NEW QUESTION 43

A developer created a weather app that contains multiple Lightning web components. One of the components, called Toggle, has a toggle for Fahrenheit or Celsius units. Another component, called Temperature, displays the current temperature in the unit selected in the Toggle component. When a user toggles from Fahrenheit to Celsius or vice versa in the Toggle component, the information must be sent to the Temperature component so the temperature can be converted and displayed.

What is the recommend way to accomplish this?

- A. The Toggle component should call a method in the Temperature component.
- B. Use Lightning Message Service to communicate between the components.
- C. Create a custom event to handle the communicate between the components.
- D. Use Lightning Message Service to communicate between the component.

Answer: C

NEW QUESTION 44

A developer created a Visualforce page and custom controller to display the account type field as shown below. Custom controller code: `public class customCtrlr { private Account theAccount; public String actType; public customCtrlr() { theAccount = [SELECT Id, Type FROM Account WHERE Id = :apexPages.currentPage().getParameters().get('id')]; actType = theAccount.Type; } }` Visualforce page snippet:

The Account Type is {!actType} The value of the account type field is not being displayed correctly on the page. Assuming the custom controller is property referenced on the Visualforce page, what should the developer do to correct the problem?

- A. Add with sharing to the custom controller.
- B. Change theAccount attribute to public.
- C. Convert theAccount.Type to a String.
- D. Add a getter method for the actType attribute.

Quiz Reliable PDI - Latest Platform Developer I (PDI) Exam Questions Vce

Nowadays, we live so busy every day. Especially for some businessmen who want to pass the PDI exam and get related certification, time is vital importance for them, they may don't have enough time to prepare for their exam. Some of them may give it up. After so many years' development, our PDI exam torrent is absolutely the most excellent than other competitors, the content of it is more complete, the language of it is more simply. Believing in our PDI Guide tests will help you get the certificate and embrace a bright future. Time and tide wait for no man. Come to buy our test engine.

Salesforce Platform Developer I (PDI) Sample Questions (Q90-Q95):

NEW QUESTION # 90

Universal Container(UC) wants to lower its shipping cost while making the shipping process more efficient.

The Distribution Officer advises UC to implement global addresses to allow multiple Accounts to share a default pickup address.

The Developer is tasked to create the supporting object and relationship for this business requirement and uses the Setup Menu to create a custom object called "Global Address". Which field should the developer add to create the most efficient model that supports the business need?

- A. Add a Master-Detail field on the Global Address object to the Account object.
- B. Add a Lookup field on the Account object to the Global Address object.
- C. Add a Lookup field on the Global Address object to the Account object
- D. Add a Master-Detail field on the Account object to the Global Address object

Answer: A

NEW QUESTION # 91

Which code should be used to update an existing Visualforce page that uses standard Visualforce components so that the page matches the look and feel of Lightning Experience?

- A. `apex:actionStatus`
- B. `<apex:page>`
- C. `<apex:page lightningStyleSheets="true">`
- D. `<apex:commandButton styleClass="slds-vf-button_brand" value="Refresh the Page">`

Answer: C

NEW QUESTION # 92

A developer must perform a complex SOQL query that joins two objects in a Lightning component.

How can the Lightning component execute the query?

- A. Use the Salesforce Streaming APL to perform the SOQL query.
- B. Invoke an Apex class with the method annotated as `@AuraEnabled` to perform the query.
- C. Create a flow to execute the query and invoke from the Lightning component.
- D. Write the query in a custom Lightning web component wrapper and invoke from the Lightning component.

Answer: B

Explanation:

* The Lightning component cannot directly perform SOQL queries.

* An Apex class annotated with `@AuraEnabled` provides server-side logic that can execute the SOQL query and return the data to the Lightning component.

NEW QUESTION # 93

An Opportunity needs to have an amount rolled up from a custom object that is not in a master-detail relationship.

How can this be achieved?

- A. Use the Metadata API to create real-time roll-up summaries,
- B. Write a trigger on the child object and use an aggregate function to sum the amount for all related child objects under the Opportunity.
- C. Use the Streaming API to create real-time roll-up summaries.

- D. Write a trigger on the Opportunity object and use tree sorting to sum the amount for all related child objects under the Opportunity.

Answer: B

Explanation:

When an Opportunity needs to have an amount rolled up from a custom object that is not in a master-detail relationship, the best approach is to:

Option B: Write a trigger on the child object and use an aggregate function to sum the amount for all related child objects under the Opportunity.

Roll-Up Summary Fields Limitation: Roll-up summary fields can only be created on master-detail relationships. Since the custom object is in a lookup relationship with Opportunity (not master-detail), roll-up summary fields are not available.

