□

Answer:

Explanation:

□

NEW QUESTION # 97

What is the primary difference between AAA authentication and authorization?

- A. Authentication identifies and verifies a user who is attempting to access a system, and authorization controls the tasks the user can perform.
- B. Authentication identifies a user who is attempting to access a system, and authorization validates the user's password.
- C. Authentication verifies a username and password, and authorization handles the communication between the authentication agent and the user database.
- D. Authentication controls the system processes a user can access, and authorization logs the activities the user initiates.

Answer: A

Explanation:

Section: Security Fundamentals

Explanation:

AAA stands for Authentication, Authorization and Accounting.

* Authentication: Specify who you are (usually via login username & password)

* Authorization: Specify what actions you can do, what resource you can access

* Accounting: Monitor what you do, how long you do it (can be used for billing and auditing) An example of AAA is shown below:

- Authentication: "I am a normal user. My username/password is user_tom/learnforever"

- Authorization: "user_tom can access LearnCCNA server via HTTP and FTP"

- Accounting: "user_tom accessed LearnCCNA server for 2 hours". This user only uses "show" commands.

NEW QUESTION # 98

Refer to the exhibit.

□

Host A switch interface is configured in VLAN 2. Host D sends a unicast packet destined for the IP address of host A.

□

What does the switch do when it receives the frame from host D?

- A. It shuts down the source port and places It In err-disable mode.
- B. It drops the frame from the MAC table of the switch.
- C. It creates a broadcast storm.
- D. It floods the frame out of every port except the source port.

Answer: A
