		0.25
		X2
		=0.5

To do this you just need to pass the Network Appliance NS0-521 certification exam. Are you ready to accept this challenge? Looking for the proven and easiest way to crack the Network Appliance NS0-521 certification exam? If your answer is yes then you do not need to go anywhere. Just download NS0-521 exam practice questions and start Implementation Engineer - SAN ONTAP Exam (NS0-521) exam preparation without wasting further time. The ITPassLeader Network Appliance NS0-521 Dumps will provide you with everything that you need to learn, prepare and pass the challenging NS0-521 exam with flying colors. You must try ITPassLeader Network Appliance NS0-521 exam questions today.

Network Appliance NS0-521 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Storage Virtualization and Automation: This section explores the benefits of storage virtualization and implements automation techniques to streamline storage management and improve operational efficiency.
Topic 2	<ul style="list-style-type: none"> ONTAP System Configuration: This domain covers the skills to configure and optimize ONTAP systems, including cluster creation, node management, and data protection strategies.
Topic 3	<ul style="list-style-type: none"> ONTAP Upgrade and Migration: In this section, the focus is on the expertise in upgrading and migrating ONTAP systems, including planning, data migration strategies, and ensuring seamless transitions.

Topic 4	<ul style="list-style-type: none"> • ONTAP Troubleshooting and Monitoring: This section of the exam covers skills to troubleshoot ONTAP issues effectively and utilize monitoring tools for proactive system management.
Topic 5	<ul style="list-style-type: none"> • Storage Performance Optimization: In this section, the focus is on how to discover the art of optimizing storage performance through effective workload management, caching strategies, and system tuning for demanding applications.
Topic 6	<ul style="list-style-type: none"> • Storage Security and Compliance: This section of the exam covers data security with access controls, encryption techniques, and compliance with regulatory standards, maintaining the integrity and confidentiality of stored data.

How Can ITPassLeader NS0-521 Practice Questions be Helpful in Exam Preparation?

As a responsible company, we don't ignore customers after the deal, but will keep an eye on your exam situation. Although we can assure you the passing rate of our NS0-521 training guide nearly 100 %, we can also offer you a full refund if you still have concerns. So you have nothing to worry about, only to study with our NS0-521 Exam Questions with full attention. And as we have been in this career for over ten years, our NS0-521 learning materials have become famous as a pass guarantee.

Network Appliance Implementation Engineer - SAN ONTAP Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

What are two benefits of implementing VLANs for NVMe/TCP configurations? (Choose two.)

- **A. Increased security**
- B. Reduced number of broadcast domains
- **C. Increased resiliency**
- D. Reduced number of IPspaces

Answer: A,C

Explanation:

Implementing VLANs for NVMe/TCP configurations provides several benefits, two of which are increased resiliency and increased security:

- * **Increased Resiliency:** VLANs help segment the network traffic, reducing the risk of a single point of failure. By isolating NVMe/TCP traffic into specific VLANs, network issues can be contained within a VLAN, preventing them from affecting other parts of the network. This isolation ensures that disruptions are minimized and network resiliency is enhanced.
- * **Increased Security:** VLANs provide an added layer of security by segregating traffic. This segregation ensures that NVMe/TCP traffic is isolated from other types of traffic, reducing the risk of unauthorized access or data breaches. VLANs help in enforcing stricter access controls and monitoring, thereby increasing the overall security of the network.

For more information on the benefits of VLANs in NVMe/TCP configurations, you can refer to NetApp's technical resources:

- * **Implementing and Configuring Modern SANs with NVMe-oF (NetApp).**
- * **SAN Configuration Best Practices (NetApp Community).**

NEW QUESTION # 14

An administrator configured an SVM with LUNs with two WWPNs per node. The administrator accidentally created a WWPN on node1 that needs to move to node2. The SAN hosts use ALUA.

Based on this requirement, what must be taken offline to correct the situation?

- A. Volume
- B. LUN
- **C. LIF**

- D. SVM

Answer: C

Explanation:

To move a WWPN from node1 to node2 in a NetApp ONTAP SAN environment where ALUA is used, you must take the Logical Interface (LIF) offline. Modifying LIFs involves changing their assignment between nodes, which requires them to be temporarily offline. This ensures that the path states are correctly updated without causing disruption to the SAN hosts.

For more details, see:

- * NetApp Community on Moving LIFs
- * NetApp Documentation on SAN LIFs

NEW QUESTION # 15

During maintenance of a NetApp AFF ONTAP cluster, which two steps are needed to move the SAN UFs to new nodes that are members of a portset? (Choose two.)

- A. Disable the SLM feature for the node that hosts the LIF.
- B. Take the SAN LIF offline.
- C. Remove the LIF from the portset.
- D. Disable the zoning of the LIF WWPN.

Answer: B,C

NEW QUESTION # 16

What should an administrator use to protect an Oracle RAC Automatic Storage Management (ASM) instance to ensure automated restores?

- A. NetApp SnapCenter plugin
- B. Availability groups
- C. Consistency groups
- D. CLI snapshots and clones

Answer: A

Explanation:

To protect an Oracle RAC Automatic Storage Management (ASM) instance and ensure automated restores, the recommended tool is the NetApp SnapCenter plugin. SnapCenter provides comprehensive backup, restore, and clone capabilities for Oracle databases, including those using ASM. It integrates tightly with Oracle RAC environments and automates the entire data protection process, ensuring that backups are consistent and restores are efficient and reliable.

For more details, refer to:

- * NetApp Documentation on SnapCenter for Oracle (NetApp).
- * NetApp TR-4964: Oracle Database Backup, Restore, and Clone (NetApp).

NEW QUESTION # 17

An administrator needs to configure Foreign LUN Import on a NetApp HA pair to migrate over FCP LUNs from a third-party array while serving other LUNs.

Which two actions are required to complete this task? (Choose two.)

- A. Reboot the third-party array to prepare for the LUN import.
- B. Convert all FC ports on each controller to an FC initiator port.
- C. Convert a single FC port on each controller to an FC initiator port.
- D. Create zoning from the third-party array to the cluster.

Answer: C,D

Explanation:

To configure Foreign LUN Import (FLI) on a NetApp HA pair to migrate over FCP LUNs from a third-party array while serving other LUNs, the following actions are required:

* Create zoning from the third-party array to the cluster: Proper zoning ensures that the NetApp cluster can communicate with the third-party storage array.

NEW QUESTION # 18

You must believe that you have extraordinary ability to work and have an international certificate to prove your inner strength. You will definitely be the best one among your colleagues. The help you provide with our NS0-521 Learning Materials is definitely what you really need. And if you study with our NS0-521 exam braindumps, you will know your dream clearly. Join NS0-521 study guide and you will be the best person!
