minimum extinguishing concentration # more agent mass.

References: NFPA 2001 (Clean Agent Fire Extinguishing Systems) §5.4 & Annex A (temperature correction for halocarbons); ISO 14520-1 §5.4.

NEW QUESTION # 14

In which stage of the data center life cycle does testing and commissioning take place?

- A. Retire stage
- B. Operate/optimize stage
- **C. Implement stage**
- D. Design stage

Answer: C

Explanation:

The data center life cycle is typically divided into four stages:

* Design (scope, architecture, planning)

* Implement (construction, installation, testing & commissioning)

* Operate/Optimize (day-to-day operations, maintenance, continuous improvement)

* Retire (decommissioning and migration)

Testing and commissioning occur in the Implement stage, after construction but before handover. This includes Integrated Systems Testing (IST), which validates that all systems (electrical, cooling, fire protection, telecom) perform to design intent and redundancy requirements.

Without commissioning, the data center cannot be certified or considered operational.
