### NVIDIA-Certified Professional AI Networking Sample Questions (Q72-Q77):

#### NEW QUESTION # 72

You suspect there might be connectivity issues in your InfiniBand fabric and need to perform a comprehensive check. Which tool should you use to run a full fabric diagnostic and generate a report?

- A. perfquery
- B. tapping
- C. ibnetdiscover
- D. **ibdiagnet**

**Answer: D**

Explanation:

The ibdiagnet utility is a fundamental tool for InfiniBand fabric discovery, error detection, and diagnostics. It provides comprehensive reports on the fabric's health, including error reporting, switch and Host Channel Adapter (HCA) configuration dumps, various counters reported by the switches and HCAs, and parameters of devices such as switch fans, power supply units, cables, and PCI lanes. Additionally, ibdiagnet performs validation for Unicast Routing, Adaptive Routing, and Multicast Routing to ensure correctness and a credit- loop-free routing environment.

Reference Extracts from NVIDIA Documentation:

\* "The ibdiagnet utility is one of the basic tools for InfiniBand fabric discovery, error detection and diagnostic. The output files of the ibdiagnet include error reporting, switch and HCA configuration dumps, various counters reported by the switches and the HCAs."

\* "ibdiagnet also performs Unicast Routing, Adaptive Routing and Multicast Routing validation for correctness and credit-loop free routing."

#### NEW QUESTION # 73

You are optimizing an InfiniBand network for AI workloads that require low-latency and high-throughput data transfers. Which feature of InfiniBand networks minimizes CPU overhead during data transfers?

- A. PKey
- B. **Direct Memory Access (DMA)**
- C. SHARP
- D. TCP/IP Offloading

**Answer: B**

Explanation:

Direct Memory Access (DMA) in InfiniBand networks allows data to be transferred directly between the memory of two devices without involving the CPU. This capability significantly reduces CPU overhead, lowers latency, and increases throughput, making it ideal for AI workloads that demand efficient data transfers.

#### NEW QUESTION # 74

Which of the following statements are true about AI workloads and adaptive routing?

Pick the 2 correct responses below.

- A. Flow-based load balancing mechanisms increase congestion risk.
- B. ECMP-based load balancing works best for AI workloads.
- C. AI workloads have very high entropy that helps spread traffic evenly without congestion.
- D. AI workloads are made of a small number of volumetric flows called elephant flows.

**Answer: A,D**

Explanation:

AI workloads, particularly in large-scale training scenarios, are characterized by a small number of high-bandwidth, long-lived flows known as "elephant flows." These flows can dominate network traffic and are prone to causing congestion if not managed effectively. Traditional flow-based load balancing mechanisms, such as Equal-Cost Multipath (ECMP), distribute traffic based on flow hashes. However, in AI workloads with low entropy (i.e., limited variability in flow characteristics), ECMP can lead to uneven traffic distribution and congestion on certain paths.

Adaptive routing techniques, which dynamically adjust paths based on real-time network conditions, are more effective in managing AI traffic patterns and mitigating congestion risks.

### NEW QUESTION # 75

In order to configure RoCE on a Cumulus switch, which command should be used?

- A. nv set roce qos enable on
- B. nv roce qos enable on
- C. nv set qos roce enable on
- D. nv qos roce enable on

**Answer: C**

Explanation:

To enable RDMA over Converged Ethernet (RoCE) on a Cumulus switch, the correct command is:

nv set qos roce enable on

This command configures the Quality of Service (QoS) settings to support RoCE, ensuring that the necessary parameters for lossless Ethernet are applied.

### NEW QUESTION # 76

In which mode of the BlueField DPU does the ARM system on the DPU control the NIC data path, but allow access to the DPU OS from the host?

- A. Restricted mode
- B. NIC mode
- C. Separated Host mode
- D. DPU mode

**Answer: D**

Explanation:

In DPU Mode, the ARM cores on Blue Field own the NIC data path, while still allowing the host system to access the DPU OS (via OOB or virtio).
