## High Pass-Rate Exam AB-730 Pattern bring you Trusted Reliable AB-730 Braindumps Free for Microsoft AI Business Professional

It is well known that certificates are not versatile, but without a AB-730 certification you are a little inferior to the same competitors in many ways. Compared with the people who have the same experience, you will have the different result and treatment if you have a AB-730 Certification. Without doubt, you will get a higher salary if you have a AB-730 certification or you can enter into a bigger company. And our AB-730 exam materials can make your dream come true.

## Microsoft AI Business Professional Sample Questions (Q102-Q107):

### NEW QUESTION # 102

You plan to summarize a proposal for a partnership between your company and another company.

You need to use Microsoft 365 Copilot to summarize the information in the proposal as a bulleted list of three to five key points for a project kickoff meeting. Each bullet point must be concise and simply worded.

Which two details should you include in the prompt? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. profiles of both companies generated by using the Researcher agent
- B. a list of contact details for key stakeholders of the partnership
- C. concise instructions for what to do with the proposal
- D. a specific knowledge source to ground the response

**Answer: A,D**

Explanation:

[B]

Using the Researcher agent in Microsoft 365 Copilot is an effective way to generate concise, tailored company profiles (including key data like industry, size, and recent news) to include in a project proposal summary.

For a project kickoff, the Researcher agent can analyze internal documents, web sources, and emails to provide a structured report that helps ensure all stakeholders are aligned.

[C]

To get the most accurate and "grounded" summary for your project kickoff, you should prompt Microsoft 365 Copilot to use Graph-grounded data (often referred to as your Organization's Data or Tenant Data).

Specifically, if you want Copilot to pull in official company profiles and project context, you should reference the Microsoft Graph by using the "forward slash" (/) command to link specific files or by asking Copilot to search internal SharePoint/OneDrive resources.

Why this works

The Microsoft Graph: This is the "brain" that connects your emails, files, meetings, and chats. By grounding the prompt here, Copilot looks at your specific version of the company history rather than what is on the general internet.

Verification: Copilot will provide citations (small numbers next to the text). You can click these to see exactly which document the company profile information came from, ensuring it's the "official" version.

### NEW QUESTION # 103

A colleague from another company shares a link to a prompt.

When you select the link, you receive the following response: "Prompt not found. Sorry, it looks like the prompt is no longer available." What is a possible cause of the response?

- A. The prompt is outside of your organization.
- B. The prompt is outdated.
- C. The prompt contains a file that has a sensitivity label applied.
- D. The prompt contains a reference to a file that you do NOT have access to.
- E. The prompt is a scheduled prompt.

**Answer: A**

Explanation:

Microsoft 365 Copilot operates within the security, compliance, and identity boundaries of a Microsoft 365 tenant. Shared prompts, prompt links, and Copilot artifacts are governed by organizational access controls and tenant isolation. If a prompt is created and shared from outside your organization, cross-tenant access may not be supported depending on the sharing configuration and administrative policies.

When a user attempts to open a prompt that resides in another organization's tenant without proper cross-tenant sharing permissions, Copilot cannot locate or validate the resource within the user's own environment.

As a result, the system displays a "Prompt not found" message.

Option B would typically result in an access or permissions error rather than the prompt being unavailable entirely. Sensitivity labels

and scheduled prompts do not inherently cause a "not found" error. Therefore, the most likely cause is that the prompt exists outside your organization's tenant boundary and is not accessible to you.

#### NEW QUESTION # 104

What is the role of machine learning in a business environment?

- A. To provide insights from data and predict outcomes
- B. To manually perform data analysis
- C. To automate all business processes without human input
- D. To eliminate the need for human judgment in decision-making

**Answer: A**

Explanation:

Machine learning algorithms analyze data to detect patterns, learn from the data, and make predictions or recommendations. This helps businesses make data-driven decisions without human intervention in every aspect, improving accuracy and efficiency.

#### NEW QUESTION # 105

Hotspot Question

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: Yes

Yes - Microsoft 365 Copilot uses contextual information from your organization to suggest prompts.

Microsoft 365 Copilot leverages contextual information from your organization to suggest relevant prompts, a process aimed at improving productivity by reducing the need to search for information. This feature, often enhanced by Context IQ, scans your recent activity--including emails, calendar meetings, chats, and documents--to provide personalized, tailored suggestions.

Box 2: No

No - Microsoft 365 Copilot can use contextual information from your organization to train the large language model (LLM).

How Microsoft 365 Copilot actually uses organizational data:

\*-> No Training on Customer Data: Customer data, including prompts, responses, and data accessed through Microsoft Graph (emails, chats, documents, etc.), is not used to train the underlying foundation LLMs that power Copilot.

Grounding (Contextual Use): Copilot uses organizational context to "ground" responses. It retrieves relevant data in real-time via Microsoft Graph to ensure answers are accurate and tailored to your organization.

Box 3: Yes

Yes - Microsoft 365 Copilot uses contextual information from your organization to suggest augment a prompt, before sending the prompt to the large language model (LLM).

It uses a process called grounding to improve the relevance and accuracy of its responses by connecting to your organization's data via the Microsoft Graph.

Instead of just relying on the general knowledge of a Large Language Model (LLM), Copilot acts as an intermediary, augmenting your prompt with real-time organizational context before the LLM processes it.

#### NEW QUESTION # 106

You run a saved prompt and receive the following response:

"You asked for a summary of File.docx. However, the file appears to be either empty, corrupted, or in a format that I cannot process." What is a possible cause of the response?

- A. You used the wrong agent to run the prompt.
- B. You do NOT have access to the file.
- C. You did NOT schedule the prompt to run.
- D. You ran the prompt from a web app instead of a desktop app.

**Answer: B**

### Explanation:

Comprehensive and Detailed 150 to 200 words of Explanation Microsoft AI Business professional documents:

When Microsoft 365 Copilot cannot access a referenced file, it may return a message indicating that the file is empty, corrupted, or cannot be processed. In many cases, this message appears when the user does not have sufficient permissions to open the file in SharePoint, OneDrive, or another Microsoft 365 location.

Copilot operates within the Microsoft Graph security boundary and strictly respects user permissions. If a saved prompt references File.docx but the user no longer has access to it—due to permission changes, file relocation, or removal—Copilot cannot retrieve the content for grounding. As a result, it cannot analyze or summarize the file and returns a processing-related error.

Not scheduling the prompt is unrelated to file processing. Running from a web or desktop app does not affect file readability. Using a different agent does not typically cause a file-format processing error.

Therefore, the most likely cause is that you do not have access to the file.

### NEW QUESTION # 107

.....

Our company Pass4guide abides by the industry norm all the time. By virtue of the help from professional experts, who are conversant with the regular exam questions of our latest AB-730 real dumps. They can satisfy your knowledge-thirsty minds. And our AB-730 Exam Quiz is quality guaranteed. By devoting ourselves to providing high-quality AB-730 practice materials to our customers all these years we can guarantee all content is of the essential part to practice and remember.