"Roll-up summary fields can only be created on master-detail relationships."

- Salesforce Help: Define Roll-Up Summary Fields

Trigger on Child Object: Writing a trigger on the child object (the custom object) allows you to execute logic whenever a child record is inserted, updated, or deleted.

Aggregate Function: Within the trigger, you can use SOQL aggregate functions (like SUM()) to calculate the total amount of all child records related to the Opportunity and update the parent Opportunity record accordingly.

```
trigger ChildObjectTrigger on ChildObject__c (after insert, after update, after delete, after undelete) { Set<Id> oppIds = new Set<Id>(); if(Trigger.isInsert || Trigger.isUpdate || Trigger.isUndelete){ for(ChildObject__c child : Trigger.new){ oppIds.add(child.Opportunity__c);
```

```
}
}
```

```
if(Trigger.isDelete){
for(ChildObject__c child : Trigger.old){
oppIds.add(child.Opportunity__c);
}
}
}
```

```
List<Opportunity> oppsToUpdate = new List<Opportunity>();
```

```
for(Id oppId : oppIds){
```

```
Decimal totalAmount = [SELECT SUM(Amount__c) FROM ChildObject__c WHERE Opportunity__c = :oppId]; Opportunity opp = new Opportunity(Id = oppId, Total_Child_Amount__c = totalAmount); oppsToUpdate.add(opp);
```

```
}
```

```
update oppsToUpdate;
```

```
}
```

Why Other Options Are Incorrect:

Option A: Use the Streaming API to create real-time roll-up summaries.

The Streaming API is designed for receiving notifications of data changes in Salesforce and is not suitable for calculating roll-up summaries.

"The Streaming API enables streaming of events using push technology and provides a subscription mechanism for receiving events in near real time."

- Salesforce Developer Guide: Streaming API

Option C: Use the Metadata API to create real-time roll-up summaries.

The Metadata API is used for deploying and retrieving metadata (like custom fields, layouts) between orgs and does not perform data calculations.

"Use Metadata API to retrieve, deploy, create, update, or delete customization information, such as custom object definitions and page layouts, for your org."

- Salesforce Developer Guide: Metadata API

Option D: Write a trigger on the Opportunity object and use tree sorting to sum the amount for all related child objects under the Opportunity.

Writing a trigger on the Opportunity object would not effectively capture changes made to child records, as triggers on the parent do not fire when child records are modified.

Tree sorting is not a standard technique in Apex for summing related records.

Conclusion:

Writing a trigger on the child object is the most effective way to sum amounts from child records and update the parent Opportunity when a master-detail relationship is not present.

NEW QUESTION # 94

Which statement generates a list of Leads and Contacts that have a field with the phrase 'ACME'?

- A.

```
List<List<SObject>> searchList = [FIND 'ACME' IN ALL FIELDS RETURNING Contact, Lead];
```
- B.

```
List<List<SObject>> searchList = [FIND 'ACME' IN ALL FIELDS RETURNING Contact, Lead];
```
- C.

```
List<List<SObject>> searchList = [FIND 'ACME' IN ALL FIELDS RETURNING Contact, Lead WHERE Name Like 'ACME'];
```
- D.

```
Map<SObject> searchList = [FIND 'ACME' IN ALL FIELDS RETURNING Contact, Lead];
```

Answer: B

Explanation:

* Correct Syntax for SOSL Query:

* Option B uses SOSL (Salesforce Object Search Language) to find records where the phrase 'ACME' appears in any field across multiple objects (Contact and Lead).

* Syntax used in Option B:

List<List<SObject>> searchList = [FIND 'ACME' IN ALL FIELDS RETURNING Contact, Lead];

* This query retrieves a list of SObject lists, where each inner list contains the results for a specific object (e.g., Contact or Lead).

* Why not the other options?

* A. Option A:

* This uses SOQL (Salesforce Object Query Language), not SOSL. SOQL cannot search across multiple objects or fields. The syntax provided is invalid because SOQL doesn't support "multi-object WHERE conditions."

* C. Option C:

* The Map<SObject> syntax is incorrect for SOSL queries. SOSL queries return a List<List<SObject>>, not a Map<SObject>.

* D. Option D:

* The syntax List<SObject> for SOSL is incorrect. SOSL must return List<List<SObject>> since the results are grouped by object types.

References:

* SOSL Queries in Apex

* SOQL vs SOSL

NEW QUESTION # 95

.....

The PDI practice exam we offered is designed with the real questions that will help you in enhancing your knowledge about the PDI certification exam. Our online test engine will improve your ability to solve the difficulty of PDI Real Questions and get used to the atmosphere of the formal test. Our experts created the valid PDI study guide for most of candidates to help them get good result with less time and money.
