## NREMT EMT Intereactive Testing Engine & Test EMT Objectives Pdf

The EMT certification exam is one of the top-rated career advancement certifications in the market. This EMT exam dumps have been inspiring beginners and experienced professionals since its beginning. There are several personal and professional benefits that you can gain after passing the Emergency Medical Technicians Exam (EMT) exam.

## There is the cost of Test Prep EMT Exam

- The Test Prep EMT Exam is \$80.

## There is a salary of Test Prep EMT Professional

The Average Salary of a Test Prep EMT Expert in

- Europe - 31358 EURO
- England - 27504 POUND
- India - 2606432 INR
- United State - 34320 USD

## NREMT Emergency Medical Technicians Exam Sample Questions (Q17-Q22):

### NEW QUESTION # 17

When using the SALT method for triage, which of the following interventions should the EMT perform during the individual assessment step?

- A. Completing first responder scorecards to track patients
- **B. Assessing respirations, administering two rescue breaths, and assessing patient mentation**
- C. Bleeding control, opening the airway, and administering two rescue breaths for pediatric patients
- D. Insertion of airway adjuncts, bleeding control, and moving patients to the triage area

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

SALT(Sort, Assess, Lifesaving interventions, Treatment/Transport) is a mass casualty triage method recommended by the CDC and the National Association of EMS Physicians (NAEMSP). During the "Assess" step, responders:

\* Check respirations

\* Provide lifesaving interventions such as rescue breaths if the patient is not breathing but has a pulse

\* Evaluate mentation (e.g., ability to follow commands)

Airway adjuncts and full transport do not happen at this stage. Scorecards and pediatric-specific modifications are addressed later in the protocol.

National EMS Education Standards - Disaster Response

### NEW QUESTION # 18

A 44-year-old patient with diabetes feels weak and dizzy. The EMT provides oral glucose and transports the patient to the hospital, where the patient recovers. The EMT tells their partner they did not provide the patient with a blanket because they felt the patient was wasting their time. What best describes the action the EMT took?

- A. Battery
- B. Breach of duty
- **C. Negligence**
- D. Breach of ethics

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Negligence occurs when an EMT:

\* Has a duty to act

\* Breaches that duty (e.g., by withholding basic care like warmth)

\* Causes harm or risk of harm

\* Establishes causation

The EMT's failure to treat the patient with respect and dignity - even if the patient improved - still constitutes negligence, especially if tied to a discriminatory or dismissive attitude.

Brady Emergency Care (13th ed.), Chapter: Legal and Ethical Responsibilities

### NEW QUESTION # 19

A 30-year-old patient has a stab wound to the left forearm that is bleeding profusely. Which of the following interventions should the EMT perform first?

- A. Assess the airway
- B. Determine severity of wound
- C. Place a tourniquet
- D. Apply direct pressure

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The first step in hemorrhage control for external bleeding is always direct pressure using gloved hands or dressing. Only if this fails or the bleeding is severe and life-threatening (especially from extremities) should a tourniquet be applied.

Assessing the airway is critical in overall trauma care but not the first priority in isolated extremity hemorrhage. Severity assessment is secondary to bleeding control.

### NEW QUESTION # 20

A 3-year-old patient ingested laundry detergent. The patient is drowsy and has crackles in all lung fields. What should most concern the EMT at this time? Select the three answer options that are correct.

- A. Seizure
- B. Hypoglycemia
- C. Esophageal perforation
- D. Acid reflux
- E. Vomiting
- F. Respiratory failure

**Answer: C,E,F**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Laundry detergent ingestion - especially in the case of liquid detergent pods - is associated with caustic airway and gastrointestinal injuries. The presence of crackles and drowsiness are signs of aspiration and possible respiratory failure. Vomiting increases the risk of aspiration pneumonia, and esophageal perforation is a life-threatening complication from corrosive ingestion.

While seizure and hypoglycemia are possible complications of toxic ingestion, they are not as immediately linked to the detergent profile as airway injury and aspiration risk.

### NEW QUESTION # 21

Which of the following is the most reliable indicator of effective respiration in a patient?

- A. Pulse oximetry reading
- B. Respiratory rate
- **C. Mental status**
- D. Skin color

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Mental status reflects perfusion and oxygen delivery to the brain, which is highly sensitive to hypoxia and hypercapnia. Even if respiratory rate and SpO<sub>2</sub> are normal, altered mental status suggests ineffective gas exchange or hypoperfusion.

Pulse oximetry may be falsely normal in CO poisoning or poor perfusion. Skin color is subjective and not as sensitive or specific as neurological status.
