Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which of the following practices help in preserving the physical integrity of digital evidence?

- A. Leaving the evidence exposed to natural light.
- B. Storing the evidence in a cold, damp environment.
- C. Cleaning the evidence using chemical solvents.
- D. Using non-conductive gloves when handling the evidence.

Answer: D

Explanation:

Preserving the physical integrity of digital evidence is essential to prevent contamination or damage. Using non-conductive gloves is one such practice as it prevents the transfer of oils, dirt, or other substances that could potentially damage or alter the evidence. This helps to maintain the integrity of the evidence and ensures that any potential traces or fingerprints left on the evidence are not compromised.

NEW QUESTION # 31

Which encryption method uses two different keys, a public key and a private key?

- A. Hashing
- B. Asymmetric encryption
- C. Symmetric encryption
- D. SSL/TLS

Answer: B

Explanation:

Asymmetric encryption, also known as public-key encryption, uses two different keys: a public key for encryption and a private key for decryption. The public key can be freely distributed, allowing anyone to encrypt messages that only the recipient with the corresponding private key can decrypt. This method is commonly used for secure communication and establishing secure connections.

NEW QUESTION # 32

Which of the following best describes a vulnerability in the context of cybersecurity?

- A. A tool used to test the security of a network or system.
- B. A method used to attack a network or system.
- C. A weakness in a network or system that can be exploited by attackers.
- D. A security feature implemented to protect a network or system.

Answer: C

Explanation:

A vulnerability refers to a weakness in a network or system that can be exploited by attackers. It can be a flaw or an oversight in the design, implementation, or configuration of a system, which may allow unauthorized access, data leakage, or other malicious activities.

NEW QUESTION # 33

Which of the following is an important aspect of ensuring that endpoint systems meet security policies and standards?

- A. Conducting periodic software audits
- B. Enforcing strong password policies
- C. Implementing software firewalls
- D. Regularly updating firmware

Answer: B

Explanation:

Enforcing strong password policies is an important aspect of ensuring that endpoint systems meet security policies and standards. Strong passwords help prevent unauthorized access to the system and protect sensitive information. While firmware updates, software firewalls, and software audits are also important for overall cybersecurity, enforcing strong password policies directly relates to the security of endpoints and their compliance with policies and standards.

NEW QUESTION # 34

What is the primary reason for implementing multi-factor authentication in a cloud environment?

- A. To provide an additional layer of security
- B. To reduce costs
- C. To simplify the authentication process
- D. To improve performance

Answer: A

Explanation:

Option 1: Correct. Implementing multi-factor authentication provides an additional layer of security by requiring users to provide multiple forms of authentication to access cloud resources.

Option 2: Incorrect. The primary reason for implementing multi-factor authentication is to provide an additional layer of security, not to simplify the authentication process.

Option 3: Incorrect. The primary reason for implementing multi-factor authentication is to provide an additional layer of security, not to reduce costs.

Option 4: Incorrect. The primary reason for implementing multi-factor authentication is to provide an additional layer of security, not to improve performance.
